The book covers all aspects of eye health in South-East Asia from public health to health system to education to industry in 6 sections. The World Health Organization (WHO) South-East Asia region comprises of 11 countries - Bangladesh, Bhutan, DPR Korea, India, Indonesia, Maldives, Myanmar, Nepal, Sri Lanka, Thailand and Timor-Leste. This region is home to 26% of world population; there is

a disproportionate amount of blindness (30.6%) and visual impairment (36%). This is a first of its kind book that discusses common conditions of visual impairment and blindness in the South-East Asia region. In addition, the book documents the current eye care industry in the region and the contribution of all eye health INGOs in eye care program planning and service delivery for many decades. Majority of the countries in the South-East Asia region are categorized in 'middle-income country' group. This book discusses the common challenges in these countries such as, suboptimal public expenditure in health, acute shortage of skilled eye health workforce, and rudimentary health industry. The book covers the following 6 sections: 1. Geographic description and health indices of the region 2. Health system evolved over years, including universal eye health, health financing and health management information system (HMIS) 3. Common eye problems including non-communicable disease NCD (and diabetic retinopathy), neglected tropical disease NTD (and Trachoma) 4. Health workforce in the region that includes ophthalmologists, optometrists, and allied ophthalmic personnel 5. Eye health support in the region of 13 international non-government organizations (INGOs) working for decades 6. Eye health industry in the region that includes spectacles, ophthalmic devices and equipment and the pharma industry The book would be a useful resource for ophthalmologists, all public health personnel and policy makers in eye health in the South-East Asia region specifically and all ophthalmologists and scientists interested in public health all over the world as well as for program planning to reach the 'Health for All' strategy by 2030 (United Nations Sustainable Development Goal, SDG 2030).

Diabetes has become a worldwide health problem, the global estimated prevalence approaches ten percent and the burden of this disease in terms of morbidity and mortality is unprecedented. The advances acquired through the knowledge of the mechanisms of the disease and the variety of therapeutic approaches contrast with the inability of private and public health systems in underdeveloped and even developed countries to achieve the goals of treatment. This paradox has been described in many sources: the surge of scientific advances contrast with an unprecedented amount of human suffering. Thus, a patient centered and an evidence based approach with the capacity to produce measurable clinical and economic outcomes is required. The purpose of this textbook is multiple: to offer a comprehensive resource covering all aspects of outpatient management; to address diabetes as a health problem from an epidemiological, economic and clinical perspective; to discuss the role of social determinants of health on the worldwide increase in diabetes; to highlight the challenges and obstacles in providing adequate care; and to outline a multidisciplinary approach to management in which medical visits retain their importance as part of a team comprising the patient, his or her family and a multidisciplinary group of health professionals who are able to move beyond the traditional approach of diabetes as a disease and greatly improve outcomes.

Effective communication is at the heart of medical profession, whether it is patient-doctor communication, interpersonal communication, or communication with the scientific and research community. However, medical professionals are not adequately trained in these skills, and when it comes to presentations, the message is often lost due to inadequate preparation, ineffective slides, and a generally unconvincing performance by the presenter. This book addresses all aspects of the communication skills required by individuals entering medical school as well as professionals farther up the career ladder. Each chapter offers a quote or a statement that captures the essence of the text. Adopting a unique approach known as A, B, C, D and E (Assess Need, Brief, Contextualize, Describe and Evaluate) the book includes abundant illustrations, real-world case scenarios, anecdotes, tables, graphs and cartoons, as well as practical information, and tips on communicating effectively. As such it is a valuable resource for new and experienced clinicians, educators and researchers wanting to improve their communications skills.

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters.
