Therefore, covalent compounds are softer, and more flexible. Covalent compounds are also more

flammable than ionic compounds, due to the fact that they often contain Carbon and Hydrogen. CHEMISTRY BONDING REVIEW A covalent bond forms when electrons are shared between two atoms. Compounds that are made of molecules, such as water and sugar, have covalent bonds. Compounds that exist as networks of bonded atoms, such as silicon dioxide, are also held together by covalent bonds. In general, covalent bonds form between atoms of nonmetals. CHAPTER SECTION 2 Ionic and Covalent Bonding Bonds of C or H to atoms such as N and O are polar. These bonds are important in functional groups. If a bond is covalent you should be able to identify whether it is polar or non-polar. Now try some questions. If you are having difficulty then you need

to review bond polarity. ©Ch 1 : Chemical Bonding Chapter 14 Covalent Bonds Review Sheet Answers This is likewise one of the factors by obtaining the soft documents of this chapter 14 covalent bonds review sheet answers by online. You might not require more time to spend to go to the books start as competently as search for them. In some cases, you likewise get not discover the notice chapter 14 covalent bonds review sheet answers that you are looking for. Chapter 14 Covalent Bonds Review Sheet Answers covalent bond a bond formed when atoms share one or more pairs of electrons metallic bond a bond formed by the attraction between positively charged metal ions and the electrons around them molecule a group of atoms that are held together by

chemical forces; a molecule is the smallest unit of matter that can exist by itself and retain all of a substance's chemical properties

SECTION 3 Covalent and Metallic Bonds

Chapter 12 Review 1: Covalent Bonds and Molecular Structure

1) How are ionic bonds and covalent bonds different, and what types of elements combine to form each? Ionic bonds result from the transfer of electrons from one atom to another (formed by a metal and a non-metal)
