care. It will be kept by nursing students long after they graduate as a guide to resources that will be valuable throughout their nursing careers. As a home care nurse working mainly with the geriatric community, I found the resources helpful in my practice. As an instructor, I found the book to be a very useful guide for teaching geriatrics.”

Medical Reviews
 “[This] is a unique volume that effectively addresses the lack of gerontology case studies for use with undergraduate nursing students. Case studies are a pedagogically powerful approach to active learning that offer opportunities to apply content to clinical practice.”
 —The Gerontologist
 “The case narrative approach of this book

promotes active learning that is more meaningful to students (and practicing nurses) and more likely to increase the transfer of evidence into practice. An excellent resource for faculty (staff educators) to facilitate critical learning skills.” —Liz Capezuti, PhD, RN, FAAN Dr. John W. <p>York University College of Nursing Vivid case examples help guide nurses in developing appropriate interventions that include complementary and alternative health therapies and provide a basis for evaluating outcomes. Exercises interspersed throughout each case study include numerous open-ended and multiple-choice questions to facilitate learning and</p>	<p>critical thinking. The text is unique in that some of the presented cases focus on psychosocial issues such as gambling addiction, hoarding behavior, emergency preparedness, and long-distance caregiving. Cases also depict geriatric clients who are living healthy, productive lives to counter myths and negative attitudes about older adults. Scenarios</p>	<p>demonstrating ethical dilemmas prepare students to appropriately respond to “gray area” situations. Nursing Case
Studies,
Second
Edition**
Cambridge

Over the past
two decades
there has
been a

marked change in global age demographics, with the number of over-60s increasing by 82% and the number of centenarians by 715%. This new-found longevity is testament to the success of recent advances in medicine, but poses significant challenges to multiple areas of health care concerning older patients. Building upon its predecessor's reputation as the definitive resource on

the subject, this new edition of the Oxford Textbook of Geriatric Medicine offers a comprehensive and multinational examination of the field. Fully revised to reflect the current state of geriatric medicine, it examines the medical and scientific basis of clinical issues, as well as the ethical, legal, and socio-economic concerns for healthcare policy and systems. Over 170 chapters

are broken up into 16 key sections, covering topics ranging from policy and key concepts through to infection, cancer, palliative medicine, and healthy ageing. New material includes focus on the evolving concepts of malnutrition, sarcopenia, frailty, and related geriatric syndromes and integration of geriatric principles from public health,

primary and specialized care, and transitional stages from home to emergency, medicine and surgery, rehabilitation, and long term care. The Oxford Textbook of Geriatric Medicine brings together specialists from across the globe to provide every physician involved in the care of older patients with a comprehensive resource on all the clinical problems they are likely to

encounter, as well as on related psychological, philosophical, and social issues. *The Health of the Elderly in Hong Kong* Wiley-Blackwell For centuries the Roman Catholic Church has been concerned with the moral implications of medical practice. Indeed, until two decades ago, Catholic moral theologians were the major source of moral guidance, scholarly

reflection and teaching on a variety of medical-moral topics, particularly those bearing on human life. Many, not only those within the Catholic communion, turned to the Church for guidance as each new possibility for altering the conditions of human life posed new challenges to long held moral values. Two decades ago, the center of gravity of ethical reflection shifted sharply from

theologians and Christian philosophers to more secular thinkers. A confluence of forces was responsible for this metamorphosis - an exponential rate of increase in medical technologies, expanded education of the public, the growth of participatory democracy, the entry of courts and legislation into what had previously been private matters, the trend of morality

towards pluralism and individual freedom and the depreciation of church and religious doctrines generally. Most significant was the entry of professional philosophers into the debate, for the first time. It is a curious paradox that, until the mid-sixties, professional philosophers largely ignored medical ethics. Today they are the most influential shapers of

public and professional opinion.

Developing appropriate responses to an ageing population is recognized by policy makers throughout the developed world as a top priority, as is the vital contribution

made by family caregivers. However, cultural, demographic and organizational differences between countries have encouraged diverse patterns of response to this common challenge. This book provides a systematic cross-cultural analysis of contemporary patterns and future trends in all major countries of the European Union. Additional interest is provided by

including Poland emerging from the post-Communist block as the country at the forefront for joining the European Union. The book should be useful to European policy makers and academies involved in studying the health and social care needs of older people and the capacity, contribution and needs of family caregivers who provide care to older people. The book is also

relevant for policy makers and researchers in other countries, mostly in North America and Australia who wish to study European approaches to supporting older people and family caregivers. *A Text Book of Clinical Pharmacy Practice* Springer Science & Business Media Addresses the needs of the undergraduate nurse by presenting a series of classic case

studies in nursing. Lecture Notes on Geriatrics Academic Press The new edition of the best-selling Lecture Notes title is a concise introduction to clinical biochemistry that presents the fundamental science underpinning common biochemical investigations used in clinical practice. Lecture Notes: Clinical Biochemistry allows the reader to make efficient and informed

use of the diagnostic services offered by their clinical biochemistry department. The result is a text that serves as a reference to the practitioner as well as the student. The book takes a system-based approach, with the underlying physiological rationale for any test explained in the context of disruption by disease. This leads naturally to an integrated and practical understanding

of biochemical diagnostics. Including multiple choice questions (MCQs) alongside end-of-chapter case studies to help develop test-selection skills, Lecture Notes: Clinical Biochemistry provides the essential background to biochemical investigations and is an ideal course companion and revision guide for medical students, junior doctors on the Foundation Programme,

general practitioners, and nurses and laboratory technicians.

An Introduction to Gerontology

Hong Kong University Press

In an ageing population, geriatric medicine has become central to general practice, and to emergency and general internal medicine in the hospital setting. Diseases are more common in the older person, and can be particularly

difficult to assess and to treat effectively in a field that has limited evidence, yet makes up a substantial proportion of the work of most clinicians. Fully updated, this second edition of the Oxford Handbook of Geriatric Medicine includes all the information required to deliver effective geriatric care. Guidance is given on a range of key treatment areas,

indicating where practice differs from that of younger adults or is ill informed by evidence, where dangers lurk for the inexperienced clinician, and on the many ethical and clinical dilemmas common in geriatric practice. This accessible handbook is essential reading for all junior doctors and specialist trainees in geriatric medicine and general internal

medicine, and for all medical and nursing staff who manage older people.

Demographic trends confirm what clinicians already know - they are spending increasing amounts of time dealing with older people. This new ABC provides an introduction to the new and increasing challenges of

treating older patients in a variety of settings. ABC of Geriatric Medicine provides an overview of geriatric medicine in practice. Chapters are written by experts, and are based on the specialty geriatric medicine curriculum in the UK. ABC of Geriatric Medicine is a highly illustrated, informative, and practical source of knowledge, with links to further information and resources.

It is an essential guide where management of the ageing population is a major health issue - for hospital and family doctors, students, nurses and other members of the multi-disciplinary team.

Lecture Notes in Geriatrics

With an ever increasing ageing population, medical students need a concise introduction to this challenging

<p>client group. The book aims to give the reader an understanding of the physiological changes of ageing and how this results in the presentation and treatment of disease; the role of rehabilitation; the recent reorganisation of medical, social and voluntary services; how effectively to manage disease in older patients. The result is a core text that will appeal to medical students, junior doctors,</p>	<p>general practitioners and allied health professionals who want a concise introduction to the subject. <i>Caring for the Older Person</i> Orient Blackswan The number of older people in our society is increasing rapidly and as they age, the demand for safe, effective care is growing. This book offers readers the knowledge and skill to provide all aspects of care. <i>Caring for the Older Person</i> is</p>	<p>written in six sections, covering the fundamental needs of an older person: Assistance with personal cleansing Assistance with movement Assistance to maintain nutrition and fluid intake Assistance with toilet needs Assistance with the need for observation and monitoring Care of the person immediately following death Each section starts with an</p>

explanation and includes care procedures in a step-by-step format. Written by two experienced nurses, the book is systematic and evidence-based, using up-to-date knowledge and government policy. It is intended to be a practical aid to improve care for the older person, whether in hospital, care home or at home and to give the reader the confidence that the care they provide is

safe and effective. Caring for the Older Person is an essential resource for health care professionals, trainees, care assistants, or paid carers, whose work involves caring for an older person; or a lay person – someone who needs to acquire skill and confidence to care for an older friend, neighbour or relative. The Emotional and Sexual Lives of Older People Oxford University Press
