These flash cards were developed with the aim of helping health profession students prepare for a practical exam in a typical medical gross anatomy and/or neuroanatomy course. The images on these cards are photographs of cadaver dissections. The front of each card typically has structures to identify. The correct answers are identified on the back of the card including details about important anatomical characteristics of that structure. Also, material was added that will be useful in preparation for the "written" component of the gross anatomy exams.
