The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. *Human Dimension and Interior Space* is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from

residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With *Human Dimension and Interior Space*, these standards are now accessible to all designers of interior environments.

The Big Tiny Mendon Cottage Books
Whether you've always dreamed of building your own home, or can't find the right house from among the dozens you've toured, this collection of ultimate plans can help you achieve the home of your dreams. You could have an architect create a one-of-a-kind home for you, but the design services alone could end up costing up to 15 percent of the cost of construction--a hefty premium for any building project. *Ultimate Book of Home Plans* allows you to select from 730 of the most popular designs from the country's top architects and designers, for a fraction of the cost. More than 550 gorgeous, full-color photographs and 1,600 illustrations allow you to experience homes actually built from the designs, plus some interiors. Virtually every home style is offered, including farmhouses, country

cottages, contemporaries, luxury estates, vacation retreats, and regional specialties. Get practical tips and advice on everything from selecting a site and hiring a contractor to adding finishing touches like trimwork and landscaping. Once you've selected your dream home, you can obtain easily customizable construction blueprints, cost estimates, materials lists, and CAD files.

Late Victorian House Designs Notion Press

You can use this book to design a house for yourself with your family; you can use it to work with your neighbors to improve your town and neighborhood; you can use it to design an office, or a workshop, or a public building. And you can use it to guide you in the actual process of construction. After a ten-year silence, Christopher Alexander and his colleagues at the Center for Environmental Structure are now publishing a major statement in the form of three books which will, in their words, "lay the basis for an entirely new approach to architecture, building and planning, which will we hope replace existing ideas and practices entirely." The three books are *The Timeless Way of Building*, *The Oregon Experiment*, and this book, *A Pattern Language*. At the core of these books is the idea that people should design for themselves their own houses, streets, and communities. This idea may be radical (it implies a radical transformation of the architectural profession) but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people. At the core of the books, too, is the point that in designing their environments people always rely on certain "languages," which, like the languages we speak, allow them to

articulate and communicate an infinite variety of designs within a forma system which gives them coherence. This book provides a language of this kind. It will enable a person to make a design for almost any kind of building, or any part of the built environment. "Patterns," the units of this language, are answers to design problems (How high should a window sill be? How many stories should a building have? How much space in a neighborhood should be devoted to grass and trees?). More than 250 of the patterns in this pattern language are given: each consists of a problem statement, a discussion of the problem with an illustration, and a solution. As the authors say in their introduction, many of the patterns are archetypal, so deeply rooted in the nature of things that it seems likely that they will be a part of human nature, and human action, as much in five hundred years as they are today.

Build Your Own Brick House follows the process of a self-build, using traditional brick and block techniques, enabling the self-builder to understand both the individual stages and the nature of the build as a whole. It takes a practical approach, focusing on the best use of time, abilities and budget, and on communicating more clearly and effectively with designers and tradespeople in order to make the build as smooth as possible. The book covers: The possibilities and practicalities of building in brick; Making a budget and finding/buying a plot; Designing with brick; Obtaining planning permission and Building Regulations approval; Employing both a main contractor and subcontractors. Each stage of the build is covered, from foundations through the walls, roof, interiors and services, up to completion of a project and troubleshooting. An essential and practical manual for the self-builder, and packed with tips and tools to help the self-builder understand the individual stages and the nature of the build as a whole. Fully illustrated with 250 colour photographs. Gerald Cole is the consulting editor of *SelfBuild & Design* magazine and has completed his own self-build.

Part how-to, part personal memoir, *The Big Tiny* is an utterly seductive meditation on the benefits of slowing down, scaling back, and appreciating the truly important things in life. More than

ten years ago, a near-death experience abruptly reminded sustainability advocate and pioneer Dee Williams that life is short. So, she sold her sprawling home and built an eighty-four-square-foot house—on her own, from the ground up. Today, Williams can list everything she owns on one sheet of paper, her monthly housekeeping bills amount to about eight dollars, and it takes her about ten minutes to clean the entire house. Adapting a new lifestyle left her with the ultimate luxury—more time to spend with friends and family—and gave her the freedom to head out for adventure at a moment's notice, or watch the clouds and sunset while drinking a beer on her (yes, tiny) front porch.

With rich photography and insightful commentary, this Thai architecture and interior design book showcases some of the finest modern masterpieces in Southeast Asia. A tremendous body of sophisticated and sensitively designed architectural work has been produced in Thailand in the first decade of the 21st century. The 25 houses in *The Modern Thai House* illustrate the radical new ideas coming from a dynamic younger generation of architects who are producing work comparable with and sometimes even surpassing the very best architecture in the world. Most of these architects were trained in the U.S. or U.K. and reflect not only American and European sensibilities but also affinities with their contemporaries in Asia—including Japan, China, Singapore, and Bali—all hotbeds for innovation in modern design. The houses in this book are readily accessible from Bangkok, Phuket, and Chiangmai. They reflect a wide variety of concerns and solutions,

such as: sustainability; responses to climate; strategies for cooling with minimal electricity; openness versus security in a large metropolis such as Bangkok; cultural sensitivity and responsiveness, as evidenced in a "three-generation house," built for a society in which the extended family is still prevalent; and cultural memory, as in the use of elements such as pilings, verandahs, and steeply pitched roofs with large overhangs that echo traditional Thai designs. Nurtured by an increasingly knowledgeable and wealthy clientele, modern architecture in Thailand is emerging with a variety of innovative architectural expressions.

The Floor Plan Manual Housing has for decades been a seminal work in the field of architecture. In its 5th, revised and expanded edition, approximately 160 international housing projects built after 1945 are documented and analyzed. The focus is on exemplary and transferrable projects, and on innovative and trendsetting concepts. The systematic representation of all projects allows the reader to compare and evaluate various floor plans - and to be inspired by the wealth of ideas and strategies for one's own design work. The introductory theoretical and historical essays have been newly written or updated, and offer a structured overview of the residential housing typology and its development.
