First book in the new Paediatric Psychology series. Feeding problems in children are relatively common, and often resolve themselves with little need for intervention. However, some categories of feeding problem are severe, persistent, and may be life-threatening without skilled involvement by professionals, including medical and surgical intervention. This revised and expanded Second Edition of Feeding Problems in Children deals with these severe and persistent problems, summarising the different kinds of work undertaken with children and their families

in a number of countries. It first discusses the theoretical frameworks and perspectives, before moving on to explore clinical and applied research aspects of children's feeding. Finally, a comprehensive Clinical Practice Toolkit has been added to this edition, providing clinical models, checklists, model forms and reports. Featuring contributions from well-known international experts in the field, comprehensive and fully referenced, this book continues to be essential reading for all those practising or training in paediatrics in primary or secondary care, including paediatricians, GPs, gastroenterologists, psychologists, psychiatrists, therapists, paediatric nurses, health visitors and allied health professionals.

A Guide to Australian Geckos & Pygopods Lippincott Williams & Wilkins

Two key challenges face mental health practitioners: making the correct psychiatric diagnosis and choosing the most appropriate treatment option. This book aims to help with both. Clinical Guide to the Diagnosis and Treatment of Mental Disorders - Second Edition combines clinically-relevant information about each of the DSM-IV-TR diagnoses with clear, detailed information on treatment options, giving full clinical management advice. Once again, the editors, both leading psychiatrists, have condensed the chapters on Disorders from Tasman et al's acclaimed two volume textbook of Psychiatry (now in its Third Edition), retaining only the content they deem particularly relevant to the clinician for ease of use. Each disorder is discussed under the headings of Diagnosis (including Assessment Issues, Comorbidity, Course, and Differential Diagnosis, giving diagnostic decision trees where relevant) and Treatment (listing all therapeutic options, giving

practical advice for patient management, summarising treatment specifics with tables and treatment flowcharts). The original edition established itself as the first point of reference for any clinician or mental health practitioner needing expert advice on therapeutic options for any psychiatric disorder. This edition features an additional chapter on the psychiatric interview and assessment of mental status to increase its utility. It echoes the progress in psychiatry regarding the establishment of an evidenced-based model of taxonomy, diagnosis, etiology, and treatment. Indeed, from a psychologist's perspective, the equal consideration provided to empirically supported psychosocial treatments versus somatic treatment is a significant development in the field of psychiatry. Feeding Problems in Children Elsevier Health Sciences
Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up-to-date clinical information. An extensive knowledge of basic pathophysiology, as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago, new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines, a comprehensive multidisciplinary approach presenting the information is essential, similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order

to understand the pathogenesis and optimum care of a variety of critical illnesses, we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome, an expanded

discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies, acute coronary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU, and nursing care of the ICU patient.
