Resources. Khan Academy for Organic Chemistry NDSU Chemistry and Biochemistry The pH scale is a logarithmic scale representing the concentration of H⁺ ions in a solution. Remember that as the H⁺ concentration increases the OH⁻ concentration decreases and vice versa .If we have a solution with one in every ten molecules being H⁺, we refer to the concentration of H⁺ ions as 1/10. Remember from algebra that we can write a fraction as a negative exponent, thus 1/10 ... CHEMISTRY II: WATER AND ORGANIC MOLECULES Learn organic chemistry ii functional groups with free interactive flashcards. Choose from 500 different sets of organic chemistry ii functional groups flashcards on Quizlet. organic chemistry ii functional groups Flashcards and ... Functional groups in organic compounds. Functional groups are structural units within organic compounds that are defined by specific bonding arrangements between specific atoms. The structure of capsaicin, the compound responsible for the heat in peppers, incorporates several functional groups, labeled in the figure below and explained throughout this section. 2.9: Organic Functional Groups - Chemistry LibreTexts A 1,2-rearrangement is an organic reaction where a substituent moves from one atom to another atom in a chemical compound. In a 1,2 shift the movement involves two adjacent atoms but moves over larger distances are possible. Skeletal isomerization is not normally encountered in the laboratory, but is the basis of large applications in oil ... Rearrangement reaction - Wikipedia The IUPAC system requires first that we have names for simple unbranched chains, as noted above, and second that we have names for simple alkyl groups that may be attached to the chains. Examples of some common alkyl groups are given in the following table. Note that the "ane" suffix is replaced by "yl" in naming groups. The symbol R is used to designate a generic (unspecified) alkyl group.
