Excel, the top number-crunching tool, now offers a vastly improved charting function to help you give those numbers dimension and relativity. John Walkenbach, a.k.a. Mr. Spreadsheet, clearly explains all these charting features and shows you how to choose the right chart for your needs. You'll learn to modify data within the chart, deal with missing data, format your chart, use trend lines, construct "impossible" charts, create charts from

pivot tables, dress them up with graphics, and more. Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

This lesson covers how to build Excel charts. Charts are the basis of any dashboard and the main method to present data in a visually appealing way. Excel charts have many hidden options and tweaks. You will learn step-by-step, how to build basic charts and then improve them.

At the end of the lesson, you will be able to create charts that appear to be impossible to build in Excel. The beginning section reviews how to use the chart wizard with all the standard options. Next the lesson covers some unfamiliar chart types (radar, pie of pie, bar of pie). After these basics, you will learn how to get crafty with charts and you will work through exercises showing you how to accomplish visual effects that will definitely make your dashboard or workbook the talk of the

office. This lesson includes a link where you can download a follow along workbook and work through the exercises at your own pace. Like the rest of the Mastering Excel series, there is no technical jargon. Just plain English to help you learn Excel.

[Excel 2016 Bible](#) John Wiley & Sons This lesson focuses on many seemingly unrelated topics but then combines them in unexpected ways to

create something greater than the sum of its parts. First we review the concept of Named Ranges. What are they? How can they help in Excel? Then we cover the OFFSET function. It is truly one of the most powerful, flexible and mostly unused functions in Excel. It is unused because it does take some getting used to, OFFSET doesn't 'work' like the rest of the Excel functions. However, we will go through this function in detail here. Then we move on to using Forms in Excel. Forms

give users familiar ways to interact with an Excel worksheet, much like a form on the web. And finally, we combine Named Ranges, OFFSET, Forms and Charts to create animated charts. Excel users will be able to click the worksheet and see the charts animate in real time. There are no macros, no programming involved; just a creative way of combining existing Excel functionality. This lesson covers a lot of ground. To help everyone understand and follow along with the exercises, I

have made available a sample workbook. Follow the link in the book and you can receive the workbook to work on alongside the text. The sample workbook has a bonus extra dynamic chart not covered in the book.
