 Cities are always changing: streets, infrastructure, public spaces, and buildings are constantly being built, improved, demolished, and replaced. But even when a new project is designed to improve a community, neighborhood residents often find themselves at odds with the real estate developer who proposes it. Savvy developers are willing to work with residents to allay their concerns and gain public support, but at the same time, a real estate development is a business venture financed by private investors who take significant risks. In *How Real Estate Developers Think*, Peter Hendee Brown explains the interests, motives, and actions of real estate developers, using case studies to show how the basic principles of development remain the same everywhere even as practices vary based on climate, local culture, and geography. An understanding of what developers do and why they do it will help community members, elected officials, and others participate more productively in the development process in their own communities. Based on interviews with over a hundred people involved in the real estate development business in Chicago, Miami, Portland (Oregon), and the Twin Cities of Minneapolis and St. Paul, *How Real Estate Developers Think* considers developers from three different perspectives. Brown profiles the careers of individual developers to illustrate the character of the entrepreneur, considers the roles played by innovation, design, marketing, and sales in the production of real estate, and examines the risks and rewards that motivate developers as people. Ultimately, *How Real Estate Developers Think* portrays developers as creative visionaries who are able to imagine future possibilities for our cities and communities and shows that understanding them will lead to better outcomes for neighbors, communities, and cities.

This book is a comprehensive analysis of property investment and the market's determination of commercial property values and investment performance. The author examines the economic forces that operate in the property market by placing property in the context of the overall investment market and the local, national and international economies. Relevant concepts and principles of economics, investment and finance are identified; these are then used to explain the operation of the property market and property price determination. The text begins with a study of the stock market, identifying the principles and forces which explain the price determination of stocks and shares. These principles are then applied to commercial property investments and a simple theory is developed. The three major sectors of the property market (letting, development and investment) are then analysed in depth, and the pricing theory is reviewed. After an examination of the influence of government intervention, the subject is synthesised by detailed studies of three of the most turbulent periods in the history of the post Second World War property market in the UK. In this second edition, both the text and illustrative examples have been updated. The theory of the market's determination of rental values and yields have been substantially revised and developed. A new chapter, discussing the 1980s property boom and the 1990s collapse, has been added.

This book presents a new way of thinking about, teaching, learning, and practicing real estate development. Real Estate Development Matrix describes the process in a two-dimensional model and presents seven Development Stages which form the horizontal axis, and eight sets of Development Tasks which form the vertical axis to define a 56-cell matrix. In each cell, money is spent and risks are taken to achieve certain tasks and thereby create (or destroy) value. This holistic process considers the entire life cycle of real estate from its "green field" inception to its "brown field" state. The book is written by a real estate developer and academic, and the presented material is conceptual, practical, and non-technical. Jargon has been minimized as much as possible as the author introduces an entirely new model for real estate development that is both academically authoritative and developed in practice. It is aimed at a general professional audience participating in the development process, but equally the book is ideal for use as a textbook in undergraduate and graduate courses in real estate development, and an excellent supplemental text for business courses discussing real estate finance and investment. It may also be used as a textbook for professional courses, workshops, or seminars in real estate development. The book is supported by an interactive website at <http://realestatedevelopmentmatrix.com/>
