The book presents most recent investigations into foreign language teaching and learning discussed by prominent scholars in the field. A wide variety of topics ranges from theoretical approaches to foreign language instruction to a discussion of findings of empirical research in language learning and pedagogy. The theoretical part of the volume tackles issues which constitute the backbone to the understanding of the processes involved in language development, learning and teaching and thus contribute to applied research. The empirical articles in Parts Two and Three of the volume report on studies focusing on such important issues as various dimensions of awareness (language, cross-cultural competence or affectivity) and specific methodologies implemented in different educational settings (such as, for instance, dyslexic learners) or in teacher training programmes.

This book is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge colleges as the basis for conditional offers. They are also used by Warwick University, and many other mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination.

Advanced Problems in Mathematics is recommended as preparation for any undergraduate mathematics course, even for students who do not plan to take the Sixth Term Examination Paper. The questions analysed in this book are all based on recent STEP questions selected to address the syllabus for Papers I and II, which is the A-level core (i.e. C1 to C4) with a few additions. Each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must read for any student wishing to apply to scientific subjects at university level and for anybody interested in advanced mathematics.

NATIONAL BESTSELLER • For anyone who wants to learn a foreign language, this is the method that will finally make the words stick. "A brilliant and thoroughly modern guide to learning new languages."—Gary Marcus, cognitive psychologist and author of the New York Times bestseller *Guitar Zero* At thirty years old, Gabriel Wyner speaks six languages fluently. He didn't learn them in school—who does? Rather, he learned them in the past few years, working on his own and practicing on the subway, using simple techniques and free online resources—and here he wants to show others what he's discovered. Starting with pronunciation, you'll learn how to rewire your ears and turn foreign sounds into familiar sounds. You'll retrain your tongue to produce those sounds accurately, using tricks from opera singers and actors. Next, you'll begin to tackle words, and connect sounds and spellings to imagery rather than translations, which will enable you to think in a foreign language. And with the help of sophisticated spaced-repetition techniques, you'll be able to memorize hundreds of words a month in minutes every day. This is brain hacking at its most exciting, taking what we know about neuroscience and linguistics and using it to create the most efficient and enjoyable way to learn a foreign language in the spare minutes of your day.

"Validating Second Language Reading Examinations describes the development of an empirical framework for test validation and comparison of reading tests at different proficiency levels through a critical evaluation of alignment with the Common European Framework of Reference (CEFR). It focuses on contextual parameters, cognitive processing operations and test results and identifies parameters for the description of different levels of reading proficiency examinations. The volume explores procedures for linking tests to the CEFR and proposes both qualitative and quantitative methods that complement the procedures recommended in the Council of Europe's Relating Language Examinations to the Common European Framework of Reference for Languages (CEFR): A Manual, piloted in 2003 and revised 2009. Key features of the book include: - a detailed review of the literature on CEFR alignment, vertical scaling, test specifications and test comparability - a comprehensive and coherent approach to the validation of reading tests - an accessible and systematic description of procedures for collecting validity evidence based on a sound theoretical framework - a case study comparing different testing systems targeting the same CEFR level"--

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central

machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.

This volume is the newest release in the authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In addition, a new reference intake, the Tolerable Upper Intake Level (UL), has also been established to assist an individual in knowing how much is "too much" of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium, copper, manganese, molybdenum, zinc, and other potentially beneficial trace elements such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible with good nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human health. This book will be important to professionals in nutrition research and education.

The case studies in this volume offer new insights into word order change. As is now becoming increasingly clear, word order variation rarely attracts social values in the way that phonological variants do. Instead, speakers tend to attach discourse or information-structural functions to any word order variation they encounter in their input, either in the process of first language acquisition or in situations of language or dialect contact. In second language acquisition, fine-tuning information-structural constraints appears to be the last hurdle that has to be overcome by advanced learners. The papers in this volume focus on word order phenomena in the history of English, as well as in related languages like Norwegian and Dutch-based creoles, and in Romance.

Learning French and obtaining the DELF B1 title has never been so easy. With this French book you will be able to improve your oral comprehension and pronunciation in an interactive and dynamic way, watching your progression as you progress through the 20 most common topics of the DELF B1 exam. All this with authentic and real French speaking documents in them. At the beginning of each topic, you will have to scan a QR code that will take you directly to our platform. Once there, you will have to watch a video to pronounce the essential vocabulary words and then you will have to listen / watch 3 documents and answer the questions asked about them. These documents are made up of reports, interviews, surveys or other standard formats that you might find in the exam. For each topic, you will get a score out of 25 which you will have to write down on a graph and which will allow you to see your progress through the book. At the end of the book, you will find all the transcripts as well as the corrections. At the end of the 20 topics, I assure you that your level of understanding of French will have improved considerably.
