How The Internet Works 8th

How the Internet works: A (detailed) overview

The Internet has one very

simple job: to move computerized information (known as data) from one place to another. That's it! The machines that make up the Internet treat all the information they handle in exactly the same way. In this respect, the Internet works a bit like the postal service.

How the internet works - Code The Web

Because the Internet is a global network of computers each computer

connected to the Internet must have a unique address. Internet addresses are in the form nnn.nnn.nnn.nnn where nnn must be a number from 0 - 255. This address is known as an IP address. (IP stands for Internet Protocol; more on this later.)
