**Principles of Naval Architecture: Resistance, propulsion and vibration** Routledge

Our organizations are flooded with empty talk. We are constantly "going forward" to lands of "deliverables", stopping off on the "journey" to "drill down" into "best practice". Being an expert at using management speak has become more important in corporate life than delivering long lasting results. The upshot is that meaningless corporate jargon is killing our organizations. In this book, management scholar the author argues we need to call this empty talk what it is: bullshit. The book looks at how organizations have become vast machines for manufacturing, distributing and consuming bullshit. It follows how the meaningless language of management has spread through schools, NGOs, politics and the media. Business Bullshit shows you how to spot business bullshit, considers why it is so popular, and outlines the impact it has on organizations and the people who work there. It also outlines what we can do to minimise bullshit at work. The author makes a case for why organizations need to avoid empty talk and reconnect with core activities.

After you have read The Spirits' Book, you will no longer have any reason to fear death. The Spirits' Book will provide you with the answers to nearly all the questions you may have with regards to the origin, nature and destiny of each and every soul on earth – and those of other worlds as well. It also addresses the issues of God, creation, moral laws and the nature of spirits and their relationships with humans. The book contains answers that were dictated to mediums by highly evolved spirits who love God. The Spirits' Book is the initial landmark publication of a Doctrine that has made a profound impact on the thought and view of life of a considerable portion of humankind since the first French edition was published in 1857.

**Studies on Hysteria** FEB Editora/CEI

In this book Peter Burke adopts a socio-cultural approach to examine the changes in the organization of knowledge in Europe from the invention of printing to the publication of the French Encyclopédie. The book opens with an assessment of different sociologies of knowledge from Mannheim to Foucault and beyond, and goes on to discuss intellectuals as a social group and the social institutions (especially universities and academies) which encouraged or discouraged intellectual

innovation. Then, in a series of separate chapters, Burke explores the geography, anthropology, politics and economics of knowledge, focusing on the role of cities, academies, states and markets in the process of gathering, classifying, spreading and sometimes concealing information. The final chapters deal with knowledge from the point of view of the individual reader, listener, viewer or consumer, including the problem of the reliability of knowledge discussed so vigorously in the seventeenth century. One of the most original features of this book is its discussion of knowledges in the plural. It centres on printed knowledge, especially academic knowledge, but it treats the history of the knowledge 'explosion' which followed the invention of printing and the discovery of the world beyond Europe as a process of exchange or negotiation between different knowledges, such as male and female, theoretical and practical, high-status and low-status, and European and non-European. Although written primarily as a contribution to social or socio-cultural history, this book will also be of interest to historians of science, sociologists, anthropologists, geographers and others in another age of information explosion.

There is widespread consensus in the international scientific community that climate change is happening and that abrupt and irreversible impacts are already set in motion. What part does education have to play in helping alleviate rampant climate change and in mitigating its worst effects? In this volume, contributors review and reflect upon social learning from and within their fields of educational expertise in response to the concerns over climate change. They address the contributions the field is currently making to help preempt and mitigate the environmental and social impacts of climate change, as well as how it will continue to respond to the ever changing climate situation. With a special foreword by Desmond Tutu, Archbishop Emeritus of Cape Town.

**On the Frailty of Human Bonds** Taylor & Francis

This book is about the central figure of our contemporary, 'liquid modern' times – the man or woman with no bonds, and particularly with none of the fixed or durable bonds that would allow the effort of self-definition and self-assertion to come to a rest. Having no permanent bonds, the denizen of our liquid modern society must tie whatever bonds they can to engage with others, using their own wits, skill and dedication. But none of these bonds are guaranteed to last. Moreover, they must be tied loosely so that they can be untied again, quickly and as effortlessly as possible, when circumstances change – as they surely will in our liquid modern society, over and over again. The uncanny frailty of human bonds, the feeling of insecurity that frailty inspires, and the conflicting desires to tighten the bonds yet keep them loose, are the principal themes of this important new book by Zygmunt Bauman, one of the most original and influential social thinkers of our time. It will be of great interest to students and scholars in sociology and in the social sciences and humanities generally, and it will appeal to anyone interested in the changing nature of human relationships.
