Land, Law and Chiefs in Rural South Africa Oxford University Press

Principles of Property Law offers a critical and contextual analysis of fundamental property law, providing students with the tools to enable them to make sense of English land law rules in the context of real-world applications. This new book adopts a contextual approach, placing the core elements of a qualifying law degree property and land law course in the context of general principles and practices as they have developed in the UK, and other jurisdictions in response to a changing societal relationship with a variety of factors. Also drawing on concepts of property developed by political theorists, economists and environmentalists, Principles of Property Law gives students a clear understanding of how property law works, why it matters, and how the theory connects with the real world. Suitable for undergraduates studying property and land law in England, Wales and Northern Ireland, as well as postgraduate students seeking an accessible analysis.

'Here is a book whose breadth of purpose and depth of learning are breathtaking.' Peter Butt, [2005] 69 Conv 363 Gray & Gray's Elements of Land Law is the definitive textbook on the subject. The book offers comprehensive coverage of the law in

this area. The authors provide an insightful and thought-provoking commentary on the modern development of the subject and go on to explore how land law functions in today's society. The book includes an analysis of recent legislation and case law in England and Wales. There are also references to significant cases from Australia, New Zealand, the United States and Canada, coupled with a detailed account of reforms currently proposed by the English Law Commission. The book demonstrates a thorough understanding of the social and political context of land law and guides the reader through the sometimes difficult terminology of the subject. This fifth edition continues to balance up-to-date coverage of the key issues in land law with a critical survey of cutting-edge research. Building on the strengths of previous editions, the book ensures that excellent scholarship is accessible to an even wider readership: more chapters of shorter length offer the possibility of readers 'dipping' into topics in a non-linear way. A fresh, new format and text design support the re-structuring of content and aid navigability. Readers wanting to explore areas of interest in more depth are encouraged to do so by the exemplary footnoting and referencing. The book is accompanied by an online resource centre providing updates and web links between editions. This facility also contains illustrative material such as photographs relating to relevant cases discussed in the book. A podcast of the authors introducing the subject will excite students new to the subject area.

Land Use Law in Florida presents an in-depth analysis of land use law common

to many states across the United States, using Florida cases and statutes as examples. Florida case law is an important course of study for planners, as the state has its own legal framework that governs how people may use land, with regulation that has evolved to include state-directed urban and regional planning. The book addresses issues in a case format, including planning, land development regulation, property rights, real estate development and land use, transportation, and environmental regulation. Each chapter summarizes the rules that a reader should draw from the cases, making it useful as a reference for practicing professionals and as a teaching tool for planning students who do not have experience in reading law. This text is invaluable for attorneys; professional planners; environmental, property rights, and neighborhood activists; and local government employees who need to understand the rules that govern how property owners may use land in Florida and around the country.

McFarlane, Hopkins, and Nield's Land Law is the most succinct, analytical textbook available in this subject area. These experienced and respected authors have used their unique approach to land law to provide a consistent structure with which students and lecturers can tackle the topics. The approach arms students with the tools needed to analyse content covered in classes and exams autonomously by demonstrating how to consider rules in isolation before looking at the full picture. This method helps students make links across topics. The concise treatment allows students to concentrate on building an in-depth,

sophisticated grasp of the core principles. The authors' direct writing style and contextual outlook guides readers through the depth and detail and gives lucidity to abstract rules. The use of significant cases to exemplify rules in practice and diagrams for visual learners gives additional clarity to concepts that are particularly difficult to imagine. Students are encouraged to test their knowledge by answering end-of-chapter questions and to widen their research by referring to the resources suggested in the further reading lists accompanying each chapter. Online resources Students can access additional supportive materials online including:- Web links to useful sites containing further information on chapter-specific topics- Self-test questions with instant feedback- Essay questions and guidance on how to answer them- Updates on legal developments in land law

"Byrne ... considered that it might be easier to learn geometry if colors were substituted for the letters usually used to designate the angles and lines of geometric figures. Instead of referring to, say, 'angle ABC,' Byrne's text substituted a blue or yellow or red section equivalent to similarly colored sections in the theorem's main diagram."--Friedman.

In this pioneering work Siraj Sait and Hilary Lim address Islamic property and land rights, drawing on a range of socio-historical, classical and contemporary resources. They address the significance of Islamic theories of property and Islamic land tenure regimes on the 'webs of tenure' prevalent in the Muslim societies. They consider the possibility of using Islamic legal and human rights systems for the development of inclusive, pro-poor approaches to land rights. They also focus on Muslim women's rights to property and inheritance systems. Engaging with institutions such as the Islamic endowment (waqf) and principles of Islamic microfinance, they test the workability of 'authentic' Islamic proposals. Located in human rights as well as Islamic debates, this study offers

a well researched and constructive appraisal of property and land rights in the Muslim world.

"A masterly book" —Nassim Nicholas Taleb, author of *The Black Swan* "A classic" —Simon Kuper, *Financial Times*

An economist explains five laws that confirm our worst fears: stupid people can and do rule the world Throughout history, a powerful force has hindered the growth of human welfare and happiness. It is more powerful than the Mafia or the military. It has global catastrophic effects and can be found anywhere from the world's most powerful boardrooms to your local bar. It is human stupidity. Carlo M. Cipolla, noted professor of economic history at the UC Berkeley, created this vitally important book in order to detect and neutralize its threat. Both hilarious and dead serious, it will leave you better equipped to confront political realities, unreasonable colleagues, or your next dinner with your in-laws. The Laws: 1. Everyone underestimates the number of stupid individuals among us. 2. The probability that a certain person is stupid is independent of any other characteristic of that person. 3. A stupid person is a person who causes losses to another person while deriving no gain and even possibly incurring losses themselves. 4. Non-stupid people always underestimate the damaging power of stupid individuals. 5. A stupid person is the most dangerous type of person.

"Land Law Reform examines the widespread efforts to reform land law in developing countries and countries in transition, drawing in particular upon the

experience of the World Bank and the Rural Development Institute. The book considers the role of land law reform in the development process and analyzes how the World Bank has sought to support these legal changes in client countries. It reviews the experience with reform of laws affecting land access and rights in achieving gender equity, identifies opportunities for reinforcing environmentally sustainable development through land law reform, and examines from both growth and poverty alleviation perspectives the effectiveness of reforms to formalize property rights and liberalize land markets. The concluding chapter recommends some basic priorities for land law reforms. John W. Bruce is a senior counsel in the Legal Vice-Presidency of the World Bank, and a former director of the Land Tenure Center of the University of Wisconsin-Madison. He has published extensively on land law and land policy in developing countries. Renee Giovarelli, David Bledsoe, Leonard Rolfes, and Robert Mitchell are staff attorneys with the Rural Development Institute of Seattle, Washington, a nonprofit organization that promotes and advises on land-related policy and legal reform in developing and transition countries. All have done fieldwork and advised extensively on land law reform and have published widely on this topic."
