*Net Neutrality or Net Neutering: Should
Broadband Internet Services Be Regulated*
Springer Science & Business Media
Focusing on the current trends and
business strategies in this growing field on

both a national and international level and covering such topics as the Ethernet, fiber optics, and the powerline, this volume provides a well-rounded look into the world of broadband communications. This is a remarkable resource that has brought together great industry thinkers and is an important reference tool for executives, educators, and all people belonging to the information industry.

The Global Internet Economy The Stationery Office
Access to broadband can be an unexpectedly emotive and complex subject. Written evidence the Committee has received explains how poor broadband can lead to a range of problems: from reduced access to online learning resources for students, to families being unable to use everyday online services

such as BBC iPlayer and rural businesses being powerless to function in an increasingly online marketplace. Overall, poor broadband can produce a feeling of a two-tier society with the 'have and have nots'. This feeling is most apparent in rural communities which by their geographical nature are often the hardest for the infrastructure to reach. The move to an online-only Common Agricultural Policy (CAP) system for payments this year provides a clear example of how online-only services often need to be accessed by those located in geographical areas which are difficult for current broadband infrastructure to reach or for good coverage and speed to be provided. CAP payments offer a prime example of the wider Government policy to make services 'digital-by-default'. This policy has clear ramifications when broadband access is limited or non-existent.

One of the most popular offerings telecom companies now provide is the triple play, which consists of voice, video, and data, all from one company and with one bill. This book addresses the challenges and

benefits of offering converged services and looks at how the new technology is affecting companies and customers.

India Telecom Monthly Newsletter March 2010 World Bank Publications

Broadband Infrastructure: The Ultimate Guide to Understanding and Delivering OSS/BSS is a "how to" book for Internet infrastructure companies to help them prepare for the decisions they will face when constructing their core OSS strategies and infrastructure. This book provides a source of reference and education to learn the language, methods, and technologies associated with the OSS market. It examines the Internet infrastructure supply chain and how it will be automated. Finally, it brings together a wealth of proven knowledge and advice, gathered from BusinessEdge Solutions' extensive OSS experience, that broadband providers can use to minimize their OSS risks while maximizing their ability to differentiate and compete.

Progress since the Seoul Declaration
National Academies Press

Written by experts in the field, this book provides an overview of all forms of broadband subscriber access networks

and technology, including fiber optics, DSL for phone lines, DOCSIS for coax, power line carrier, and wireless. Each technology is described in depth, with a discussion of key concepts, historical development, and industry standards. The book contains comprehensive coverage of all broadband access technologies, with a section each devoted to fiber-based technologies, non-fiber wired technologies, and wireless technologies. The four co-authors' breadth of knowledge is featured in the chapters comparing the relative strengths, weaknesses, and prognosis for the competing technologies. Key Features:
Covers the physical and medium access layers (OSI Layer 1 and 2), with emphasis on access transmission technology
Compares and contrasts all recent and emerging wired and wireless standards for broadband access in a single reference
Illustrates the technology that is currently being deployed by network providers, and also the technology that has recently been or will soon be standardized for deployment in the coming years, including vectoring, wavelength division multiple access, CDMA, OFDMA, and MIMO
Contains detailed discussion on the

following standards: 10G-EPON, G-PON, XG-PON, VDSL2, DOCSIS 3.0, DOCSIS Protocol over EPON, power line carrier, IEEE 802.11 WLAN/WiFi, UMTS/HSPA, LTE, and LTE-Advanced

Access Technologies for Multimedia Communications Intl. Engineering Consortiu

In the Committee's report on broadband services it considers that the UK and Welsh Governments must work together and use all means available to bring broadband services in Wales up to speed with the rest of the UK, and eradicate broadband "slow spots" and "notspots" as a matter of urgency. Both Governments should consider promoting mobile and satellite technologies, particularly in remote areas of Wales in order to deliver this and not rely solely on rolling out fibre optic cabling. The availability of broadband has been consistently lower in Wales than the rest of the UK and although that gap has narrowed in recent years latest figures show the gap is widening again. The existence of notspots and slowspots has hindered existing businesses and deterred new businesses from choosing to locate to Wales - to the cost of the local

economy. The Welsh Government's target is a commitment to provide all Welsh businesses with access to next-generation broadband by "the middle of 2016". The Committee also says that both Governments must ensure that the roll-out of superfast broadband is not achieved at the expense of delivering a good broadband service for all. The Committee recommends that Ofcom undertake a study to evaluate whether satellite broadband should be supported more vigorously in Wales; the delayed Spectrum auction, now planned for 2013, must ensure that 4G mobile services are available to at least 98% of people in Wales; and Ofcom must continue its efforts to open up access to infrastructure in Wales. BT's market power must be regulated effectively to ensure efficient operation of the market.

Official Gazette of the United States Patent and Trademark Office CRC Press

This book examines the reasons why various groups around the world choose not to adopt broadband services and evaluates strategies to stimulate the demand that will lead to increased broadband use. It introduces readers to

the benefits of higher adoption rates while examining the progress that developed and emerging countries have made in stimulating broadband demand. By relying on concepts such as a supply and demand gap, broadband price elasticity, and demand promotion, this book explains differences between the fixed and mobile broadband demand gap, introducing the notions of substitution and complementarity between both platforms. Building on these concepts, 'Driving Demand for Broadband Networks and Services' offers a set of best practices and recommendations aimed at promoting broadband demand. The broadband demand gap is defined as individuals and households that could buy a broadband subscription because they live in areas served by telecommunications carriers but do not do so because of either economic, limited awareness, or lack of digital literacy reasons. This grouping represents a range from 30% of the population in the US, 40% in Germany, and over 80% in most emerging countries. Research indicates that broadband usage is critical for social development, economic performance, and overall welfare and so it

behoves governments to encourage demand. This study is the first of its kind to address the demand side of broadband diffusion, incorporating an economic analysis while offering real world examples of policies and initiatives that have successfully spurred demand in developed and emerging markets alike. This book is intended for policy makers, managers of telecommunications and other technology companies, as well as academics and graduate students in the areas of public policy, economic development, and technology management. This book is an eye-opener for policy makers. Traditionally ICT policy has focused on the supply side. Katz and Berry develop great ideas to leapfrog Internet penetration from the demand side, where the value of the Internet is. - Diego Molano Vega, Minister of Information Technologies and Communications of Colombia This book is an instant classic. It brilliantly and convincingly lays out the case why dealing with inadequate internet penetration has moved from the creation of supply to one of encouraging demand. It provides an information-rich and well-written presentation of the factors holding back

people from becoming users, and offers a hugely valuable survey of the various programs around the world to make the broadband internet truly useful to people everywhere. It is the kind of book writers in this field will use constantly. - Eli Noam, Professor of Finance and Economics, Columbia Business School This new study by Katz and Berry examines the rationale for national broadband plans and the evidence for their success in driving demand. It presents the latest data on broadband in a range of case study countries, and provides best practice advice for policy-makers and development practitioners. - Dr Tim Kelly, Lead ICT Policy Specialist, World Bank

Bringing Home the Bits Information Gatekeepers Inc
 In the Telecommunications Act of 1996, the Congress said that consumers in ¿rural, insular, and high-cost areas¿ should have access to services and rates that are ¿reasonably comparable¿ to those in urban areas. To implement the 1996 Act, the FCC modified and expanded the high-cost program. The program provides funding to some telecomm. carriers, facilitating lower telephone rates in rural areas. This report reviews: (1) the effect that the program structure has on the level of support and types of services in rural areas; (2) the extent to which FCC has developed performance goals and measures for the program; and (3) the extent to which FCC has implemented internal control mechanisms. Includes recommendations. Charts and tables.

 Designed from the ground up with a constructivist framework, BUILDING TEACHERS: A CONSTRUCTIVIST APPROACH TO INTRODUCING EDUCATION, 2nd Edition helps future teachers create their own understanding of education. As the

authors address the key topics generally covered in an introductory book, they encourage readers to develop their own understandings by connecting their prior knowledge, experiences, and biases with new experiences to which they will be exposed during the course. Highlights of the new edition include stronger standards integration and expanded material on diversity and technology. By interacting with the materials presented, rather than merely memorizing the book's content, readers learn what teaching is all about in an exploratory, inquiring, constructivist-based manner. In turn, they can help the children in their classrooms learn meaningfully. Available with InfoTrac Student Collections

A Foundation for Strong Rural Communities The Stationery Office
Broadband Last Mile: Access Technologies for Multimedia Communications provides in-depth treatments of access technologies and the applications that rely upon them or support them. It examines innovations and enhancements along multiple dimensions in access, with the overarching goal of ensuring that the last

mile is not the weak link in the broadband chain. Written by experts from the academic and commercial segments of the field, the book's self-contained sections address topics related to the disciplines of communications, networking, computing, and signal processing. The core of this treatment contains contemporary reviews of broadband pipes in the classes of copper, cable, fiber, wireless, and satellite. It emphasizes the coexistence of these classes within a network, the importance of optical communications for unprecedented bandwidth, and the flexibility and mobility provided by wireless. The book also includes perspective on the increasingly important topic of network management, providing insights that are true regardless of the nature of the pipe. The text concludes with a discussion of newly emerging applications and broadband services. This book offers an all-in-one treatment of the physical pipes and network architectures that make rich and increasingly personalized applications possible. It serves as a valuable resource for researchers and practitioners working in the increasingly pervasive field of

broadband.

Broadband communication expands our

opportunities for entertainment, e-

commerce and work at home, health care,

education, and even e-government. It can

make the Internet more useful to more

people. But it all hinges on higher capacity

in the "first mile" or "last mile" that

connects the user to the larger

communications network. That connection

is often adequate for large organizations

such as universities or corporations, but

enhanced connections to homes are

needed to reap the full social and

economic promise. Broadband: Bringing

Home the Bits provides a contemporary

snapshot of technologies, strategies, and

policies for improving our communications

and information infrastructure. It explores

the potential benefits of broadband,

existing and projected demand, progress

and failures in deployment, competition in

the broadband industry, and costs and

who pays them. Explanations of

broadband's "alphabet soup" HFC,

DSL, FTTH, and all the rest " are

included as well. The report's finding

and recommendations address regulation,

the roles of communities, needed

research, and other aspects, including

implications for the Telecommunications

Act of 1996.

This book explores the technological challenges and applications of providing fast, "always on" internet connections to the home. Current delivery mechanisms of broadband into and around the home are explored in depth, as well as the current and emerging applications of the technology. The authors discuss what drives people to adopt the technology, how it is being used, the massive potential for the technology, and the home of the future. This fascinating book provides balanced coverage of the issues surrounding this next phase of the Internet that promises to transform our homes and the way we live.

Telecommunications IET

To avoid serious bottlenecks, components of the Internet and of intranets-such as servers, browsers, and the access networks-must be properly designed, implemented, managed, and monitored. Beginning with the basics, Intranet Performance Management sets forth the standards, methods, and tools that can simplify and unify systems and network management, avoid the seemingly

inherent problems associated with them, and contain costs. In this book, world renowned expert Kornel Terplan addresses: Proactive server, browser, and access network monitoring Managing and authoring home page content Traffic management and load balancing in the access networks Reviewing and evaluating usage statistics using log files These tasks-essential to the success of an intranet-

require the active and diligent work of the management team. Effective performance of these tasks allows for the use of inexpensive browsers, facilitates education, and improves Internet culture and scalability.
