technology into a therapeutic agent. This book covers downstream processing which includes design of processes to manufacture the formulation, formulation design, fill and finish into closure systems and routes of administration. Monoclonal Antibodies: Meeting the Challenges in ... Monoclonal antibody products have greater regulatory success than other drug classes, but all biodefense products share common regulatory risks. Monoclonal antibodies, in general, do not carry as much regulatory risk as other medical countermeasures, and the FDA has recent and historical experience with evaluating mAb products. Next-Generation Monoclonal Antibodies: Challenges and ... Monoclonal Antibodies discusses the challenges and issues revolving around development of a monoclonal antibody produced by recombinant DNA technology into a therapeutic agent. This book covers downstream processing which includes design of processes to manufacture the formulation, fill and finish into closure systems and routes of administration. Amazon.com:
