Anatomy and Physiology Chapter 12

Part 1:

Nervous

System/Neural Tissue:

Anatomy and Physiology

Help

The nervous system can be separated into divisions on the basis of anatomy and physiology.

The anatomical divisions are the central and peripheral nervous systems. The CNS is the

brain and spinal cord.

**13.2 The Central Nervous System - Anatomy and Physiology**

The thalamus is a relay between the cerebrum and the rest of the nervous system. The hypothalamus coordinates homeostatic functions through the autonomic and endocrine systems. The brain stem is composed of the midbrain, pons, and medulla.
