Improve your math knowledge with free questions in "Similar and congruent figures" and thousands of other math skills.[IXL | Similar and congruent figures | 6th grade math](#)

Students learn that similar figures are figures that have the same shape but not necessarily the same size. Therefore, the corresponding angles of similar figures are congruent, but the corresponding sides of similar figures are not necessarily congruent. However, the ratios of the lengths of corresponding sides of similar figures are equal.

The two shapes need to be the same size to be congruent. When we need to resize one shape to make it the same as the other, the shapes are Similar.

[Congruent - MATH](#)

Similar figures have exactly the same size and shape. True or false. Congruent figures are exactly the same in every way. Triangles and are similar. If this is true, then the side lengths are the same, true or false. True or false. To figure out if two figures are similar, then their side lengths form a proportion. Define similar figures; Define congruent figures. Use a ruler to draw a congruent pair of triangles.
