*Getting the Most Out of  
Your Crm* Packt Publishing  
Have you ever looked at  
your latest personal  
computing device and  
wondered what comes  
next? Imagine a world  
where your next personal

computing device is the  
last one that you would  
ever need to buy. Where  
you would never need to  
worry about operating  
systems, software  
patches, or viruses.  
Where you always had  
enough processing power,  
memory, storage, and  
top-of-the-line graphics.  
Where you could access  
all of the very best

software applications,  
regardless of their  
platform. Where you had  
a constant connection to  
all your favourite digital  
services, and your battery  
lasted for days, perhaps  
even weeks, of full-on  
use. Sounds good, doesn't  
it? Well, this is the world  
of the Stream Tone. A  
world that does not exist  
in some far off future; this

could be, figuratively speaking, our world a mere five minutes from now. All that is needed to make it a reality is the creative convergence of certain technologies that are already available and in use today. Personal computing is changing from an old world of local services provided by local devices to a new world of remote Web-based services provided by cloud computing-based data centres. The STREAM TONE: The Future of Personal Computing? explores, in some detail,

what might be required to make a comprehensive move to this exciting new world, and the many benefits that move could bring. This book not only attempts to make a thorough evaluation of the technology ecosystem that will be required to realise this future but also considers many of the implications of such a move. Along the way, it also discusses hundreds of currently-available technologies and how they could be used to help build this future. This book has an easy-going

style that does not assume that the reader is some sort of egg head or rocket scientist. It should, therefore, be suitable for almost anyone that has an interest in what might come next in the world of personal computing. Most of the subject matter is explained in enough detail that even a technical novice should be able to understand what is being discussed. This book is the "Hello, World" tutorial for building

products, technologies, and teams in a startup environment. It's based on the experiences of the author, Yevgeniy (Jim) Brikman, as well as interviews with programmers from some of the most successful startups of the last decade, including Google, Facebook, LinkedIn, Twitter, GitHub, Stripe, Instagram, AdMob, Pinterest, and many others. Hello, Startup is a practical, how-to guide that consists of three parts: Products, Technologies, and Teams.

Although at its core, this is a book for programmers, by programmers, only Part II (Technologies) is significantly technical, while the rest should be accessible to technical and non-technical audiences alike. If you're at all interested in startups—whether you're a programmer at the beginning of your career, a seasoned developer bored with large company politics, or a manager looking to motivate your engineers—this book is for you.
