This book presents the "New Vision 2050," which adds the concept of the "platinum society" to the "Vision 2050". The 20th century was a century in which energy led the development of material civilization, resulting in depletion of resources, global warming and climate change. What form should sustainable material and energy take to protect the Earth? The "Vision 2050" was established 20 years ago as a model that we should pursue for the next half century. Fortunately, the world is on course for the Vision 2050. The 21st century will be a century in which we seek qualitative richness, with the Vision 2050 as the material basis. That is, a "platinum society" that has resource self-sufficiency and resource symbiosis, and where people remain active throughout their lives and have a wide range of choices and opportunities for free participation. Since the author presented the concept of "Vision 2050" in 1999, the idea has been introduced in two books entitled *Vision 2050: Roadmap for a Sustainable Earth* (2008) and *Beyond the Limits to Growth: New Ideas for*

Sustainability from Japan (2014). The latter includes a chapter that sheds light on the concept of a "platinum society". In this publication, the author presents the "New Vision 2050" in more detail.

A Gangster & A Baller (A Tale Of 2 Big Homies) is the powerful conclusion to the Platinum Dreams trilogy. It includes the screenplay, the official soundtrack, & the 3rd episode from Tyrone Pierson's new Atlanta based sitcom "Son Of Superman". When Tyreal North gets out of prison, he hopes to STAY out of prison, & sell his television show. In search of a better life, he moves to Atlanta, & ends up meeting two big homies. One of them is a Gangster from California, & the other one is a Baller from Minneapolis. The Baller doesn't want him associating with the Gangster, & the Gangster doesn't want him socializing with the Baller. Eventually, Tyreal realizes the Baller represents God in his life, & the Gangster represents the devil in his life. And they're competing for his soul. After Tyreal starts a secret society for Alpha Males, he meets a Alpha Feminist, who appears to be the dream wife from hell. With one foot in the church, & the other foot in the street, Tyreal works in the day, & hustles at night, until he's able to secure his dream job at Turner Broadcasting System. The Baller is happy for him, but the Gangster attempts to sabotage his victory. When it builds up to a spiritual showdown between good & evil, there are multiple casualties, but Tyreal is able to come out victorious. "A Gangster & A Baller" surgically interlocks the lives of a Angel, a Demon, a Super Hero, a War Hero, & a Drug War Survivor, as it professionally articulates how far a man must go to bulletproof his Dreams & survive spiritual warfare. From near-death experiences & conspiracy theories, to gang activity & paranormal activity, this is unequivocally... one of the most awesome success stories ever written!!

This book details the battle one must fight to be an independent thinker, showing how an honest reassessment of what it means to be a professional in today's corporate society can be remarkably liberating. Poignant examples from the world of work reveal the workplace as a battleground for the very identity of the individual. Schmidt contends that professional work is inherently political—that the unstated duty of professionals is to maintain strict "ideological discipline." Career dissatisfaction evolves as workers lose control over the political component of their creative work. After reading this insightful book, no one who works for a living will ever think the same way about their job. Jeff Schmidt lives in Washington, D.C., where he is an editor for *Physics Today*.

This second edition has the same content as the first edition but includes testimonials and additional submissions from teachers and parents. The Discipline without Stress® Teaching Model is used around the world. The non-coercive (yet non-permissive) approach to promoting responsible behaviour and motivation for learning is totally different from current approaches that use rewards

for appropriate behaviour and coercive threats and punishments. The book can be used across the entire teaching spectrum -- in small childcare centres to large high schools and in rural, suburban and urban schools. It can be used in any home or youth setting.

This book is a comprehensive overview of economic geology for the general geologist and anyone else interested in the minerals industry and the global supply of raw materials. It includes some thought-provoking statements and questions for discussion on globalisation and current practices in the minerals industry. In the second edition, all chapters have been extensively revised, and a new author has been added to increase coverage of some mineral deposits and topics. The economic issues surrounding the exploitation of mineral resources is discussed in three of the six chapters of the book. It deals with issues that are commonly addressed in current science reporting - the rate of exploitation of natural resources, the question of when or if these resources will be exhausted, the pollution and social disturbance that accompanies mining, the compromises and challenges that arise from the explosion in demand from China, India and other rapidly developing countries, and the moral issues that surround mining of metals in lesser-developed countries for consumption in the "first-world" countries. The book will be useful both as an introductory text for students in the earth sciences and a reference volume for students, teachers and researchers of geography, economics and the social sciences.

The highly dynamic world of information technology service management stresses the benefits of the quick and correct implementation of IT services. A disciplined approach relies on a separate set of assumptions and principles as an agile approach, both of which have complicated implementation processes as well as copious benefits. Combining these two approaches to enhance the effectiveness of each, while difficult, can yield exceptional dividends. *Balancing Agile and Disciplined Engineering and Management Approaches for IT Services and Software Products* is an essential publication that focuses on clarifying theoretical foundations of balanced design methods with conceptual frameworks and empirical cases. Highlighting a broad range of topics including business trends, IT service, and software development, this book is ideally designed for software engineers, software developers, programmers, information technology professionals, researchers, academicians, and students.

This issue of ECS Transactions reports on research, development, and engineering of polymer electrolyte fuel cells (PEFCs), as well as low-temperature direct-fuel cells using either anion or cation exchange membranes. It discusses diagnostic techniques and systems design for both acid and alkaline fuel cells, catalysts and membranes for acid fuel cells, and catalysts and membranes for alkaline fuel cells.

Everything Is Natural Springer

Since the early 1990s, advances in toxicology have allowed scientists to detect traces of adulterant substances in everyday products - even down to parts per billion concentrations. We can now detect the presence of harmful ingredients at levels so low that they actually cause no harm. Nonetheless, we get scared. We are now able to overreact to harmless, negligible sources of contamination and flock to 'natural', 'organic' and 'chemical-free' alternative products at elevated prices instead. This urge is driven in part by a set of interesting psychological quirks called the naturalness preference or biophilia. While exposure to many aspects of nature improves our physical and mental wellbeing, marketers are taking advantage of our naturalness preference by selling us 'organic' and 'natural' products with no functional advantage, sometimes to the detriment of the environment, and that

have the unfortunate added effect of peddling a fear of conventional products that do not make such natural connotations. This fear of chemicals, exaggerated by marketers, has led some of us to seek nature in the form of expensive consumer product, which offer almost none of the benefits of spending time outdoors in real nature (which is free of charge). We thus chase nature in the wrong form. We feel guilt, anxiety and mental stress from being coaxed into paying a hefty premium price for "natural" products that are neither safer nor more effective than conventional ones, and forget to appreciate real nature in the process. This book explores the history of chemical fears and the recent events that amplified it. It describes how consumers, teachers, doctors, lawmakers and journalists can help make better connections with the public by telling stories that are more engaging about chemistry and materials science. Written in a sympathetic way, this book explains both sides of the argument for anyone with an interest in science.

In recent years, different regions of the world have been unfortunately experiencing an increase in violent acts within various communities. For example, the United States has seen an emergence of severe violence within schools over the past two decades. This tragic phenomenon is causing administrators and practitioners to rethink teaching techniques and implement concepts of violence prevention within schools and other social organizations. *Preventing and Reducing Violence in Schools and Society* is a collection of innovative research on the evolution and implementation of nonviolence concepts within social settings in order to repent oppression and violence among global communities. The book explores the effective diffusion of violence through masterful negotiation and mediation skills as well as mentoring, counseling, and related processes. While highlighting topics including nonviolent teaching, active shooter training, and LGBT-phobia, this book is ideally designed for UN, governments and their heads, politicians, NGOs, communities riddled with gang and other violence, schools, educational leaders, social organizations, community leaders, teachers, preachers, religious leaders, mediators, peace activists, law enforcement, researchers, and students seeking current research on contemporary nonviolence techniques to facilitate change in schools and other societal environments.

International Society for Rock Mechanics compiles the list of members of the International Society for Rock Mechanics (ISRM) from several nations and dependencies (countries) around the globe. The ISRM is a non-profit organization dedicated to the study and scientific investigation of Rock Mechanics, including related fields such as geology, geophysics, soil mechanics, mining engineering, petroleum engineering, and civil engineering. Each chapter representing a country in this book includes a complete lists of its engineers and geologists that are categorized into three types: National Groups (the group that represents a country); Corresponding Members; Supporting Members; and Ordinary Members. A tally of the total number of members per country is also provided. At the end of this book, the statutes of ISRM, which was approved by the Council of ISRM on September 26, 1978, are discussed and expounded in three different languages — English, French, and German. These statutes are implemented by by-laws approved by the council.

This book is a collection of chapters based on original research dealing with issues of discipline and disciplinary practices in educational institutions. The aim of the book is to provide a scholarly and scientific perspective on the current state of discipline and disciplinary practices in schools and tertiary education settings. The issue of discipline is investigated from diverse paradigmatic and methodological perspectives, presenting empirical as well as also philosophical research. The empirical perspective includes quantitative (positivistic), qualitative (interpretive) and mixed methods (pragmatic), designs and worldviews. This book offers a ground-breaking contribution to the field of learner and student discipline, with insights into disciplinary practices and issues in educational institutions not hitherto researched, such as Technical Vocational Education and Training colleges and universities.
