*Critical Perspectives for Pedagogy and
Practice* Routledge

Health Education: Critical perspectives provides a socio-cultural and critical approach to health education. The book draws together international experts in the fields of health and education who deconstruct contemporary discourses and practices, and re-imagine a health education that both connects with young people and offers a way forward in

addressing issues of health and wellbeing. Chapters within specifically link academic work on neoliberalism, healthism, risk and the body to wider discourses of health and health education. They challenge current practices and call for a re-thinking of current health programs in education settings. A unique feature of this book is the analyses of health education from both political and applied levels across a range of international contexts. The book is divided into three sections: the social and political contexts informing health education how individual health issues (sexuality, alcohol, mental health, the

body and obesity, nutrition) articulate in education in complex ways alternative ways to think about health and health education pedagogy. The overall theme of the book offers a perspective that the current approach to health education – promoting a fear of ill health, self-surveillance and individual responsibility – can become a form of health fascism, and we need to be cognisant of this potential and its consequences for young people. The book will be of key interest to academics and researchers exploring the political context of health education.

Handbook on the International

Political Economy of Gender Routledge

This expansive collection enriches the field of food studies with a feminist intersectional perspective, addressing the impacts that race, ethnicity, class, and nationality have on nutritional customs, habits, and perspectives. Throughout the text, international scholars explore three areas in feminist food studies: the socio-cultural, the corporeal, and the material. The textbook's chapters intersect as they examine how food is linked to hegemony, identity, and tradition, while contributors offer diverse perspectives that stem from biology, museum studies, economics, popular culture, and history. This text's engaging writing style and timely subject-matter encourage student discussions and forward-looking analyses on the advancement of food studies. With a unique multidisciplinary and global perspective, this vital resource is well-suited to undergraduate students of food studies, nutrition, gender studies, sociology, and anthropology.

Critical Perspectives on Innovation**Management** John Wiley & Sons

Agrarian transformations within and across countries have been significantly and

dynamically altered during the past few decades compared to previous eras, provoking a variety of reactions from rural poor communities worldwide. The recent convergence of various crises – financial, food, energy and environmental – has put the nexus between 'rural development' and 'development in general' back onto the center stage of theoretical, policy and political agendas in the world today. Confronting these issues will require (re)engaging with critical theories, taking politics seriously, and utilizing rigorous and appropriate research methodologies. These are the common messages and implications of the various contributions to this collection in the context of a scholarship that is critical in two senses: questioning prescriptions from mainstream perspectives and interrogating popular conventions in radical thinking. This book focuses on key perspectives, frameworks and methodologies in agrarian change and peasant studies. The contributors are leading scholars in the field of rural development studies: Henry Bernstein, Terence J. Byres, Saturnino M. Borrás Jr, Marc Edelman, Cristóbal Kay, Benedict

Kerkvliet, Philip McMichael, Shahra Razavi, Ian Scoones and Teodor Shanin. This book was previously published as a special issue of the *Journal of Peasant Studies*.
Critical Perspectives Emerald Group Publishing

First Published in 1989. Routledge is an imprint of Taylor & Francis, an informa company.

Critical Perspectives On Educational Leadership Liverpool University Press
Critical Perspectives in Emergency Services Management makes an important contribution to the subject of emergency services management and to public administration and organization studies more generally. It critically assesses developments in emergency services management by examining the multi-dimensional nature of the provision of emergency services and their connectedness in advanced western democracies. The effective management of emergency services has never been more important than in today's high-pressured and cost-conscious public sector. The authors of this volume forensically analyse the challenges of delivering emergency services within this

context. This book provides an in-depth, scholarly and comprehensive analysis of the changing landscape of emergency service provision and clearly addresses a gap in the market for a critical volume on the emergency services. For anyone seeking to understand why and how the management of emergency services matters, this collection is essential reading.

Social Movements and Critical Perspectives Routledge

Critical Perspectives in Food Studies

Critical Perspectives in Food Studies OUP
Canada

This volume examines revolutionary constructs in literacy education and demonstrates how they have been gentrified, whitewashed, and appropriated, losing their revolutionary edge so as to become palatable for the mainstream. Written by top scholars in literacy education, chapters cover key concepts that were originally conceived as radical theories to upset the status quo—including Third Space, Funds of Knowledge, Culturally Relevant Pedagogies, and more. Each chapter addresses how the core theory was

culturally appropriated and de-fanged to support rather than take down racial and societal hierarchies. Critiquing the harmful impact of watering down these theories, the contributors offer ways to restore the edge to these once groundbreaking ideas, reject racist and assimilationist trends, and support the original vision behind these liberatory theories. In so doing, this volume adopts a truly radical, critical stance that is essential for researchers, scholars, and students in literacy education.

Leadership Theory Zed Books Ltd.

Health, Food and Social Inequality investigates how vast amounts of consumer data are used by the food industry to enable the social ranking of products, food outlets and consumers themselves, and how this influences food consumption patterns. This book supplies a fresh social scientific perspective on the health consequences of poor diet. Shifting the focus from individual behaviour to the food supply and the way it is developed and marketed, it discusses what is known about the shaping of food behaviours by both social theory and psychology. Exploring how knowledge of social

identities and health beliefs and behaviours are used by the food industry, Health, Food and Social Inequality outlines, for example, how commercial marketing firms supply food companies with information on where to locate snack and fast foods whilst also advising governments on where to site health services for those consuming such foods disproportionately. Giving a sociological underpinning to Nudge theory while simultaneously critiquing it in the context of diet and health, this book explores how social class is an often overlooked factor mediating both individual dietary practice and food marketing strategies. This innovative volume provides a detailed critique of marketing and food industry practices and places class at the centre of diet and health. It is suitable for scholars in the social sciences, public health and marketing.

Restoring the Edge to Edgy Ideas Edward Elgar Publishing

This cross-disciplinary volume brings together diverse perspectives on children's food occasions inside and outside of the home across different geographical locations. By unpacking

mundane food occasions - from school dinners to domestic meals and from breakfast to snacks - *Feeding Children Inside and Outside the Home* shows the role of food in the everyday lives of children and adults around them. Investigating food occasions at home, schools and in nurseries during weekdays and holidays, this book reveals how children, mothers, fathers, teachers and other adults involved in feeding children, understand, make sense of and navigate ideological discourses of parenting, health imperatives and policy interventions. Revealing the material and symbolic complexity of feeding children, and the role that parenting and healthy discourses play in shaping, perpetuating and transforming both feeding and eating, this volume shows how micro and macro aspects are at play in mundane and everyday practices of family life and education. This volume will be of great interest to a wide range of students and researchers interested in the sociology of family life, education, food studies and everyday consumption.

Whitewashed Critical Perspectives

Edward Elgar Publishing

Weight stigma is so pervasive in our culture that it is often unnoticed, along with the harm that it causes. Health care is rife with anti-fat bias and discrimination against fat people, which compromises care and influences the training of new practitioners. This book explores how this happens and how we can change it. This interdisciplinary volume is grounded in a framework that challenges the dominant discourse that health in fat individuals must be improved through weight loss. The first part explores the negative impacts of bias, discrimination, and other harms by health care providers against fat individuals. The second part addresses how we can 'fatten' pedagogy for current and future health care providers, discussing how we can address anti-fat bias in education for health professionals and how alternative frameworks, such as *Health at Every Size*, can be successfully incorporated into training so that health outcomes for fat people improve. Examining what works and what fails in teaching health care providers to truly care for the health of fat individuals without further stigmatizing them or harming them, this book is for scholars

and practitioners with an interest in fat studies and health education from a range of backgrounds, including medicine, nursing, social work, nutrition, physiotherapy, psychology, sociology, education and gender studies. *Critical Perspectives* Routledge
The relationship between food and development has always been controversial. Over the last thirty years, development in the north and south has failed to deliver people a decent diet. While some people have too little food and die as a consequence, some people have too much food and die from associated diseases. Furthermore, some methods of food production create social dislocation and deadly environments where biodiversity is eroded and pollution is rampant. While guaranteeing enough food for the world's inhabitants continues to be a serious challenge, new issues about food have emerged. *Food and Development* is a lively and lucidly written text which provides a clear and accessible introduction to these complex and diverse food related problems. It explores the continued prevalence of mass under nutrition in the developing world; acute

food crises in some places associated with conflict; the emergence of over nutrition in the developing world and the vulnerability of the contemporary global food production system. The text identifies the major problems and analyzes factors at international, national and local scales to understand their continued prevalence. The book concludes by evaluating the potential of some oppositional forces to challenge the hegemony of the contemporary food system. This timely and original text will be invaluable to undergraduates interested in the challenges surrounding food and development. The text is richly filled with case studies from the Global North and South to illustrate the nature and extent of these urgent issues and their interrelated nature. Each chapter contains a range of features to assist undergraduate learning, including: learning objective, key concepts, summaries, discussion questions, further reading and websites, and follow up activities.

Facilitator's Guide for Cultivating Critical Perspectives Routledge

The conceptualization of dementia has changed dramatically in recent years with

the claim that, through early detection and by controlling several risk factors, a prevention of dementia is possible.

Although encouraging and providing hope against this feared condition, this claim is open to scrutiny. This volume looks at how this new conceptualization ignores many of the factors which influence a dementia sufferers' prognosis, including their history with education, food and exercise as well as their living in different epistemic cultures. The central aim is to question the concept of prevention and analyze its impact on aging people and aging societies.

Critical Perspectives on Black Women and College Success Routledge

Featuring the work of several up-and-coming scholars working to deepen theoretical perspectives on addiction and its relationship to social control and deviance, this volume fills a gap in addiction studies by offering critical perspectives that interrogate and challenge traditional and/or mainstream understandings of addiction.

The New Enclosures: Critical Perspectives on Corporate Land Deals Springer

Most firms perceive innovation as the best

way to grow. However, how it can best be managed is still unclear. While the number of publications on innovation has skyrocketed over the past two decades, it is still increasingly difficult to gain an overview of its most critical aspects. It has been even more challenging that much has been written about the possible benefits of innovation, but there is still lack of understanding of its downsides at the innovative firm level. This can lead to detrimental effects, such as a lower commitment to innovation, a lack of the effective innovation strategy, inappropriate organizational design that does not enhance innovation, and either a too cautious or too risky approach to innovation. Thus, the book aims to explore the concept of innovation management as well as to identify the bright and dark sides of innovation in innovative firms. A better understanding of the positive and negative effects of product and process innovation expands the knowledge base on innovation management and allows managers to manage innovation in a more efficient and effective manner. This book will be valuable to researchers, academics, managers, and advanced students in the

fields of management studies, strategy, and organizational studies.

Critical Perspectives in Public Health
Springer

"Bringing together original contributions by Canadian scholars from various disciplinary backgrounds, *Critical Perspectives in Food Studies* introduces students to the shifting interpretations, perspectives, challenges, governance issues, and future visions that shape the study of food and food issues in Canada and around the world. Offering the most up-to-date overview of the field, this second edition incorporates new chapters on a range of current food-related issues, including food security, farm animal welfare, genetically modified crops, sustainability, and alternative food systems."--

Critical Perspectives on Media, Power and Change McGraw-Hill Education (UK)

This popular introductory book provides a clear introduction to the key ideas within media studies. The friendly writing style and everyday examples, which made the first edition a favourite with students and lecturers alike, has been retained and updated in this new edition. This

comprehensive text provides a wide-ranging perspective on the media and: Uses examples and case studies from the real world Shows how key concepts can help us understand the relationship between the Media and society Provides a clear explanation of how critical perspectives on the Media construct thinking about media businesses, texts and audiences The fully updated new edition features new boxed summaries of critical approaches and key thinkers. Chapters cover the main topics that students are likely to encounter in their studies, including: Advertising, media and violence, news, politics, young audiences, globalization, sport, popular music and new technology. This book is essential reading for students in media studies, cultural studies and courses with a media interest, such as sociology and English.

Critical Perspectives on Veganism

University of Georgia Press

This book examines the ethics, politics and aesthetics of veganism in contemporary culture and thought. Traditionally a lifestyle located on the margins of western culture, veganism has now been propelled into the mainstream, and as agribusiness

grows animal issues are inextricably linked to environmental impact as well as to existing ethical concerns. This collection connects veganism to a range of topics including gender, sexuality, race, the law and popular culture. It explores how something as basic as one's food choices continue to impact on the cultural, political, and philosophical discourse of the modern day, and asks whether the normalization of veganism strengthens or detracts from the radical impetus of its politics. With a Foreword by Melanie Joy and Jens Tuidor, this book analyzes the mounting prevalence of veganism as it appears in different cultural shifts and asks how veganism might be rethought and re-practised in the twenty-first century.

Critical Perspectives on the Supply and Marketing of Food University of Arkansas Press

The market-leading interdisciplinary exploration of food and its essential place in our society by Canadian and international scholars. *Critical Perspectives in Food Studies* is a compelling examination of the shifting interpretations, perspectives, challenges, governance

issues, and future visions that shape the study of food and food issues in Canada and around the world. With new chapters on a diverse range of current food-related issues, this third edition continues to bring students original contributions by Canadian scholars that will inspire readers to consider the varied and complex means by which we bring food to the table.

Feeding Children Inside and Outside the Home Routledge

This volume examines the dominant neoliberal agenda for agricultural development and hunger alleviation in Africa. The text reviews the history of African agricultural and food security policy in the post-colonial period, across a range of geographical contexts, in order to contextualise the productionist approach embedded in the much heralded New Green Revolution for Africa. This strategy, supported by a range of international agencies, promotes the use of hybrid seeds, fertilisers, and pesticides to boost crop production. This approach is underpinned by a new and unprecedented

level of public-private partnerships as donors actively work to promote the private sector and build links between African farmers, input suppliers, agro-dealers, agro-processors, and retailers. On the consumer end, increased supermarket penetration into poorer neighbourhoods is proffered as a solution to urban food insecurity. The chapters in this volume complicate understandings of this new approach and raise serious questions about its effectiveness as a strategy for increasing food production and alleviating poverty across the continent. This book is based on a special issue of *African Geographical Review*.

Weight Bias in Health Education Routledge
This second volume in the Food Policy series focuses on critical nutrition and dietetics studies, offering an innovative and interdisciplinary exploration of the complexities of the food supply and the actors in it through a new critical lens. The volume provides an overview of the growth of critical nutrition and dietetics since its inception in 2009, as well as

commentary on its continuing relevance and its applicability in the fields of dietetic education, research, and practice.

Chapters address key topics such as how to bring critical dietetics into conventional practice, applying critical diets in clinical practice, policy applications, and new perspectives on training and educating a critical nutrition and dietetic workforce. Contributing authors from around the globe also discuss the role of critical nutrition dietetics in industry, private practice, and consultancy, as well the role of critical dietetics in addressing the food, hunger, and health issues associated with the world economic crisis. The authors designed the volume to be a reference work for students enrolled in undergraduate and postgraduate courses in Critical Nutrition, Critical Food Studies, and Critical Dietetics. Each chapter offers concise aims and learning outcomes, as well as assignments for students and a concise chapter summary. These features enhance the value of the volume as a learning tool.
