What Educators Need

to Know Rainbow Bridge Publishing

The main purpose of this study is to determine the level of use of primary sources in the 6th Grade Social Studies Course Books. The "document analysis" method from among the qualitative research methods was used in the study. The study was conducted on 4 books from among the Social Studies course books published by total of 6 Publishing Houses accredited by the Republic of Turkey Ministry of National Education Head Council of Education and Morality. The "Primary Source Utilization List", which was prepared based on the literature review carried out by the researchers, was used for data collection. The research data were analyzed descriptively in the form

of frequency on the basis of these criteria and research questions. The findings were interpreted with supporting examples from the relevant course books. According to the results obtained at the end of the study, the image sources were used the most and the audio and the community sources the least in all course books. In terms of the fields of learning, the field in which the primary sources are used the most was the "Turks on the Silk Road". (Contains 2 tables and 6 figures.).

People, Places, and Societies Texas Speedy Publishing LLC In the 21st century, digital tools enable information to be generated faster and in greater profusion than ever before, to the point where its extent and value are literally beyond imagining. Such quantities can only be meaningfully addressed using more digital tools, and thus our relationship to information is fundamentally changed. This situation presents a particular challenge to processes of learning and teaching, and demands a response from both information professionals and educators. Enabling education in a digital environment means not only changing the form in

which learning opportunities are offered, but also enabling students to survive and prosper in digitally based learning environments. This collection brings together a global community of educators, educational researchers, librarians and IT strategists, to consider how learners need to be equipped in an educational environment that is increasingly suffused with digital technology. Traditional notions of literacy need to be challenged, and new literacies, including information literacy and IT literacy, need to be considered as foundation elements for digitally involved learners. Leading international experts from the USA, Canada, Australia, New Zealand, South Africa, Mexico and throughout Europe contribute to the debate, and Hannelore Rader, Librarian and Dean of the University Libraries, University of Louisville, Kentucky, provides the foreword. The book is in two parts: In Part 1, Literacies in the Digital Age, the contributors analyse how digital technologies have enabled transformative change in the ways in which learning can be constructed, and discuss

the nature of the new literacies that have emerged in this new virtual and e-learning environment. In Part 2, Enabling and Supporting Digital Literacies, the contributors go on to consider the ways in which digital literacies can be made available to learners, and how these literacies are being relocated in a more student-centred environment within the broader perspective of learning. Readership: This book takes the issues raised in the successful Information and IT Literacy, also co-edited by Allan Martin, into a broader context. It is essential reading for all information professionals and educators involved in developing strategies and practices for learning in a digital age.

Knopf Books for Young Readers

Organized around four commonplaces of education—learners and learning, subject matter, teachers and teaching, and classroom environment—Elementary Social Studies provides a

rich and ambitious framework to help social studies teachers achieve powerful teaching and learning results. By blending the theoretical and the practical, the authors deeply probe the basic elements of quality instruction—planning, implementation, and assessment—always with the goal of creating and supporting students who are motivated, engaged, and thoughtful. Book features and updates to the fourth edition include:

- Two new chapters on using the Inquiry Design Model (IDM) to understand inquiry-based teaching and learning and to develop IDM inquiries.
- Revised chapter on ideas and questions.
- Revised chapter on literacy to more fully incorporate media literacy and digital citizenship.
- Real-classroom narratives introduce chapters and provide in-depth access to teaching and learning contexts.
- Practical curriculum and resource suggestions for the social studies classroom.
- End-of-chapter summaries and annotated teaching resources.

Despite technology's presence in virtually every public school, its documented familiarity and use by youth outside of school, and the wealth of resources it provides for teaching social studies, there has been relatively little empirical research on its effectiveness for the teaching and learning of social studies. In an effort to begin to fill this gap in research literature, this book focuses on research on technology in social studies education. The objectives of this volume are threefold: to describe research frameworks, provide examples of

empirical research, and chart a course for future research endeavors.

Accordingly, the volume is divided into three overarching sections: research constructs and contexts, research reports, and research reviews. The need for research is particularly acute within the field of social studies and technology. As the primary purpose of social studies is to prepare the young people of today to be the citizens of tomorrow, it is necessary to examine how technology tools impact, improve, and otherwise affect teaching and learning in social studies. Given these circumstances, we have prepared this collection of research

conceptualizations, reports, and reviews to achieve three goals. 1. Put forward reports on how research is being conducted in the field 2. Present findings from well-designed research studies that provide evidence of how specific applications of technology are affecting teaching and learning in social studies. 3. Showcase reviews of research in social studies It is with this framework that we edited this volume, Research on

Technology and Social Studies Education, as an effort to address emerging concerns related to theorizing about the field and reporting research in social studies and technology. The book is divided into four sections. The first section of the book includes three descriptions of research constructs and contexts in social studies and technology. The second section is focused on research reports from studies of student learning in social studies with technology. The third section contains research reports on teachers' pedagogical considerations for using technology in social studies. In the fourth and final section, we present work that broadly reviews and critiques research in focused areas of social studies and technology. This volume contains twelve chapters, each of which focuses on social studies content and pedagogy and how the field is affected and enhanced with technology. The volume

includes research and theoretical works on various topics, including digital history, digital video, geography, technology use in the K-12 social studies classroom, and artificial intelligence.

Using Grading to Support Student Learning offers an accessible foundation for using grading practices to support student learning through classroom assessment. Purposeful, defensible grading and reporting mechanisms cannot be neglected in today's reform climate, and new approaches are needed to understand and refine the roles of homework, formative and summative assessments, and standards across grade levels. Evidence-based and full of illustrative examples, this book bridges research and theory on grading and assessment with classroom practices for pre-service and in-service teachers and fresh perspectives for educational researchers studying grading practices.
