Developers who want to access USB devices from their embedded systems will find a helpful resource in *USB Embedded Hosts: The Developer's Guide*. This new book from the author of *USB Complete* shows how small systems can take advantage of the same wealth of USB devices available to conventional PCs. The book begins with a review of USB host communication protocols. Readers then learn which USB host requirements are relaxed for embedded systems and what new requirements some embedded

systems must meet. To help in selecting a development platform, the book explores available hardware and software for USB host communications in small systems. The heart of the book focuses on communicating with USB devices. The topics (with example code) include USB drives, keyboards, virtual serial ports, network bridges, mics, speakers, video cameras, and printers, plus devices that don't fit defined USB classes. Also discussed are systems that support both USB host and device functions. The example code is written for the BeagleBoard-xM open development board using a distribution of Linux targeted to small systems. Also covered is how to use Linux commands and utilities to learn

about, monitor, and debug communications with USB devices.

This 2006 book presents the geometrical ideas of structure at the atomic level that are being developed and integrated into materials science. Emphasis is placed on the intuitive understanding of geometrical principles through illustrations not detailed computation. This book will appeal to those working in crystallography, solid-state science and materials science.

100% pure MR imaging of the CNS...comprehensive, up to date, essential The imaging quality achievable in MR imaging today was inconceivable just a few years ago. No other subdiscipline has evolved so swiftly while placing ever-greater emphasis on fast and accurate results. This book is intended as an indispensable tool at the workplace, as reference for image interpretation, and even for fast orientation during the examination. Adjunct information is provided that fosters the dialogue with referring physicians: for most diseases and conditions there are summaries of epidemiology, clinical findings, pathogenesis and pathophysiology, as well as basic therapy concepts. Special

features: A fast-reference guide, even in tricky cases-differential diagnosis made easy, with high clinical relevance Tips for organizing examinations Reference images for comparison with actual images A reference book for looking up equivocal findings More than 1,300 vivid, high-resolution images from the latest generation of scanners Coverage of peripheral nervous system diseases and MR neurography Answers to questions such as: What technique is best for answering a specific question? What does normal anatomy look like, and what landmarks should be sought? Which differential diagnoses should I consider? What are the optimal equipment settings at my workplace? What therapeutic options does interventional radiology provide? For all radiologists in hospital or office settings, also for neurologists and neurosurgeons.

This volume covers recent research on all aspects of degenerative retinal diseases including genetics, cell and molecular biology, and clinical and diagnostic studies, as well as research into retinal implants containing electronic chip technology being developed to restore vision in eyes that have lost photoreceptor cells. There is a strong emphasis on the molecular genetic approach to understanding these disorders. Several chapters present important new insights into the mechanism of photoreceptor degeneration and cell death. A number of the studies presented are targeted at

retarding or reversing the degeneration process. A variety of diagnostic, clinical, histopathological, and physiological assessments of retinal degeneration in patients are also included. The scope, depth, and variety of approaches toward investigating these disorders, their prevention and progress toward sight restoration, make this volume the most up-to-date compendium covering this rapidly progressing field.
