In today's competitive marketplace with
its focus on profit, maintaining integrity
can often be a challenge. Further
complicating this challenge is the fact that
those assigned to the task of assuring
accountability within an organization often
have little, if any, visibility into the inner
workings of that organization. Oracle

Identity Management: Governance, Risk,
and Compliance Architecture is the
definitive guide for corporate stewards
who are struggling with the challenge of
meeting regulatory compliance pressures
while embarking on the path of process
and system remediation. The text is
written by Marlin Pohlman, a director with
Oracle who is recognized as one of the
primary educators worldwide on identity
management, regulatory compliance, and
corporate governance. In the book's first
chapters, Dr. Pohlman examines
multinational regulations and delves into
the nature of governance, risk, and

compliance. He also cites common
standards, illustrating a number of well-
known compliance frameworks. He then
focuses on specific software components
that will enable secure business
operations. To complete the picture, he
discusses elements of the Oracle
architecture, which permit reporting
essential to the regulatory compliance
process, and the vaulting solutions and
data hubs, which collect, enforce, and
store policy information. Examining case
studies from the five most regulated
business verticals, financial services,
retail, pharma-life sciences, higher

education, and the US public sector, this work teaches corporation stewards how to: Attain and maintain high levels of integrity Eliminate redundancy and excessive expense in identity management Map solutions directly to region and legislation Hold providers accountable for contracted services Identity management is the first line of defense in the corporate internal ecosystem. Reconciling theory and practicality, this volume makes sure that defense is workable, responsive, and effective.

Organizations increasingly need to deal with unstructured processes that traditional business process management

(BPM) suites are not designed to deal with. High-risk, yet high-value, loan origination or credit approvals, police investigations, and healthcare patient treatment are just a few examples of areas where a level of uncertainty makes outc

Information Systems for Sustainable Development provides a survey on approaches to information systems supporting sustainable development in the private or public sector. It also documents

and encourages the first steps of environmental information processing towards this more comprehensive goal. Always-On Enterprise Information Systems for Business Continuance: Technologies for Reliable and Scalable Operations Peter Gbolagade Akintunde

Oracle is the most popular database management system in use today, and PL/SQL plays a pivotal role in current and projected Oracle products and applications. PL/SQL is a programming language providing procedural extensions to the SQL relational database language and to an ever-growing number of oracle development tools. originally a rather limited tool, PL/SQL became with Oracle7 a mature and effective language for developers. now, with the introduction of Oracle8, PL/SQL has taken the next step towards becoming a fully realized programming language providing sophisticated object-oriented capabilities. Steven Feuerstein's Oracle PL/SQL Programming is a comprehensive guide to building applications with PL/SQL. That book has become the bible for PL/SQL developers who have raved about its completeness, readability, and

practicality. Built-in packages are collections of PL/SQL objects built by Oracle Corporation and stored directly in the Oracle database. The functionality of these packages is available from any programming environment that can call PL/SQL stored procedures, including Visual Basic, Oracle Developer/2000, Oracle Application Server (for web-based development), and, of course, the Oracle database itself. Built-in packages extend the capabilities and power of PL/SQL in many significant ways. for example: DBMS_SQL executes dynamically constructed SQL statements and PL/SQL blocks of code. DBMS_PIPE communicates between different Oracle sessions through a pipe in the RDBMS shared memory. DBMS_JOB submits and manages regularly scheduled jobs for execution inside the database. DBMS_LOB accesses and manipulates Oracle8's large objects (LOBs) from within PL/SQL programs. The first edition of Oracle PL/SQL Programming contained a chapter on Oracle's built-in packages. but there is much more to say about the basic PL/SQL packages than Feuerstein could fit in his first book. In addition, now that Oracle8 has been

released, there are many new Oracle8 built-in packages not described in the PL/SQL book. There are also packages extensions for specific oracle environments such as distributed database. hence this book. Oracle Built-in Packages pulls together information about how to use the calling interface (API) to Oracle's Built-in Packages, and provides extensive examples on using the built-in packages effectively. The windows diskette included with the book contains the companion guide, an online tool developed by RevealNet, Inc., that provides point-and-click access to the many files of source code and online documentation developed by the authors. The table of contents follows:

Crafting Interpreters IGI Global Sustainability is a concept that unifies the environment, economy, and society, and has spread as a key concept in enterprise management. The United Nations adopted the Sustainable Development Goals

(SDGs) in 2015, which require worldwide efforts to reach a sustainable society, and also applies to private enterprises. Sustainability should be developed in connection with management strategy, and Asia's role, including that of Japan, is important to improve global sustainability. This book addresses how sustainability management in the Asian context is currently practised and proposes practices for the future. Investigation of the effect of business domain characteristics on the integration of sustainability and management, and elucidation of the process and features of EMCS (Environmental Management Control System) inside and outside of companies have been indicated. The book points that companies need to use and design Sustainability Management Control Systems in order to implement a CSR (Corporate Social Responsibility) strategy and match employees' behavior to CSR activities. MFCA (Material Flow Cost Accounting) has started to expand rapidly into other Asian industries from Japan as a method of Environmental Management Control. The fundamental idea and

procedure of MFCA and many case examples of Japanese MFCA have been reported. These findings help us to consider a policy for continuous use of MFCA. Moreover, the relationship between Toyota Production System and MFCA has been explained and 'Material Flow Time Costing' as a new management accounting concept is proposed. Based on the literature review, the study has made recommendations for Asian companies' strategic management and governmental policy-making to improve both quality and quantity of sustainability disclosure in Asia. One of the papers has identified the development and implementation of social and environmental accounting by Indonesian state-owned enterprises and their determining factors. In a Japanese manufacture, the effect of smoothed production has been analyzed as an example of environmental management. This led to an increase in production quality without additional capital spending.

In order to meet high standard of Springer's Advances in Intelligent and Soft Computing, the organization committee has made their efforts to do the following things. Firstly, poor quality paper has been refused after reviewing course by anonymous referee experts. Secondly, periodically review meetings have been held around the reviewers about five times for exchanging reviewing suggestions. Finally, the conference organization had several preliminary sessions before the conference. Through efforts of different people and departments, the conference will be successful and fruitful. We hope that you can get much more knowledges from our CSISE2011, and we also hope

that you can give us good suggestions to improve our work in the future.
