Drug abuse has
become very common
among students in the
university and schools.
Drugs are being
misused by students
within the university
for various reasons.
The most common
reason being stress. To
cope with the
competition and ever
increasing work load of
the program students
resort to taking drugs
either to relieve stress
or to stay awake all
night to study. Another
reason for taking drugs

is peer pressure, the
pressure to fit in and
try something new.
Drugs have become
fashionable, are easily
available and students
take it because they
feel it is “normal”, just
like having an alcoholic
drink in a social
gathering. They usually
start with a mild drug
and then move on to
harder ones like
cocaine and heroin.
The unfortunate part in
Indian universities is
the lack of support
system for the
students. There is no
focus on creating a
positive environment
for the students to
relieve their stress and
discuss their problems.
Drugs are like a
disease taking over our
society with no end. I

am deeply concerned with this situation. I am indebted to be invited to become volunteer assistant for such an important project. We will do whatever we can to assist in this project so that it can bring resolution to this epidemic in our society.

Although any new undertaking is exciting because of the opportunities it may bring, the transition to college life also brings new pressures and uncertainties. From the shelter of home, young people emerge into a new culture, with a new environment for success. Here they are their own masters, often far from the vigilance of parents and the strictures of tightly scheduled school days. As they take this step toward independence, they face the temptation to celebrate their newfound freedom, test limits, and perhaps escape from new pressures through alcohol and other

drugs. This guide addresses three questions: (1) How serious is the problem of alcohol and other drug use among first-year students?; (2) What developmental and environmental factors make the first year of college a time of greater vulnerability?; and (3) How can prevention professionals help students successfully negotiate the sometimes perilous transition from high school to college life? at risk of developing physical and mental health problems because of their parents' addictions to alcohol and other drugs (AOD), including a chapter on the troubling increase of methamphetamine abuse by parents. More than 10 percent live in family where illicit drugs are used. Children of alcoholics are nearly 10 times more likely to develop an alcohol use disorder as other children, and often develop behavior problems such as depression, anxiety, attention deficit hyperactivity disorder, conduct disorder, and oppositional defiant disorder. Children of illicit drug abusers are more likely than other children to demonstrate immature, impulsive, or irresponsible
