 Scales Aren't Just a Fish Thing takes the study of music one step further and color-codes all the notes, adds music theory card games and play-along sheet music. Every student, no matter their age or learning style or difference, can easily move through the music and memorize as they go. Learning of difficult music theory concepts takes place through the silent clues: musical stems the color of the string the note is played, sharps and flats circled with the color of the note it is moving toward, color-coding of each note. No need for correction at your next lesson. Never practice incorrectly again with all the clues and crutches offered with Scales Aren't Just a Fish Thing. As this is already Book 3 'Manatees' in the Scales Aren't Just a Fish Thing Gum Drop Note Series, I assume you know the drill. But just in case you are jumping in the deep end, let me explain how it works. Each note has its own color. A = Red B = Purple C = Brown (Chocolate) D = Gray E = Blue F= Orange G=Green Any sharp or flat is circled with the color it is moving toward. The stem of the note is the color of the string it is played on.

A designer's deep dive into seven science fiction films, filled with "gloriously esoteric nerdery [and] observations as witty as they are keen" (Wired). In Typeset in the Future, blogger and designer Dave Addey invites sci-fi movie fans on a journey through seven genre-defining classics, discovering how they create compelling visions of the future through typography and design. The book delves deep into 2001: A Space Odyssey, Star Trek: The Motion Picture, Alien, Blade Runner, Total Recall, WALL-E, and Moon, studying the design tricks and inspirations that make each film transcend mere celluloid and become a believable reality. These studies are illustrated by film stills, concept art, type specimens, and ephemera, plus original interviews with Mike Okuda (Star Trek), Paul Verhoeven (Total Recall), and Ralph Eggleston and Craig Foster (Pixar). Typeset in the Future is an obsessively geeky study of how classic sci-fi movies draw us in to their imagined worlds.

For 250 years after its introduction to Europe around 1600, the method of decorating paper known as marbling reigned supreme as the chief means of embellishing the fine work of hand-bookbinders. Richard J. Wolfe reconstructs the rise and fall of the craft and offers the most comprehensive account available of its history, techniques, and patterns. A publication of the A.S.W. Neuropsychologist Offers Hope to Those Struggling with Depression As a board-certified neuropsychologist, Dr. Michelle Bengtson sees the devastation of depression. Early on, she practiced the most effective treatments and prescribed them for her clients. But when she experienced depression herself, she found that the treatments she had recommended were lacking. Her experience showed her the missing component in treating depression. In Hope Prevails, Dr. Bengtson writes with deep compassion, blending her training and faith, to offer readers a hope grounded in God's love and grace. She helps readers understand what depression is, how it affects them spiritually, and what, by God's grace, it cannot do. The result is an approach that offers the hope of release, not just the management of symptoms. For those who struggle with depression and those who want to help them, Hope Prevails offers hope for the future.

Mutual-fund superstar Peter Lynch and author John Rothchild explain the basic principles of the stock market and business in an investing guide that will enlighten and entertain anyone who is high-school age or older. Many investors, including some with substantial portfolios, have only the sketchiest idea of how the stock market works. The reason, say Lynch and Rothchild, is that the basics of investing—the fundamentals of our economic system and what they have to do with the stock market—are not taught in school. At a time when individuals have to make important decisions about saving for college and 401(k) retirement funds, this failure to provide a basic education in investing can have tragic consequences. For those who know what to look for, investment

opportunities are everywhere. The average high-school student is familiar with Nike, Reebok, McDonald's, the Gap, and the Body Shop. Nearly every teenager in America drinks Coke or Pepsi, but only a very few own shares in either company or even understand how to buy them. Every student studies American history, but few realize that our country was settled by European colonists financed by public companies in England and Holland—and the basic principles behind public companies haven't changed in more than three hundred years. In *Learn to Earn*, Lynch and Rothchild explain in a style accessible to anyone who is high-school age or older how to read a stock table in the daily newspaper, how to understand a company annual report, and why everyone should pay attention to the stock market. They explain not only how to invest, but also how to think like an investor.
