Much has been written about special education and about inclusive education, but there have been few attempts to pull these two concepts and approaches together. This book does just that: sets special education within the context of inclusive education. It posits that to include, effectively, all children with special educational needs in schools requires an integration of both concepts, approaches, and techniques. It has never been more timely to publish a book that helps professionals who work with schools, such as psychologists, special education professionals, and counselors, to identify effective practices for children with special needs and provide guidelines for implementing these in inclusive schools.

In 2015, the Institute of Medicine (USA) issued a report critical of the research effort and clinical

care for ME/CFS (Myalgic Encephalomyelitis/Chronic Fatigue Syndrome) formerly known as Chronic Fatigue Syndrome (CFS) and Chronic Fatigue Immune Deficiency Syndrome (CFIDS). While worldwide investigation into the cause and nature of ME/CFS remains disproportionately small, and treatment remains symptomatic and controversial, modest research continues in all aspects of this disease: epidemiology, possible infectious origins and other triggers, possible involvement of genetics, metabolism, and microbiome, influence of co-morbid conditions, and more. Treatment of patients consists of providing symptomatic relief. Guidance in doing so is provided for the clinician. School-age children require not only treatment but, as revealed in a 25-year retrospective study, continued engagement with peers and social activity. This e-book explores the breadth and depth of current ME/CFS research and clinical care. Its impact for other chronic, complex illnesses should not be overlooked.

In this groundbreaking book, organizational effectiveness experts Edward Lawler and Christopher Worley show how organizations can be "built to change" so they can last and succeed in today's

global economy. Instead of striving to create a highly reliable Swiss watch that consistently produces the same behavior, they argue organizations need to be designed in ways that stimulate and facilitate change. Built to Change focuses on identifying practices and designs that organizations can adopt so that they are able to change. As Lawler and Worley point out, organizations that foster continuous change are closely connected to their environments. Reward experimentation. Learn about new practices and technologies. Commit to continuously improving performance. Seek temporary competitive advantages.

Myalgic encephalomyelitis (ME) and chronic fatigue syndrome (CFS) are serious, debilitating conditions that affect millions of people in the United States and around the world. ME/CFS can cause significant impairment and disability. Despite substantial efforts by researchers to better understand ME/CFS, there is no known cause or effective treatment. Diagnosing the disease remains a challenge, and patients often struggle with their illness for years before an identification is made. Some health care providers have been skeptical about the serious physiological - rather than psychological - nature of the illness. Once diagnosed, patients often complain of receiving hostility from their health care provider as well as being subjected to treatment strategies that exacerbate their symptoms. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome proposes new diagnostic clinical criteria for ME/CFS and a new term for the illness - systemic exertion intolerance disease (SEID). According to this report, the term myalgic encephalomyelitis does not accurately describe this illness, and the term chronic fatigue syndrome can result in trivialization and stigmatization for patients afflicted with this illness. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome stresses that SEID is a medical - not a psychiatric or psychological - illness. This report lists the major symptoms of SEID and recommends a diagnostic process. One of the report's most important conclusions is that a thorough history, physical examination, and targeted work-up are necessary and often sufficient for diagnosis. The new criteria will allow a large percentage of undiagnosed patients to receive an accurate diagnosis and appropriate care. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome will be a valuable resource to promote the prompt diagnosis of patients with this complex, multisystem, and often devastating disorder; enhance public understanding; and provide a firm foundation for future

improvements in diagnosis and treatment.
