know in order to pass the CompTIA Network+ N10-006 exam. Network+ is a globally recognized, vendor-neutral certification which validates the knowledge and ability of technicians to set up, troubleshoot, and maintain networks. It is also a suitable preparation for more advanced networking certification. The target student for this course should have a basic background in using and maintaining individual workstations. A CompTIA A+ certification is recommended but not required. Students will learn how to use fundamental network terminology, conceptual models, and troubleshooting methodologies; they will learn about physical network technologies such as Ethernet and Wi-Fi; then they will study the core protocols and troubleshooting tools of TCP/IP. Next they will learn how larger LANs are connected and managed via switches and routers, and how these networks are joined into larger WANs and the internet. Then they will learn to secure networks by recognizing common threats, using effective security tools and protocols, and employing a defense in depth strategy. They will then learn how to monitor and optimize traffic on diverse high-performance networks, including convergence between multiple network types and the growingly popular virtualization and cloud technologies. Finally, they will learn to plan, install, and maintain an office network using a consistent methodology.
