We have used an updated version of a model paper used in the 2015/16 edition of this book.

**Sqa Past Papers in Higher Modern Studies** Hodder Gibson

A groundbreaking introduction to vectors, matrices, and least squares for engineering applications, offering a wealth of practical examples.

*State Legitimacy and the Criteria for Statehood* Hodder Gibson

Cataloguing the World's Endangered Languages brings together the results of the extensive and influential Catalogue of Endangered Languages (ELCat) project. Based on the findings from the most extensive endangered languages research project, this is the most comprehensive source of accurate information on endangered languages. The book presents the academic and scientific findings that underpin the online Catalogue, located at

[www.endangeredlanguages.com](http://www.endangeredlanguages.com), making it an essential companion to the website for academics and researchers working in this area. While the online Catalogue displays much data from the ELCat project, this volume develops and emphasizes aspects of the research behind the data and includes topics of great interest in the field, not previously covered in a single volume. Cataloguing the World's Endangered Languages is an important volume of particular interest to academics and researchers working with endangered languages.

**Labour Law and Relations** Springer

The problems related to the process of industrialisation such as biodiversity depletion, climate change and a worsening of health and living conditions, especially but not only in developing countries, intensify. Therefore, there is an increasing need to search for integrated solutions to make development more sustainable. The United Nations has acknowledged the problem and approved the "2030 Agenda for Sustainable Development". On 1st January 2016, the 17 Sustainable Development Goals (SDGs) of the Agenda officially came into force. These goals cover the three dimensions of sustainable development: economic growth, social inclusion and environmental protection. The Encyclopedia of the UN Sustainable Development Goals comprehensively addresses the SDGs in an integrated way. It encompasses 17 volumes, each devoted to one of the 17 SDGs. This volume addresses SDG 2, namely "End hunger, achieve food security and improved nutrition and promote sustainable agriculture" and contains the description of a range of related terms, to allow for a better understanding and foster knowledge. Our planet produces enough food to feed everyone. Malnutrition and hunger are the result of inappropriate food production processes, bad governance and injustice. SDG 2 seeks to guarantee quality

and nutritious food to ensure healthy life by adopting a holistic approach that involves various actions targeting different actors, technologies, policies and programs. These initiatives have to face challenges coming from extensive environmental degradation, loss of biodiversity and the interrelated effects of climate change. Concretely, the defined targets are: End hunger and ensure access by all people, in particular the poor and people in vulnerable situations, including infants, to safe, nutritious and sufficient food all year round End all forms of malnutrition, including achieving the internationally agreed targets on stunting and wasting in children under 5 years of age, and address the nutritional needs of adolescent girls, pregnant and lactating women and older persons Double the agricultural productivity and incomes of small-scale food producers, in particular women, indigenous peoples, family farmers, pastoralists and fishers, including through secure and equal access to land, other productive resources and inputs, knowledge, financial services, markets and opportunities for value addition and non-farm employment Ensure sustainable food production systems and implement resilient agricultural practices that increase productivity and production, that help maintain ecosystems, that strengthen capacity for adaptation to climate change, extreme weather, drought, flooding and other disasters and that progressively improve land and soil quality Maintain the genetic diversity of seeds, cultivated plants and farmed and domesticated animals and their related wild species, including through soundly managed and diversified seed and plant banks at the national, regional and international levels, and promote access to and fair and equitable sharing of benefits arising from the utilization of genetic resources and associated traditional knowledge, as internationally agreed Increase investment, including through enhanced international cooperation, in rural infrastructure, agricultural research and extension services, technology development and plant and livestock gene banks in order to enhance agricultural productive capacity in developing countries, in particular least developed countries Correct and prevent trade restrictions and distortions in world agricultural markets, including through the parallel elimination of all forms of agricultural export subsidies and all export measures with equivalent effect, in accordance with the mandate of the Doha Development Round Adopt measures to ensure the proper functioning of food commodity markets and their derivatives and facilitate timely access to market information, including on food reserves, in order to help limit extreme food price volatility Editorial Board Datu Buyung Agusdinata, Mohammad Sadegh Allahyari, Usama Awan, Nerise Johnson, Paschal Arsein Mugabe, Vincent Onguso Oeba, Tony Wall/div

Unicode is a critical enabling technology for developers who want to internationalize applications for global environments. But, until now, developers have had to turn to standards documents for crucial information on utilizing Unicode. In Unicode Demystified, one of IBM's leading software internationalization experts covers every key aspect of Unicode development, offering practical examples and detailed guidance for integrating Unicode 3.0 into virtually any application or environment. Writing from a developer's point of view, Rich Gillam presents a systematic introduction to Unicode's goals, evolution, and key elements. Gillam illuminates the Unicode standards documents with insightful discussions of character properties, the Unicode character database, storage formats, character sequences, Unicode normalization, character encoding conversion, and more. He presents practical techniques for text processing, locating text boundaries, searching, sorting, rendering text, accepting user input, and other key development tasks. Along the way, he offers specific guidance on integrating Unicode with other technologies, including Java, JavaScript, XML, and the Web. For every developer building internationalized applications, internationalizing existing applications, or interfacing with systems that already utilize Unicode.

Onboarding Champions is the essential guidebook for nonprofit board members and executives. It challenges board members to become champions of governance and provides a roadmap to get there. Author James Mueller identifies seven principles of highly effective boards: Culture: Every board has a culture-either by default or intention. Culture is the foundation upon which sound governance is built. Through rich storytelling, observation, and advice Mueller explains how to build a solid culture rooted in sound core values. Character: The time to screen for character is before a board member is seated. Too often, assumptions are made of a person's character based upon the first impression or just because they are willing to serve on the board. Mueller challenges us not to be shy about assessing prospective members' character during recruitment. Competence: It is vital for a board to genuinely examine the board member competencies it needs to become a highly effective board. Mueller shows us how to look beyond business acumen to identify, define, and seek out competencies that will have a transformative effect on a board's ability to govern. Connections: When their organizations fail to access the levels of support they need to thrive, they often assume that they just need more visibility. The deeper truth is that they need to develop a band of believers among a cross-section of potential constituencies. Mueller describes four types of constituencies from which boards need to recruit in order to develop greater organizational support. Composition: Building a strong board that embodies the character, competence, connections, and diversity that organizations need to thrive is not a complicated process. The approach is straightforward, but it takes time and discipline to do it right. Mueller walks us through insights he has derived over four decades to help us succeed at building championship boards. Continuity: Knowledge of how a nonprofit is organized, functions, and performs over time is critical to sound governance decision-making. Mueller discusses how board members must understand how their organization is uniquely wired in order for them to make informed decisions, especially when the stakes are high. Collaboration: Collaboration is the mindset that enables us to work together cooperatively to advance the causes

we serve-whether internally or with other organizations. Mueller describes how to cultivate and sustain the collaborative mindset and the benefits it bestows upon organizations that practice it. In describing Onboarding Champions, international nonprofit governance consultant Steven Bowman writes: James Mueller is a masterful executive, board member, and high-level consultant to nonprofit organizations, and this shines through in his latest book, Onboarding Champions. He gets right into the heart of the matter in the first chapter-boom!-creating board culture, a topic that is just now starting to find its way into the boardroom. James asks incredibly insightful questions throughout the book that can unlock strategic conversations around recruitment, selection, and onboarding of new directors-and provides practical exercises that can give insight into your own situation!

The third edition succeeds the fifth update of second edition. One of the main features has been the adoption of new and revised international standards, notably the International Standard Identifier for Libraries and Related Organizations, the ISBN 13 and the linking ISSN. New fields have been added for recording the Persistent Record Identifier. Uniform Conventional Headings for Legal and Religious texts are now catered for with separate fields. A number of fields have been revised: archival materials, manuscripts and documentation produced by the ISSN International Centre.

**Muslim Minority-State Relations** World Conservation Union

This volume explores the dominant types of relationships between Muslim minorities and states in different parts of the world, the challenges each side faces, and the cases and reasons for exemplary integration, religious tolerance, and freedom of expression. By bringing together diverse case studies from Europe, Africa, and Asia, this book offers insight into the nature of state engagement with Muslim communities and Muslim community responses towards the state, in turn. This collection offers readers the opportunity to learn more about what drives government policy on Muslim minority communities, Muslim community policies and responses in turn, and where common ground lies in building religious tolerance, greater community cohesion and enhancing Muslim community-state relations.

Defining a 'State' and the Criterion for 'Statehood' found ambiguous due to legitimacy issues. State as a subject of international law enabled with

certain rights and duties obliged to perform. While the political relevance of the recognition of states is beyond doubt, the rules of law which apply to this aspect remain uncertain. The establishment of the modern state system in the world roots back to the Westphalian treaties. Montevideo Convention of 1933, initially identified qualifications for a state and subsequently accepted by many states, regional and international institutes with codification. Declaratory and Constitutive theories on the criterion for statehood debated on relevance of 'international recognition' over the other factual qualifications of; population, territory, government and the capacity to entire into relations with other States. Admission as a member to the

UNO recognizes a new state as a part of the globally organized community by way of co-optation. The globalization and related changes along with humanitarian considerations have created various types of status for states. International recognition for a state expressed through diplomatic relations and the influence of UNSC, found to be prominent aspects over the other domestic settings for statehood except the 'effective control' over its territory. This paper meant to clarify ambiguities on the legitimacy of a state and the criteria for statehood with reference to sources of international law, cases and secondary data analysis methods..
