John Vigor turns the spotlight on twenty seaworthy sailboats that are at home on the ocean in all weather. These are old fiberglass boats, mostly of traditional design and strong construction. All are small, from 20 feet to 32 feet overall, but all have crossed oceans, and all are cheap. Choosing the right boat to take you across an ocean or around the world can be confusing and exasperating, particularly with a tight budget. Vigor sets out to remedy that in this book. He compares the designs and handling characteristics of 20 different boats whose secondhand market prices start at

about \$3,000. Interviews with experienced owners (featuring valuable tips about handling each boat in heavy weather) are interspersed with line drawings of hulls, sail plans, and accommodations. Vigor has unearthed the known weaknesses of each boat and explains how to deal with them. He rates their comparative seaworthiness, their speed, and the number of people they can carry in comfort. If you have ever dreamed the dream this book can help you turn it into reality.

Saving Sailing makes an eloquent case for the revival of family sailing -- and similar uses of free time for lifelong pastimes that enrich our lives. The issue: participation in sailing is declining in America, down more than 40% since 1997 and 70% since 1979. In this wide-ranging book, researcher and avid sailor Nicholas Hayes explains why. The book shows how pressures on free time have increased, and how, in response, many Americans have turned to less rewarding forms of passive or overly structured activities and away from lifelong, family-based, multi-generational recreation. Saving Sailing builds a case for choosing how to spend free time better, seeking quality experiences with families and friends through lifelong pastimes like sailing. The main challenge, he suggests, is to develop an active system of mentoring, especially between generations. The lessons are broader than sailing, with useful ideas for all parents, for anyone seeking to strengthen the social fabric of American communities, and for those involved in programming for youth and adult activities. Author Nick Hayes is a market researcher and partner at the consulting firm FiveTwelve Group, and is active in the Milwaukee sailing scene. He has studied sailing, sailors, and sailing clubs for years, and interviewed more than 1,200 sailors worldwide since 2003 for this book. He lives in Milwaukee, Wisconsin.

This manual takes both novice and experienced boatowner through minor to major repairs of electrical systems, engines, electronics, steering systems, generators, pumps, cookers, spars and rigging. When it was first published in 1990, the Boatowner's Mechanical & Electrical Manual broke new ground. It was hailed as the first truly DIY manual for boatowners and has sold in its thousands ever since. There have been significant changes in boat systems since then, particularly electrical systems, and this fourth edition has been fully updated to reflect these developments and expand its predecessor's worldwide popularity. With the used boat market growing and becoming more complex, here is the book that all boat buyers have been waiting for: John Kretschmer's Used Boat Notebook has long been one of the most popular features in Sailing Magazine where Kretschmer provides a hard hitting, detailed review of a well-known boat each month. In this new collection, Kretschmer dedicates each chapter to an individual boat, providing the same fine details and updated information that made his magazine column a success. The thoroughly researched reviews of the 40 most popular boats include owner insights, a guide to common problems and suggestions on where to find parts, advice and support. There are plenty of books that offer general information on what to look for in an offshore boat, but only this book focuses on the specifics a prospective buyer is looking for.

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines

worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

For millennia, humans well-knew that there was a force far more powerful than they upon the Earth, and that was Nature itself. They could only dream of overcoming its power, or try to believe in the myths and fables of others who supposedly had done so. Then, at the dawn of the 19th century, along came a brilliant, creative, controversial American by the name of Robert Fulton. In the late summer of 1807, he ran his experimental "steamboat" from New York City to Albany, not once, but repeatedly. With these continuing commercial trips, Fulton showed that it was possible to alter artificially both a person's location and the amount of time it took to change it. In so doing, he also broke through an enormous psychological barrier that had existed in people's minds; it was, in fact, possible to overcome Nature to practical effect. But running these steamboats on rivers, lakes and bays was one thing. Taking such a vessel on a voyage across the ocean was a different proposition altogether. Experienced mariners didn't think it could be done. These early steamboats were just too flimsy and unwieldy to withstand the dangers of the deep. Yet there was at least one man who believed otherwise. His name was Captain Moses Rogers. He set out to design a steam vessel that was capable of overcoming the vicissitudes of the sea. This craft would be not a steamboat, but a steamship, the first of its kind. Finding a crew for such a new-fangled contraption proved to be exceedingly difficult. Mariners--conditioned as they were to "knowing the ropes" of a sailing ship--looked upon this new vessel, and its unnatural means of propulsion, with the greatest suspicion. To them, it was not a "Steam Ship"--instead, it was a "Steam Coffin."

Nathanael G. Herreshoff was the greatest yacht and marine designer and builder this country has ever produced. He is credited with the introduction of more new devices in the design of boats than any other man, and the great yachts that he designed for the successful defense of the America's cup caught the imagination of the world.
