Sacred Worlds Peabody Museum of Archaeology & Exploring Ancient Skies brings together the methods of archaeology and the insights of modern astronomy to explore the science of astronomy as it was practiced in various cultures prior to the invention of the telescope. The book reviews an enormous and growing body of literature on the cultures of the ancient Mediterranean, the Far East, and the New World (particularly Mesoamerica), putting the ancient astronomical materials into their archaeological and cultural contexts. The authors begin with an overview of the field and proceed to essential aspects of

naked-eye astronomy, followed by an examination of specific cultures. The book concludes by taking into account the purposes of ancient astronomy: astrology, navigation, calendar regulation, and (not least) the understanding of our place and role in the universe. Skies are recreated to display critical events as they would have appeared to ancient observers - events such as the supernova of 1054, the 'lion horoscope' or the 'Star of Bethlehem.' Exploring Ancient Skies provides a comprehensive overview of the relationships between astronomy and other areas of human investigation. It will be useful as a reference for scholars and students in both astronomy and archaeology, and will be of compelling interest to readers who seek a broad understanding of our collective intellectual history.

Maya sacbeob, or raised "white roads," are often considered a single class of features, with a sole purpose. In this first systematic examination of their functions, meanings, arrangements, and construction styles, Justine Shaw reveals that these causeways served a variety of cultural and natural functions. In *White Roads of the Yucatán*, author Justine Shaw presents original field data collected with the Coahuah Regional Archaeological Survey at two ancient Maya sites, Ichmul and Yo'okop. Both centers chose to invest enormous resources in the construction of monumental roadways during a time of social and political turmoil in the Terminal Classic period. Shaw carefully examines why it was at this point—and no other—that the settlements made such a decision. She argues that both settlements used the sacbeob as a method of socially integrating the largest, most diverse and dispersed population in the Coahuah region. She further demonstrates that their use of the sacbeob, in concert with other innovative strategies, allowed Ichmul and Yo'okop to outlast many of the sites that they may have sought to emulate and to flourish during a time of tremendous sociopolitical and economic change. In addition to her detailed discussion of these two sites, Shaw provides an exhaustive review of the literature of Maya sacbeob archaeology, describing various interpretations of construction, features, and variability. This synthetic and interpretive treatment will aid researchers working on a variety of complex civilizations with road systems, as well as those interested in core-periphery relationships, cultural collapse, and social integration.

This monograph is a review of the present state of knowledge of the relationships and consequences of over 25 centuries of interactions between the Amerindian and Asean Circum-Pacific regions. A fascinating, special case of previous work by two Asianists on similar themes of the Euro-Asian Continental land mass, providing the theoretical framework within which the complexities of cultural cross-pattern are studied. The subjects discussed individually begin with the elements of recording and writing, continuing through the arts, religion, folklore and an eventual examination of the natural sciences and technology. There is also a discussion in this context of evidence from and the relevance of ethno-botany, ethno-zoology and ethno-helminthology. The underlying thesis of this volume is the relative independence and powerfully original development and evolution of Amerindian cultures and societies in Central and South America.

This book analyzes the lives and the continuing ritual traditions of the Mayas who live in the United States. Focusing on a predominantly Maya town in rural Florida, it shows how members of this ancient Central American civilization use their religious tradition to maintain their ethnic identity in an unfamiliar environment. Bringing together studies of Mesoamerican fiesta or cargo systems, religious ritual and migration studies, this interdisciplinary work describes the religious traditions of indigenous Guatemala, the crisis migration of the 1980s, and the Mayas' daily life in the United States, including Maya women's

reflections on their new challenges. The book is unique in its focus on the transfer of the fiesta cycle to the diaspora and its analysis of the behind-the-scenes aspects of ritual. The rise of leadership, contested interpretations of ethnic identity, choices about symbolic representation, and maintenance of ties to villages of origin all take place in the context of organizing public ritual events. Through these strategies, the Maya people not only cope materially and spiritually with the chaotic experience of uprootedness, but find ways to strengthen their unique identity. Bibliography. In *Maya Political Science: Time, Astronomy, and the Cosmos*, Prudence M. Rice proposed a new model of Maya political organization in which geopolitical seats of power rotated according to a 256-year calendar cycle known as the May. This fundamental connection between timekeeping and Maya political organization sparked Rice's interest in the origins of the two major calendars used by the ancient lowland Maya, one 260 days long, and the other having 365 days. In *Maya Calendar Origins*, she presents a provocative new thesis about the origins and development of the calendrical system. Integrating data from anthropology, archaeology, art history, astronomy, ethnohistory, myth, and linguistics, Rice argues that the Maya calendars developed about a millennium earlier than commonly thought, around 1200 BC, as an outgrowth of observations of the natural phenomena that scheduled the movements of late Archaic hunter-gatherer-collectors throughout what became Mesoamerica. She asserts that an understanding of the cycles of

weather and celestial movements became the basis of power for early rulers, who could thereby claim "control" over supernatural cosmic forces. Rice shows how time became materialized—transformed into status objects such as monuments that encoded calendrical or temporal concerns—as well as politicized, becoming the foundation for societal order, political legitimization, and wealth. Rice's research also sheds new light on the origins of the *Popol Vuh*, which, Rice believes, encodes the history of the development of the Mesoamerican calendars. She also explores the connections between the Maya and early Olmec and Izapan cultures in the Isthmian region, who shared with the Maya the cosmivision and ideology incorporated into the calendrical systems.

The Second Edition of *Religions of Mesoamerica* comes at a turning point in the study of the Americas and the religious and cultural histories of the New World. To that end, esteemed scholar David Carrasco integrates past and current research, developments, and excavations to vividly synthesize the history of Mesoamerican cultures—their religious forms, ceremonial centers, complex social structures, view of time and space, myths, and rituals. Carrasco's deep yet concise overview takes readers on an absorbing journey where they experience the dynamics and complexities of Aztec and Maya cultures, the Spanish conquest, and cultural combinations of European and indigenous ideas and practices. He skillfully demonstrates how the religious imagination was and continues to be crucial to the survival and creativity of Mesoamerica and its Chicano/a descendants.

Completely revised and updated, this new edition provides a readable, beautifully illustrated journey through world cultures and the vibrant array of sky mythology, creation stories, models of the universe, temples and skyscrapers that each culture has created to celebrate and respond to the power of the night sky. Sections on the archaeoastronomy of South Asia and South East Asia have been expanded, with original photography and new research on temple alignments in Southern India, and new material describing the astronomical practices of Indonesia, Malaysia and other Southeast Asian countries. Beautiful photographs of temples in India and Asia have been added, as well as new diagrams explaining the alignment of these structures and the astronomical underpinnings of temples within the Pallava and Chola cultures. From new fieldwork in the Four Corners region of North America, Dr. Penprase has included accounts of Pueblo skywatching and photographs of ceremonial kivas that help elucidate the rich astronomical knowledge of the Pueblo people. The popular "Archaeoastronomy of Skyscrapers" section of the book has been updated as well, with new interpretations of skyscrapers in Indonesia, Taiwan and China. With the rapid pace of discovery in astronomy and astrophysics, entirely new perspectives are emerging about dark matter, inflation and the future of the universe. The Power of Stars puts these discoveries in context and describes how they fit into the modern perspective of cosmology, which has arisen from the universal human response to the sky that has inspired both ancient and modern cultures.

Skywatchers of Ancient Mexico helped establish the field of archaeoastronomy, and it remains the standard introduction to this subject. Combining basic astronomy with archaeological and ethnological data, it presented a readable and entertaining synthesis of all that was known of ancient astronomy in the western hemisphere as of 1980. In this revised edition, Anthony Aveni draws on his own and others' discoveries of the past twenty years to bring the Skywatchers story up to the present. He offers new data and interpretations in many areas, including: The study of Mesoamerican time and calendrical systems and their unprecedented continuity in contemporary Mesoamerican culture The connections between Precolumbian religion, astrology, and scientific, quantitative astronomy The relationship between Highland Mexico and the world of the Maya and the state of Pan-American scientific practices The use of personal computer software for computing astronomical data With this updated information, Skywatchers will serve a new generation of general and scholarly readers and will be useful in courses on archaeoastronomy, astronomy, history of astronomy, history of science, anthropology, archaeology, and world religions.

A Scholarly Guide and Bibliography Dynamite Entertainment Cosmology, Calendars, and Horizon-Based Astronomy in Ancient Mesoamerica is an interdisciplinary tour de force that establishes the critical role astronomy played in the religious and civic lives of the ancient peoples of Mesoamerica. Providing extraordinary examples of how Precolumbian peoples merged ideas about the cosmos with those concerning calendar and astronomy, the volume showcases the value of detailed examinations of

astronomical data for understanding ancient cultures. The volume is divided into three sections: investigations into Mesoamerican horizon-based astronomy, the cosmological principles expressed in Mesoamerican religious imagery and rituals related to astronomy, and the aspects of Mesoamerican calendars related to archaeoastronomy. It also provides cutting-edge research on diverse topics such as records of calendar and horizon-based astronomical observation (like the Dresden and Borgia codices), iconography of burial assemblages, architectural alignment studies, urban planning, and counting or measuring devices. Contributors—who are among the most respected in their fields—explore new dimensions in Mesoamerican timekeeping and skywatching in the Olmec, Maya, Teotihuacano, Zapotec, and Aztec cultures. It will be of great interest to students and scholars of anthropology, archaeology, art history, and astronomy.

Connecting the massive landscapes of North and South America are Mexico and Central America. An area of fascination and study for geographers and scholars from around the world, for millennia these lands and people have played important roles in the discoveries and distributions of civilizations, resources, and nations. These regions have stimulated a large amount of research and publications across the sub-disciplines of geography. The *Geography of Central America and Mexico: A Scholarly Guide and Bibliography* by Thomas A. Rumney collects, organizes, and presents as many of these publications as possible to encourage efforts in the teaching, study, and continuing scholarship of the geography of this area, which includes Mexico, Belize, Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica, and Panama. Beginning with the region as a whole, each chapter that follows one per nation is divided by the specific sub-disciplines of geography: cultural, social, economic, historical, physical and environmental, political, and urban. Each section is further divided by document type: atlases, books, book chapters, articles from scholarly journals, master's theses, and doctoral dissertations. Although the majority of entries recorded focus on English-language works, selected entries written in Spanish, as well as French, German, and other languages, are included (with entries titles translated into English and noted accordingly)."

As archaeologists peel away the jungle covering that has both obscured and preserved the ancient Maya cities of Mexico and Central America, other scholars have only a limited time to study and understand the sites before the jungle, weather, and human encroachment efface them again, perhaps forever. This urgency underlies Yaxchilan: The Design of a Maya Ceremonial City, Carolyn Tate's comprehensive catalog and analysis of all the city's extant buildings and sculptures. During a year of field work, Tate fully documented the appearance of the site as of 1987. For each sculpture and building, she records its discovery, present location, condition, measurements, and astronomical orientation and reconstructs its Long Counts and Julian dates from Calendar Rounds. Line drawings and photographs provide a visual document of the art and architecture of Yaxchilan. More than mere documentation, however, the book explores the phenomenon of art within Maya society. Tate establishes a general framework of cultural practices, spiritual beliefs, and knowledge likely to have been shared by eighth-century Maya

people. The process of making public art is considered in relation to other modes of aesthetic expression, such as oral tradition and ritual. This kind of analysis is new in Maya studies and offers fresh insight into the function of these magnificent cities and the powerful role public art and architecture play in establishing cultural norms, in education in a semiliterate society, and in developing the personal and community identities of individuals. Several chapters cover the specifics of art and iconography at Yaxchilan as a basis for examining the creation of the city in the Late Classic period. Individual sculptures are attributed to the hands of single artists and workshops, thus aiding in dating several of the monuments. The significance of headdresses, backracks, and other costume elements seen on monuments is tied to specific rituals and fashions, and influence from other sites is traced. These analyses lead to a history of the design of the city under the reigns of Shield Jaguar (A.D. 681-741) and Bird Jaguar IV (A.D. 752-772). In Tate's view, Yaxchilan and other Maya cities were designed as both a theater for ritual activities and a nexus of public art and social structures that were crucial in defining the self within Maya society.

More than one hundred fifty years ago, Moravian missionaries first landed along a so-called isolated stretch of Honduras's Mosquito Coast bordering the western Caribbean Sea. The missionaries were sent, with the strong encouragement of German political leaders and in the context of German attempts at colonization, to spread the word of Protestantism in Central America. Upon their arrival, the missionaries employed a three-pronged approach consisting of proselytizing, medical treatment,

and education to convert the majority of the indigenous population. Much like the Spanish and English attempts before them, German colonizing efforts in the region never completely took hold. Still, as Benjamin Tillman shows, for the region's indigenous inhabitants, the Miskito people, the arrival of the Moravian missionaries marked the beginning of an important cultural interface. Imprints on Native Lands documents Moravian contributions to the Miskito settlement landscape in sixty four villages of eastern Honduras through field observations of material culture, interviews with village residents, and research in primary sources in the Moravian Church archives. Tillman employs the resulting data to map a hierarchy of Moravian centers, illustrating spatially varying degrees of Moravian influence on the Miskito settlement landscape. Tillman reinforces Miskito claims to ancestral lands by identifying and mapping their created ethnic landscape, as well as supporting earlier efforts at land-use mapping in the region. This book has broad implications, providing a methodology that will be of help to those with an interest in geography, anthropology, or Latin American studies, and to anyone interested in documenting and strengthening indigenous land claims.

 Archaeomagnetic dating—dating archaeological and geological materials by comparing their magnetic data with known changes in the earth's magnetic field—has proved to be of increasing reliability in establishing behavioral and social referents of archaeological data. Now this volume presents the first book-length treatment of its theory and methodology in North American archaeology. The sixteen original papers in many cases represent the work of individuals who have been intimately involved with the development and refinement of archaeomagnetic dating techniques. They discuss the geophysical underpinnings of archaeomagnetism; general methodological problems associated with present archaeomagnetic studies, such as sample collection, data measurement and analysis, and experimental control; and advances in experimental archaeology. Case histories consider both successful and unsuccessful applications of the technique in New World fieldwork. Raw data is provided in an appendix. While the volume deals specifically with problems of archaeomagnetic direction dating in the Americas, it should prove useful in constructing exact chronologies in other archaeological sites as well and in the geologic record at large. As the only single volume devoted to the subject, it will serve as the standard reference in the field.

The simple question "How did the Maya come up with a calendar that had only 260 days?" led Vincent Malmström to discover an unexpected "hearth" of Mesoamerican culture. In this boldly revisionist book, he sets forth his challenging, new view of the origin and diffusion of Mesoamerican calendrical systems—the intellectual achievement that gave rise to Mesoamerican civilization and culture. Malmström posits that the 260-day calendar marked the interval between passages of the sun at its zenith over Izapa, an ancient ceremonial center in the Soconusco region of Mexico's Pacific coastal plain. He goes on to show how the calendar developed by the Zoque people of the region in the fourteenth century B.C. gradually diffused through Mesoamerica into the so-called "Olmec metropolitan area" of the Gulf coast and beyond to the Maya in the east and to the plateau of Mexico

in the west. These findings challenge our previous understanding of the origin and diffusion of Mesoamerican civilization. Sure to provoke lively debate in many quarters, this book will be important reading for all students of ancient Mesoamerica—anthropologists, archaeologists, archaeoastronomers, geographers, and the growing public fascinated by all things Maya.

This book examines the recent phenomenon in Latin America of national Truth and Reconciliation commissions. Few studies have examined the role of Churches or religion in political processes that proclaim valued theological terms as their agenda - truth, forgiveness, and reconciliation. This book questions the role of religion, specifically of established Churches. The impact of such reconciliation commissions on Indigenous Native Americans is also examined, as is the role of women and how both commissions and Churches or religions were challenged by their experiences. The contributors offer differing perspectives on one or more national truth and reconciliation processes and thus offer a collection that serves as valuable source for the disciplines of Religious Studies, Ethics, Theology, Political Science, Social Sciences and Women's Studies.
