The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of

settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the

Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care

systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

It addresses central issues in the role and practice development that are fundamental to defining and differentiating the nature of this field. Topics include defining the role, role characteristics, scope of practice, education, regulation and research. Obstacles to and facilitators of that role are addressed and include ethical questions arising in the

context of practice development. With an international focus, this volume examines international developments in the field, as reflected in country-specific case studies and examples. It offers a valuable resource for advanced practice nurses, educators and administrators at healthcare institutions.

Nursing Key Topics Review: Mental Health - E-Book

This book is the report of the results of ASEAN project supported by the ASEAN Studies Center, Chulalongkorn University, to determine nursing research priorities in ASEAN. The aim of the project is to enhance the research collaboration in nursing

among ASEAN countries, as one of stepping-stones to lead the harmonization and cooperation in the ASEAN region in support of ASEAN integration and the ASEAN community. Its strategic plan aims to support regional platforms on nursing system, services, and education including human resource development towards an integrated ASEAN community.

Determining research priorities is the first step of collaborative research in nursing, particularly in response with the lack of international research collaboration in ASEAN, which can drive economic development and productivity in developing countries through the discovery of scientific

breakthroughs and innovations, as well as raise awareness of nursing issues. In turn, it can lead to capacity building in developing countries.

Measurement in Nursing and Health Research

National Academies of Medicine's nurses, an estimated 2 million strong, are often at the frontlines in confronting

environmental health hazards. Yet most nurses have not received adequate training to manage these hazards. Nursing, Health, and the Environment explores the effects that environmental hazards (including those in the workplace) have on the health of patients and communities and proposes specific strategies for preparing nurses to address them. The committee documents the magnitude of environmental hazards and discusses the importance of the relationship between nursing, health, and the environment from three broad perspectives. Practice-- The authors address environmental health issues in the nursing process, potential

controversies over nurses taking a more activist stance on environmental health issues, and more. Education--The volume presents the status of environmental health content in nursing curricula and credentialing, and specific strategies for incorporating more environmental health into nursing preparation. Research--The book includes a survey of the available knowledge base and options for expanding nursing research as it relates to environmental health hazards.

Research: The Quest

for Magnet Recognition demonstrates how direct care nurses in clinical settings can overcome their fear and conduct nursing research studies that impact and improve patient care.

Highlighting research in Magnet-designated hospitals located in all types of settings, this reference includes studies that have used quantitative, qualitative, and mixed-method designs. This text takes real nurses stories and their research abstracts and shows that staff nurses really can do research. Including helpful hints from experts like librarians, statisticians, and IRB reviewers who show the reader how to make the research journey smoother, Real Stories of Nursing Research addresses

overcoming fears of research and is an essential text for any nurse or hospital seeking magnet status.

Review:

Pathophysiology E-Book National Academies Press
Written by an international team of ophthalmic practitioners, this authoritative book is a vital resource not only for ophthalmic professionals, but for any healthcare professional who cares for patients with eye problems. In the ten years since the first edition was published, practice has moved on,

as has the evidence for practice. This second edition draws on the passion and goodwill of the original team of authors, complemented by other colleagues, to fully revise and update the text in line with new findings, new practice and new and exciting treatments. The book is broadly divided into three sections. The first section considers the structure and function of the eye, as well as the basic principles of ophthalmology and eye examination. The second section considers patient care in diverse settings, as well as work-related issues and patient education. It also includes two entirely new chapters on eye banking and global eye health. The third

section takes a systematic approach to patient care, working from the front to the back of the eye, discussing some of the common disorders affecting each structure (such as the lens or cornea) or group of structures (such as the eyelids or lacrimal drainage system). The book concludes with a very useful glossary of ophthalmic terms. Some aspects of practice discussed in the text are, of necessity, UK based, but these are clearly indicated and, wherever possible, principles (rather than specifics) are addressed and readers are directed to local policies and interpretations. The first edition of this book became a core

text for ophthalmic nursing, in particular, and for the education of ophthalmic nurses across the world. This new edition will provide a comprehensive, up-to-date, evidence-based resource for all ophthalmic healthcare professionals. Contents include:

- Physiology of vision
- Optics
- Pharmacology
- Examination of the eye
- Visual impairment
- Patient education
- Work and the eye
- Care of the adult ophthalmic patient in an inpatient setting
- The care of the child undergoing ophthalmic treatment
- Developments in day care surgery for ophthalmic patients
- Ophthalmic theatre nursing
- The care of patients presenting with acute problems

Eye banking • Global eye health • The eyelids and lacrimal drainage system • The conjunctiva • The cornea • The sclera • The lens • The uveal tract • The angle and aqueous • The retina and vitreous • The orbit and extraocular muscles • Visual and pupillary pathways and neuro-ophthalmology • The eye and systemic disease

Principles and Methods Elsevier Health Sciences

This book focuses on enabling students to understand what research is, why it is relevant in healthcare and how it should be applied in practice. It takes the reader step by step through the research process, from choosing research questions through to searching the

literature, analysing findings and presenting the final piece of work. Key features of the book are: Tips for the best practice when reading and critiquing research. Activities to test your knowledge. Key points which highlight the important topics. A companion website which includes a critical appraisal tool to use when assessing papers, multiple choice questions and free SAGE journal articles for students. Seminar plans and PowerPoint slides are provided to support lecturers in their teaching. It is essential reading for all undergraduate students of nursing, midwifery and healthcare.
