Centrist Liberalism

Triumphant, 1789-1914

Routledge

Immanuel Wallerstein's highly influential, multi-volume opus, *The Modern World-System*, is one of this century's greatest works of social science. An innovative, panoramic reinterpretation of global history, it traces the emergence and development of the modern world from the sixteenth to the twentieth century. This new volume encompasses the nineteenth century from the revolutionary era of 1789 to the First World War. In this crucial period, three great ideologies—conservatism, liberalism, and radicalism—emerged in response to the worldwide cultural transformation that came about when the French Revolution legitimized the sovereignty of the people. Wallerstein tells how capitalists, and Great Britain, brought relative order to the world and how liberalism triumphed as the dominant ideology.

The Modern World-System I Palgrave Macmillan

Immanuel Wallerstein develops a thorough-going critique of the legacy of nineteenth-century social science for social thought in the new millennium. We have to "unthink"-radically revise and discard many of the presumptions that still remain the foundation of dominant perspectives today. Once considered liberating, these notions are now barriers to a clear understanding of our social world. They include, for example, ideas built into the concept of "development." In place of such a notion, Wallerstein stresses transformations in time and space. Geography and chronology should not be regarded as external influences upon social transformations but crucial to what such transformation actually is. *Unthinking Social Science* applies the ideas thus elaborated to a variety of theoretical areas and historical problems.  Key figures who have made leading contributions to the development of international theory provide a major survey of the state of the subject. [The Age of Transition](#)

SUNY Press

"The authors combine an excellent state-of-the-art review of the literature in world-systems analysis with a vigorous presentation of their own quite coherent views. This book is a major contribution to our collective dialogue on the past and the future."

—Immanuel Wallerstein
 Binghamton University, author of *The Modern World-System* "An up-to-date and synthetic overview of current world-systems research. The authors draw on diverse literatures from political science to archaeology, from contemporary policy issues to Native American studies, and from history to sociology. This thoughtful volume serves as both a provocative summary of ongoing scholarship and a fertile foundation for future cross-disciplinary dialogue." —Gary M. Feinman
 University of Wisconsin—Madison "To understand the evolution of the world's political economy, we need empirical theories that can handle 'ancient' and 'modern' processes, a longer time frame encompassing multiple millennia, and less concern about trespassing in other people's

disciplines. Chase-Dunn and Hall's new book, *Rise and Demise*, delivers all three with noteworthy style and effect."

—William Thompson
Indiana University "Rise and Demise is a wide ranging and stimulating synthesis of the world-systems approach and its main findings. Its broad coverage of parallel social processes in various regions and time periods convincingly makes the argument that world-systems theory is able to integrate many diverse historical and social science specializations."

—Richard E. Blanton
Purdue University
Positivism and Beyond
Temple University Press
This book renders an uncompromising verdict on the 'scourge' of our millennium: modernism, itself the artifact of certain late Eurocentric propensities. Kanth argues that while modernism is possessed of some virtues, they are purchased at far too high a cost - indeed a cost that neither the species nor the planet can, on any scale, find affordable. Given the imminence and the gravity of this threat, he further suggests that no other posture is at all ecologically responsible. Kanth suggests, breaking

with the manifold paradigms of European expansionism or find ourselves, soon enough, living on a planet damaged beyond recovery.

The United States Confronts the World
Oxford University Press
For Marxists, imperialism is the highest stage of capitalism. Critical analysis of imperialism has been a feature of Marxist thought throughout the twentieth century. The conceptualising and theorising of imperialism by Marxists has evolved over time in response to developments in the global capitalist economy and in international politics. Murray Noonan here provides the first complete analysis of Marxist theories of imperialism in over two decades. Presenting three phases of imperialist theories, he analyses and compares 'Classical', 'Neo' and 'Globalisation-era' Marxist theories of imperialism. The book moves chronologically, tracking the origins of imperialism theorised by J.A. Hobson at the beginning of the twentieth

century up to the present day. He critically identifies and engages with a new 'Globalisation-era' phase of Marxist imperialism theory. Through a detailed scholarly analysis of the history and evolution of these theories, Noonan offers vital new perspectives on imperialist theory and its relevance and application in the twenty-first century.

This book examines three important, interconnected themes that link Africa and the capitalist world-system of the last 500 years. If Africa will play a significant role in resolving the structural crisis of the modern world-system, it is crucial there continue to be a well-informed and

intellectually relevant debate about the issues involved.

Unthinking Social

Science Univ of California Press

This work draws upon the full range of Wallerstein's social scientific scholarship, from his research on contemporary African politics, to his study of the modern world-system and essays on the new structures of knowledge emerging from the crisis of the capitalist world-economy. His singular focus on the way in which change in one part of the globe affects the whole is all the more relevant as the world grows increasingly inter-dependant.

The World-System and Africa Univ of California Press

"The Modern World System", Immanuel Wallerstein's influential multivolume reinterpretation of global history, traces the emergence and development of the

modern world from the sixteenth century to the twentieth. -- From publisher's description. *System, Scale, Culture* Bloomsbury Publishing Examines how events in the Cold War and post-Cold War periods shaped the intellectual projects of Perry Anderson and Immanuel Wallerstein. *Contesting the Global Order* explores what it means to be a radical intellectual as political hopes fade. Gregory P. Williams chronicles the evolution of intellectual visionaries Perry Anderson and Immanuel Wallerstein, who despite altered circumstances for radical change, continued to advance creative interpretations of the social world. Wallerstein and Anderson, whose hopes were invested in a more egalitarian future, believed their writings would contribute to socialism, which they anticipated would be a postcapitalist future of relative social, economic, and political equality. However, by the 1980s dreams of socialism had faded and they had to face the reality that socialism was neither close nor inevitable. Their sensitivity to current events, Williams argues,

takes on new significance in this century, when many scholars are grappling with the issue of change in a world of declining state power. Gregory P. Williams is Assistant Professor of Political Science and International Affairs at the University of Northern Colorado.

The Second Era of Great Expansion of the Capitalist World-Economy, 1730s-1840s, With a New Prologue New Press, The

Leading writer Boris Kagarlitsky offers an ambitious account of 1000 years of Russian history. Encompassing all key periods in Russia's dramatic development, the book covers everything from early settlers, through medieval decline, Ivan the Terrible - the 'English Tsar', Peter the Great, the Crimean War and the rise of capitalism, the revolution, the Soviet period, finally ending with the return of capitalism after 1991. Setting Russia within the context of the 'World System', as outlined by Wallerstein, this is a major work of historical Marxist theory that is set to become a future classic.

The Modern World-System IV Cambridge University Press

Analyzes the workings of the system of capitalism and examines the impact of capitalism on economic, social and political conditions. *Alternatives* Routledge Social theorists dwell on the canonical works of Marx, Weber, and Durkheim but little on the theories of the major contemporary macrotheorists. This book fills this gap with a focus on the work of four modern theorists who have taken on the larger questions spawned by classical social theory. C. Wright Mills, Marvin Harris, Immanuel Wallerstein, and Gerhard Lenski have examined such phenomena and processes as the rise and impact of capitalism; the centralization and enlargement of authority; inequality; and the historical intensification of production and populations. Borrowing what is useful from the classics as well as relying on contemporary practitioners and empirical evidence, each theorist adds his own insights and interpretations in constructing a comprehensive perspective of sociocultural stability and change. This book fully

synthesizes and documents each perspective, using language and examples that resonate with the general reader. A short biography on each theorist is also provided. **Toward an Intellectual History of the Postwar Years** Greenwood Publishing Group Seeks to account for changes in the world over the second half of the 20th century and to identify the likely trajectory of global trends over the coming generation. Presents striking evidence not simply that the global system is entering a new era, but that the whole capitalist structure may be approaching a systemic disintegration. *Immanuel Wallerstein and the Problem of the World* Duke University Press Books Written between 1982 and 1989, this collection contains the author's perspective on the events of this period. The book also charts the development of a challenge to the dominant "geoculture": the cultural framework within which the world-system operates. *Macrosociology* Duke University Press World System History is a

component of Encyclopedia of Social Sciences and Humanities in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. The Theme on World System History presents the study of the history of the world system. World system history offers an array of tools with which to apprehend the future. This volume discuss the essential aspects such as World-Systems Analysis; Big History; Epistemology of World System History: Long-Term Processes and Cycles; One World System or Many: The Continuity Thesis in World System History; World Population History; States Systems and Universal Empires; The Silk Road: Afro-Eurasian Connectivity Across the Ages; Dark Ages in World System History; The Kondratieff Waves as Global Social Processes; Globalization in Historical Perspective; Emergence of a Global Polity; World Urbanization: The Role of Settlement Systems in Human Social Evolution; Democratization: The World-Wide Spread Of Democracy in The Modern Age; The Rise of Global Public Opinion; East Asia
