Introductory psychology courses can raise significant questions about the nature of being human. Christianity, with its emphasis on humans made in the image of God, has a clear perspective.

Psychology offers answers too, but they are often subtly implied. This introductory guide, drawn from more than fifty years of classroom experience, provides students with a coherent framework for considering psychology from a Christian perspective. The authors explore biblical themes of human nature in relation to all major areas of psychology, showing how a Christian understanding of humans can inform the study of psychology. Brief, accessible chapters correspond to standard introductory psychology textbooks, making this an excellent supplemental text. End-of-chapter questions are included. A test bank for professors is available through Baker Academic's Textbook eSources.

This thoroughly revised Seventh Edition now incorporates more examples, tables, and figures to help bring the material to life for students. The new content in this edition reflects the dynamism in the field. The text explores how race, gender, and culture issues figure in the study of personality and in personality assessment.
