A smart, romantic comedy about how finding The One doesn't always have to be love at first sight... Lavinia Ferrari is in her fifth year at Bocconi University where she studies Economics when she is introduced to a new project that will guarantee her extra credits. She's intrigued... but it means the class must team up with students from the Computer Engineering course. Lavinia has absolutely no interest in the project, and to top things off, she's paired with Seb Marconi who is less than enthusiastic. When the work begins, her friends seem to be making great progress with their partners, but Lavinia isn't having the same luck... Seb is making it quite clear that he's not interested in the project, or Lavinia, fuelling her frustration. She has no choice - they're stuck in this, and besides, she won't receive her extra credits unless they work together. Lavinia must come up with a way to convince the guy who drives her crazy to put the work in... but how? From

In the context of debates surrounding the effects of new technologies on our mental faculties, particularly the attention span, this volume addresses the notion of a deterioration of attention, and the related ideas of cognitive overload, an inability to concentrate, and attention deficit

disorder. Through a new conceptualization of attention based not on individualistic or universalistic approaches, but centered instead on the cultural and social variability of cognitive processes and the multiplicity of forces and environments that encourage, stimulate, and inhibit certain cognitive mechanisms, the author rejects the idea of a degradation or crisis of attention and proposes an alternative vision of the problem of attention in contemporary societies. Placing cultural conventions, social norms, and ecological environments at the forefront of our understanding of individual and collective attention, Attention and its Crisis in Digital Society will appeal to scholars of sociology, psychology, and philosophy with interests in social theory, cognitive processes, and the criticisms often levelled at digital society and new technologies.

High Performance Two-Stroke Engines analyses the technology of spark ignition two-stroke engines. The presentation is simple and comprehensive. The description of the operating cycle, the fluid dynamics, the lubrication and the cooling systems is followed by painstaking analysis of the mechanical organs, with the materials and the manufacturing processes employed to produce

them. The book is completed by an overview of the history and evolution of these engines and by an examination of the principal types and the diverse fields in which they are employed. A section of the work is dedicated to an in-depth analysis of the ignition and combustion phases and the formation of the air-fuel mixture, with particular attention paid to the most recent injection systems.

La ricerca ha dimostrato che l'apprendimento di una seconda lingua migliora il problem solving, il pensiero critico e le capacità di ascolto, e migliora anche la memoria, la concentrazione e le capacità di multitasking. Anche i bambini che parlano altre lingue mostrano segni di maggiore creatività e flessibilità mentale. Esiste una "fase critica" o "finestra di opportunità" in cui i bambini imparano meglio le lingue. Gli studi hanno dimostrato che questo è il caso quando i bambini sono tra la nascita e i sei anni. Più i bambini sono piccoli, più è facile per loro imparare una seconda lingua. Quando si invecchia, questa abilità diminuisce. Queste semplici e divertenti carte di apprendimento sono progettate per aiutare i genitori ad imparare una nuova lingua come utile strumento di apprendimento per i bambini.

It is well-known that the topic of composite materials affects many engineering fields, such as civil, mechanical, aerospace, automotive and chemical. In the last decades, in fact, a huge number of scientific papers concerning these peculiar constituents has been published. Analogously, the industrial progress has been extremely noticeable. The study of composite materials, in general, is a challenging activity since the advancements both in the academia and in the industry provide continually new sparks to develop innovative ideas and applications. The communication, the sharing and the exchange of views can surely help the works of many researchers. This aspect represents the main purpose of this Conference, which aims to collect high-level contributions on the development and the application of composite materials. The establishment of this 21st edition of International Conference on Composite Structures has appeared appropriate to continue what has been begun during the previous editions. ICCS wants to be an occasion for many researchers from each part of the globe to meet and discuss about the recent advancements regarding the use of composite structures, sandwich panels, nanotechnology, bio-composites, delamination and fracture, experimental methods, manufacturing and other countless topics that have filled many sessions during this conference. As a proof of this event, which has taken place in Bologna (Italy), selected plenary and key-note lectures have been collected in the present book.

The science behind a good meal: all the sounds, sights, and tastes that make us like what we're eating—and want to eat more. Why do we consume 35 percent more food when eating with one other person, and 75 percent more when dining with three? How do we explain the fact that people who like strong coffee drink more of it under bright lighting? And why does green ketchup just not work? The answer is gastrophysics, the new area of sensory science pioneered by Oxford professor Charles Spence. Now he's stepping out of his lab to lift the lid on the entire eating experience—how the taste, the aroma, and our overall enjoyment of food are influenced by all of our senses, as well as by our mood and expectations. The pleasures of food lie mostly in the mind, not in the mouth. Get that straight and you can start to understand what really makes food enjoyable, stimulating, and, most important, memorable. Spence reveals in amusing detail the importance of all the “off the plate” elements of a meal: the weight of cutlery, the color of the plate, the background music, and much more. Whether we're dining alone or at a dinner party, on a plane or in front of the TV, he reveals how to understand what we're tasting and influence what others experience. This is accessible science at its best, fascinating to anyone in possession of an appetite. Crammed with discoveries about our everyday sensory lives, Gastrophysics is a book guaranteed to make you look at your plate in a whole new way.

This book is the first to establish the relevance of same-sex desires, pleasures and anxieties in the cinema of post-war Italy. It explores cinematic representations of homosexuality and their significance in a wider cultural struggle in Italy involving society, cinema, and sexuality between the 1940s and 1970s. Besides tracing the evolution of representations through both art and popular films, this book also analyses connections with consumer culture, film criticism and politics. Giori uncovers how complicated negotiations between challenges to and valorization of dominant forms of knowledge of homosexuality shaped representations and argues that they were not always the outcome of hatred but also sought to convey unmentionable pleasures and

complicities. Through archival research and a survey of more than 600 films, the author enriches our understanding of thirty years of Italian film and cultural history.
