The discovery of this theory by Einstein in 1915 involved far reaching insights on the nature of gravity and the dynamical structure of space and time.Gravitational Theory - UMD PhysicsUsing physics, you can calculate the gravitational force that is exerted on one object by another object. For example, given the weight of, and distance between, two objects, you can calculate how large the force of gravity is between them. Here are some

practice questions that you can try. Practice questions The gravitational force between [...]Gravitational Force in Physics Problems - dummiesGravity, or gravitation, is a natural phenomenon by which all things with mass or energy—including planets, stars, galaxies, and even light—are brought toward one another. On Earth, gravity gives weight to physical objects, and the Moon's gravity causes the ocean tides. The gravitational attraction of the original gaseous matter present in the Universe caused it to begin coalescing, forming stars—and for the stars to group together into galaxies—so gravity is responsible for many of ...Gravity - WikipediaDownload Pradeep Kshetrapal notes for Physics IIT JEE.
