What is Catalysis? Pearson Chemistry Atomic Structure Test Scientists have found what might be the oldest synthetic quasicrystal in the debris of the first-ever atomic bomb test almost 76 years ago. The report brings together two of the strangest phenomena in ... Oldest human-made quasicrystal discovered in remains of first nuclear blast In this collection you will find resources to help you understand atomic structure and the periodic table to support learning in Chemistry for ... down group 1 and 7. Test your knowledge of ... Atomic structure and the periodic table A newly discovered quasicrystal that was created by the first nuclear explosion at Trinity Site, N.M., on July 16, 1945, could someday help scientists better understand illicit nuclear explosions and ... LANL: Discovery of new material could someday aid in nuclear nonproliferation Their crystalline structure allows them to be 'worked' to ... These clips will be relevant for teaching Chemistry at KS3 and GCSE/KS4 in England, Wales and Northern

Ireland and National 4/5 ... Chemistry KS3 & KS4/GCSE: The atomic structure of metal The detonation of the first atomic bomb during the 1945 Trinity Test produced temperatures and pressures so extreme that the surrounding sand fused into a glassy material called trinitite. Physicists ... Rare quasicrystal found in trinitite formed during 1945 Trinity Test This "charge transfer" is highly important in many areas of chemistry ... of observing how a molecule's structure responds to charge movements with the required atomic resolution and on the ... First detailed look at how charge transfer distorts a molecule's structure A team led by MIT reported a new way to switch antiferromagnetism (a type of magnetism in which neighboring electron spins point in opposite directions) on and off in thin films of nickelate—a finding ... Physicists Find a Novel Way to Switch Antiferromagnetism On and Off Engineered nanoparticle achieves highest efficiency of any artificial enzyme when compared with natural peroxidase ... Engineered nanoparticle sets record as it outperforms natural enzyme "He returned to the lab on Monday and continued to run tensile tests of an alloy consisting of aluminium ... These drops have a different atomic structure than the aluminium and make

dislocation ... Why do some alloys become stronger at room temperature? Small interfering RNA (siRNA) is used to regulate gene expression for therapeutic purposes, but the design of stable and efficient siRNA delivery systems is challenging. Here, the authors develop ... Programmably tiling rigidified DNA brick on gold nanoparticle as multi-functional shell for cancer-targeted delivery of siRNAs However, catalysts can't make a match between chemicals if there's no "chemistry." Instead ... who use various techniques to study the atomic structure of catalysts, and theorists, who test and model ...
