An introduction to Leonardo da Vinci's genius focusing on his famous notebook sketches and the modern inventions they predicted. In 1781, Thomas Paine came up with a model for a single-span bridge; in 1887, Adolf Eugen Fick made the first pair of contact lenses; and in 1907, Paul Cornu built the first helicopter. But

Leonardo da Vinci thought of all these ideas more than five hundred years ago! At once an artist, inventor, engineer, and scientist, da Vinci wrote and drew detailed descriptions of what would later become hang gliders, automobiles, robots, and much more. In *Neo Geo*, Gene Barretta cleverly shows how Leonardo's ideas—many inspired by his love of nature—foreshadowed modern inventions, offering a window into the future.

The #1 New York Times bestseller from Walter Isaacson brings Leonardo da Vinci to life in this exciting new biography that is “a study in creativity: how to define it, how to achieve it...Most important, it is a powerful story of an exhilarating mind and

life” (The New Yorker). Based on thousands of pages from Leonardo da Vinci’s astonishing notebooks and new discoveries about his life and work, Walter Isaacson “deftly reveals an intimate Leonardo” (San Francisco Chronicle) in a narrative that connects his art to his science. He shows how Leonardo’s genius was based on skills we can improve in ourselves, such as passionate curiosity, careful observation, and an imagination so playful that it flirted with fantasy. He produced the two most famous paintings in history, The Last Supper and the Mona Lisa. With a passion that sometimes became obsessive, he pursued innovative studies of anatomy, fossils, birds,

the heart, flying machines, botany, geology, and weaponry. He explored the math of optics, showed how light rays strike the cornea, and produced illusions of changing perspectives in *The Last Supper*. His ability to stand at the crossroads of the humanities and the sciences, made iconic by his drawing of *Vitruvian Man*, made him history's most creative genius. In the "luminous" (*Daily Beast*) Leonardo da Vinci, Isaacson describes how Leonardo's delight at combining diverse passions remains the ultimate recipe for creativity. So, too, does his ease at being a bit of a misfit: illegitimate, gay, vegetarian, left-handed, easily distracted, and at

times heretical. His life should remind us of the importance to be imaginative and, like talented rebels in any era, to think different. Here, da Vinci "comes to life in all his remarkable brilliance and oddity in Walter Isaacson's ambitious new biography...a vigorous, insightful portrait" (*The Washington Post*). Penguin Workshop

Over the past several decades, commercial air traffic has been growing at a far greater rate than airport capacity, causing airports to become increasingly congested. How can we accommodate this increased traffic and at the same time alleviate traffic delays resulting from congestion? The response outside the US has been to set a

maximum number of slots and use administrative procedures to allocate these among competing airlines, with the most important consideration being 'grandfather rights' to existing carriers. The United States, on the other hand, has used administrative procedures to allocate slots at only four airports. In all other cases, flights have been handled on a first-come, first-served basis, with aircraft queuing for the privilege of landing or taking off from a congested airport. While recognizing the advantages of slot systems in lessening delays, economists have criticized both approaches as being sub-optimal, and have

advocated procedures such as slot auctions, peak-load pricing and slot trading to better utilize congested airports. Edited by an international team of air transport economists and drawing on an impressive list of contributors, Airport Slots provides an extremely comprehensive treatment of the subject. It considers the methods currently used to allocate slots and applies economic analysis to each. The book then explains various schemes to increase public welfare by taxing or pricing congestion, and describes alternate slot-allocation schemes, most notably slot auctions. In addition, Airport Slots outlines the

complexities involved in slot-allocation methods, including the requirement for multiple slots - a take-off slot at London Heathrow is useless unless there is a landing slot available at Frankfurt for a London Frankfurt flight. Finally, the book explores the economic pitfalls of slot-allocation schemes; for example, controls may not be required if external delay costs are internalized by a dominant carrier at its hub. *Airport Slots* provides a valuable contribution to the debate on how best to limit airport congestion. The book's comprehensive treatment of the subject matter provides the reader with a 'one-stop' volume to explore

airport congestion and slot-allocation schemes, offering valuable insights to academics and practitioners alike. *Leonardo Da Vinci for Pack* Thomas Nelson This inspiring and inventive guide teaches readers how to develop their full potential by following the example of the greatest genius of all time, Leonardo da Vinci. This is the first book dedicated to Leonardo da Vincis commission

for The Virgin of the Rocks. Leonardo completed fewer than twenty paintings in his lifetime, yet he returned twice to this same mysterious subject over the course of a twenty-five year period. Identical in terms of iconography, stylistically these paintings are worlds apart. The first, of c.1482-4, was Leonardos magnum opus, catapulting the young artist from obscurity to fame. When, in 1508, he finished the second painting, he was nearing the end of his artistic career and had become an international celebrity. Why did he revisit The Virgin of the Rocks? What was the meaning behind the cavernous subterranean landscape? What lies

behind the colder monumentality of the second version? This book opens up Leonardos world, setting the scene in Republican Florence and the humanist court of the Milanese warlord Ludovico Sforza, to answer these questions. Through lyrical yet scholarly analyses of Leonardos paintings, notebooks and technical experimentation, it unveils the secret realms of human dissection and Neo-Platonic philosophy that inspired the creation of the two masterpieces. In doing so, the book reveals that The Virgin of the Rocks holds the key to the greatest philosophical, scientific and personal transformations of Leonardos life. Images

An unwanted child. A brilliant genius. Born in 1452 to a peasant woman and a country gentleman, Leonardo da Vinci was one of the most amazing people who ever lived. He grew up to be a great painter, sculptor, architect, scientist, and inventor. As a boy, Leonardo was apprenticed to a famous artist. But he quickly became more skillful than his teacher, and his passionate interests went far beyond art. Fascinated with the human body, he carried out his own

experiments in secret. He filled thousands of pages with plans for incredible inventions including a submarine, an air-cooling system, "glasses to see the moon large," and even a flying machine!
