'Athletic CEOs: Leadership in Turbulent Times' is about CEOs who do not lead by the book: people who score low on emotional intelligence, do not praise their subordinates and rarely provide constructive feedback or celebrate small wins. Yet it is also a book about high-performing transformational leaders: Alexander Dyukov (Gazprom Neft), German Gref (Sberbank), Eugene Kaspersky (Kaspersky Lab), and Vitaly Saveliy (Aeroflot). Each of these leaders have created formidable enterprises that deliver sustainable growth in profits and shareholder value; set new standards for the industry; leave a positive impact on their

employees and on the country and the regions they operate in; and – most remarkably – continue to reinvent themselves. Having studied the work of these leaders for a decade, Stanislav Shekshnia, Alexey Ulanovsky and Veronika Zagieva's model of Athletic Leadership summarizes the unique characteristics of these leaders and their leadership.

Over the past century, the Italian landscape has undergone exceedingly rapid transformations, shifting from a mostly rural environment to a decidedly modern world. This changing landscape is endowed with a narrative agency that transforms how we understand our surroundings. Situated at the juncture of Italian studies and ecocriticism and following the recent "material turn" in the environmental humanities, *Elemental Narratives* outlines an original cultural and environmental map of the bel paese. Giving equal weight to readings of fiction, nonfiction, works of visual art, and physical sites, Enrico Cesaretti investigates the interconnected stories emerging from both human creativity and the expressive eloquence of "glocal" materials, such as sulfur, petroleum, marble, steel, and asbestos, that have helped make and, simultaneously, "un-make" today's Italy, affecting its socio-environmental health in multiple ways. Embracing the idea of a decentralized agency that is shared among human and nonhuman entities, Cesaretti suggests that engaging with these entangled discursive and material texts is a sound and revealing ecocritical practice that promises to generate new knowledge and more participatory, affective

responses to environmental issues, both in Italy and elsewhere. Ultimately, he argues that complementing quantitative, data-based information with insights from fiction and nonfiction, the arts, and other humanistic disciplines is both desirable and crucial if we want to modify perceptions and attitudes, increase our awareness and understanding, and, in turn, develop more sustainable worldviews in the era of the Anthropocene. Elegantly written and convincingly argued, this book will appeal broadly to scholars and students working in the fields of environmental studies, comparative literatures, ecocriticism, environmental history, and Italian studies.

The SAN DIEGAN - 41st Edition Beard Books

After a quarter century of almost general condemnation and rebuttal of the entire nationalization experience, it appears that there are second thoughts about governmental direct intervention in the economy. Reappraising State-Owned Enterprise deals with a topic often undervalued in the past decade but which now, with the crisis of 2008-2009, calls for greater attention: the direct intervention of the State as Entrepreneur. The collection of essays in this volume - prepared by some of the leading authorities in the field - offers a contribution to this debate by providing a balanced assessment of two of the most relevant experiences of mixed economies, the United Kingdom and Italy. In this respect, a comparison between these two countries is very much appropriate since in both nations the State played an important role as "Entrepreneur" starting in the early 20th century. In Great Britain and Italy, the heyday of the "State as Entrepreneur" was in the years right after WWII when it was used as a tool for promoting a modern society

in which citizens acquired a stronger sense of belonging to their nations. The UK and Italy saw the State take on a too-pervasive role in the 70s; the two nations responded in different ways. In the 1980s Great Britain embarked on a harsh process of privatizations while Italians struggled on until finally submitting to privatizations in their nation in the following decade. The deep crisis of the final years of the 21st century forced both nations to reconsider State interventions as an appropriate tool in order to protect the wellbeing of the national economy.

The Electrical Review The SAN DIEGAN

This may be the most important book you or anyone else will read in the next fifty years. Assuming humanity survives that long. Draining the lifeblood of industrial civilization, the terminal decline of oil and gas production will spark a crisis far more dangerous than international terrorism, and more urgent than climate change. World leaders know it, so why aren't they telling? The last oil shock is the secret behind the crises in Iraq and Iran, the reason your gas bill is going through the roof, the basis of a secret deal cooked up in Texas between George Bush and Tony Blair, the cause of an imminent and unprecedented economic collapse, and the reason you may soon be kissing your car keys and boarding pass goodbye. David Strahan explains how we reached this critical state, how the silence of governments, oil companies and environmentalists conspires to keep the public in the dark, what it means for energy policy, and what you can do to protect yourself and your family from the ravages of the last oil shock.

Dynamic Risk Analysis in the Chemical and Petroleum Industry

focuses on bridging the gap between research and industry by responding to the following questions: What are the most relevant developments of risk analysis? How can these studies help industry in the prevention of major accidents? Paltrinieri and Khan provide support for professionals who plan to improve risk analysis by introducing innovative techniques and exploiting the potential of data share and process technologies. This concrete reference within an ever-growing variety of innovations will be most helpful to process safety managers, HSE managers, safety engineers and safety engineering students. This book is divided into four parts. The Introduction provides an overview of the state-of-the-art risk analysis methods and the most up-to-date popular definitions of accident scenarios. The second section on Dynamic Risk Analysis shows the dynamic evolution of risk analysis and covers Hazard Identification, Frequency Analysis, Consequence Analysis and Establishing the Risk Picture. The third section on Interaction with Parallel Disciplines illustrates the interaction between risk analysis and other disciplines from parallel fields, such as the nuclear, the economic and the financial sectors. The final section on Dynamic Risk Management addresses risk management, which may dynamically learn from itself and improve in a spiral process leading to a resilient system. Helps dynamic analysis and management of risk in chemical and process industry Provides industry examples and techniques to assist you with risk- based decision making Addresses also the human, economic and reputational aspects composing the overall risk picture
