*GHQ Liaison Regiment: A Nominal Roll with Short Biographies* Routledge  
 EU Private Law and the CISG examines selected EU directives in the field of private law and their effects on the national private law systems of several EU Member States and discusses certain specific concepts of the United Nations Convention on Contracts for the

International Sale of Goods (CISG) in light of the CISG's recent fortieth anniversary. The most prominent influence of EU law on national private law systems is in the area of the law of obligations, thus the book focuses on several EU private law directives that cover the issues belonging to contract and tort law, as interpreted in the case law of the Court of Justice of the EU. EU private law concepts need to be interpreted autonomously and uniformly rather than through the lens of national private law systems. The same is true for the CISG which has not only been one of the most successful instruments of the international trade law unification but had also influenced both the EU private law and domestic laws. In Part I, focused on the EU private law and its effects for national laws, chapters examine the recent Digital Content and Services Directive and its likely impact on the contract law of the UK and Ireland, the role aggressive commercial practices play in EU banking and credit legislation, the applicability of the EU private international law rules to collective redress, the unfair contract terms regime of the Late Payment Directive and its transposition into Croatian law, the implementation of the Commercial Agency Directive in Denmark, Estonia and Germany, and disgorgement of profits as remedy provided in the Trade Secrets Directive. In Part II, dealing with selected CISG issues, chapters discuss the autonomous interpretation of CISG's concept of sale by auction and its notion of intellectual property, as well as the CISG's principle of freedom of form and the possibility for reservations with the effect of its exclusion. The book will be of interest to legal scholars in the field of EU private law and international trade law, as well as to the students, practitioners, members of law reform bodies, and civil servants in Europe, and beyond.

*Recording Industry Sourcebook* John Wiley & Sons

This book is intended to introduce the principles of the Event-Driven and Service-Oriented Architecture (SOA 2.0) and its role in the new interconnected world based on the cloud computing architecture paradigm. In this new context, the concept of "service" is widely applied to the hardware and software resources available in the new generation of the Internet. The authors focus on how current and future SOA technologies provide the basis for the smart management of the service model provided by the Platform as a Service (PaaS) layer.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

**Warranties and Disclaimers: Limitations of Liability in Consumer-Related Transactions** Walter de Gruyter

Pettus shows how a specific sequencing of resource decisions will allow firms in any industry to grow faster than competitors despite environmental shocks.

Springer

The rules presented in this volume of "Principles of European Law" deal with service contracts. The economic importance of service contracts within the European Union is enormous. The European Commission recently estimated that services account for some 50% of EU GDP and for some 60% of employment in the Union – though an exact figure is hard to determine given that many services are provided by manufacturers of goods. According to the European Commission, many services appear in official statistics as manufacturing activity, meaning that the role of services in the economy is often significantly underestimated.

*Monthly Catalogue, United States Public Documents* Greenwood Publishing Group

This book offers a commentary on the responses to white collar crime since the financial crisis. The book brings together experts from academia and practice to analyse the legal and policy responses that have been put in place following the 2008 financial crisis. The book looks at a range of topics including: the low priority and resources allocated to fraud; EU regulatory efforts to fight financial crime; protecting whistleblowers in the financial industry; the criminality of the rogue trader; the evolution of financial crime in cryptocurrencies; and the levying of financial penalties against banks and corporations by the US Department of Justice and Securities and Exchange Commission.

*Counsel of the Department of Justice* Final issue of each volume includes table of cases reported in the volume.

*PC Mag*

Maximum PC is the magazine that every computer fanatic, PC gamer or content creator must read. Each and every issue is packed with punishing product reviews, insightful and innovative how-to stories and the illuminating technical articles that enthusiasts crave.

**Smart SOA Platforms in Cloud Computing Architectures**

As the volume of international business transactions continues to grow dramatically, and as trade relations develop between an ever-increasing number of countries, it is inevitable that many questions of comparative business risk and liability should arise. What common elements underlie the various methods of limiting product liability applied in different national jurisdictions? How do different legal regimes protect the legitimate rights of consumers? These were the fundamental questions addressed by a well-attended seminar on warranties and disclaimers held within the framework of the 2000 Annual Conference of the International Bar Association in Amsterdam. The seminar – jointly sponsored by IBA Committees S (Products, Liability, Advertising, Unfair Competition and Consumer Affairs), M (International Sales and Related Commercial Transactions) and CC (Corporate Counsel) – consisted of four introductory summaries and 33 country reports by local practitioners. The presentations focused on many important issues, including the following: legal and contractual warranties in contracts for the supply of goods or services between manufacturers, distributors and end-users; methods of communicating disclaimers and limitations of liability; strategies for securing limitations of liability downstream; and variations in the legal effectiveness of disclaimers and limitations. This wealth of material has been compiled and reproduced in this remarkably useful book. Business lawyers will find its insights immensely valuable, whether they are drafting contracts or dealing with potential or actual liabilities virtually anywhere in the world.

**Developing Your Firm's Resources to Achieve Profitability Without Cost Cutting**

Addresses the liability and risk issues that arise at each successive stage of the relationship between lenders and borrowers or guarantors. This work adopts a practical, transaction-based approach, examining the different stages of the

relationship in turn and the legal issues that arise along the way. It also gives guidance on breach of loans.

#### 6th International ICST Conference on Heterogeneous Networking for Quality,

#### Reliability, Security and Robustness, QShine 2009 and 3rd International Workshop on Advanced Architectures and Algorithms for Internet Delivery and Applications, AAA-IDEA 2009

This volume presents the proceedings of the 6th International ICST Conference on Heterogeneous Networking for Quality, Reliability, Security and Robustness and of the Third International ICST Workshop on Advanced Architectures and Algorithms for Internet DELivery and Applications. Both events were held in Las Palmas de Gran Canaria in November 2009. To each of these events is devoted a specific part of the volume. The first part is dedicated to the proceedings of ICST QShine 2009. The first four chapters deal with new issues concerning the quality of service in IP-based telephony and multimedia. A

second set of four chapters addresses some important research problems in multi-hop wireless networks, with a special emphasis on the problems of routing. The following three papers deal with recent advances in the field of data management and area coverage in sensor networks, while a fourth set of chapters deals with mobility and context-aware services. The fifth set of chapters contains new works in the area of Internet delivery and switching systems. The following chapters of the QShine part of the volume are devoted to papers in the areas of resource management in wireless networks, overlay, P2P and SOA architectures. Some works also deal with the optimization of quality of service and energy consumption in WLAN and sensor networks and on the design of a mobility support in mesh networks.
