## GOODMAN CORTEZ

*The Gene's-Eye View of Evolution* Cambridge Scholars Publishing  
Five years in the writing by one of science fiction's most honored authors, *Doomsday Book* is a storytelling triumph. Connie Willis draws upon her understanding of the universalities of human nature to explore the ageless issues of evil, suffering and the indomitable will of the human spirit. For Kivrin, preparing an on-site study of one of the deadliest eras in humanity's history was as simple as receiving inoculations against the diseases of the fourteenth century and inventing an alibi for a woman traveling alone. For her instructors in the twenty-first century, it meant painstaking calculations and careful monitoring of the rendezvous location where Kivrin would be received. But a crisis strangely linking past and future strands Kivrin in a bygone age as her fellows try desperately to rescue her. In a time of superstition and fear, Kivrin—barely of age herself—finds she has become an unlikely angel of hope during one of history's darkest hours. Praise for *Doomsday Book* "A stunning novel that encompasses both suffering and hope. . . . The best work yet from one of science fiction's best writers."—The Denver Post "Splendid work—brutal, gripping and genuinely harrowing, the product of diligent research, fine writing and well-honed instincts, that should appeal far beyond the normal science-fiction constituency."—Kirkus Reviews (starred review) "The world of 1348 burns in the mind's eye, and every character alive that year is a fully recognized being. . . . It becomes possible to feel . . . that Connie Willis did, in fact, over the five years *Doomsday Book* took her to write, open a window to another world, and that she saw something there."—The Washington Post Book World  
*Early Breast Cancer* Chandos Publishing

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars

believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

*British Librarianship and Information Work 1991-2000* Legare Street Press

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

*The Cambridge Review* Ohio University Press

This book introduces the reader to the ongoing research on teaching English as a foreign language and highlights recent trends in theories of acquisition, teaching and development of communication and intercultural skills. As English as a third language is increasingly recognised as a common world reality, research around this particular subject certainly provides useful answers to questions regarding the most desirable pedagogical method when teaching it at school, the strategies that students use when learning foreign languages, the best age for introducing additional languages in the school curriculum, and the attitude of pupils when learning a foreign language, and English in particular, given its global significance. The contributions gathered here will give the reader a general idea of where research on English as a foreign language is heading now in the areas of teaching, pedagogy, intercultural and multilingual studies and teaching students with learning difficulties. The authors situate their research in current debates in terms of theory and empirical data. They address issues of English as a foreign language in a wide variety of settings, countries and orientations, coming from Brazil, Bulgaria, Chile, Cyprus, France, Germany, Greece, Italy, Portugal, Turkey, the UK and the USA.

*Rethinking American Grand Strategy* A&C Black

Across the globe, migration has been met with intensifying modes of criminalization and securitization, and claims for political asylum are increasingly met with suspicion. Asylum seekers have become the focus of global debates surrounding humanitarian obligations, on the one hand, and concerns surrounding national security and border control, on the other. In *Technologies of Suspicion and the Ethics of Obligation in Political Asylum*, contributors provide fine-tuned analyses of political asylum systems and the adjudication of asylum claims across a range of sociocultural and geopolitical contexts. The contributors to this timely volume, drawing on a variety of theoretical perspectives, offer critical insights into the processes by which tensions between humanitarianism and security are negotiated at the local level, often with negative consequences for asylum seekers. By investigating how a politics of suspicion within asylum systems is enacted in everyday practices and interactions, the authors illustrate how asylum seekers are often produced as suspicious subjects by the very systems to which they appeal for protection.

A wide-ranging rethinking of the many factors that comprise the making of American Grand Strategy. What is grand strategy? What does it aim to achieve? And what differentiates it from normal strategic thought--what, in other words, makes it "grand"? In answering these questions, most scholars have focused on

diplomacy and warfare, so much so that "grand strategy" has become almost an equivalent of "military history." The traditional attention paid to military affairs is understandable, but in today's world it leaves out much else that could be considered political, and therefore strategic. It is in fact possible to consider, and even reach, a more capacious understanding of grand strategy, one that still includes the battlefield and the negotiating table while expanding beyond them. Just as contemporary world politics is driven by a wide range of non-military issues, the most thorough considerations of grand strategy must consider the bases of peace and security—including gender, race, the environment, and a wide range of cultural, social, political, and economic issues. Rethinking American Grand Strategy assembles a roster of leading historians to examine America's place in the world. Its innovative chapters re-examine familiar figures, such as John Quincy Adams, George Kennan, and Henry Kissinger, while also revealing the forgotten episodes and hidden voices of American grand strategy. They expand the scope of diplomatic and military history by placing the grand strategies of public health, race, gender, humanitarianism, and the law alongside military and diplomatic affairs to reveal hidden strategists as well as strategies.

The Aim of Belief is the first book devoted to the question: 'what is belief?' Eleven newly commissioned essays by leading authors reflect the state of the art and further advance the current debate. The book will be key reading for researchers working on philosophy of mind and action, epistemology, and meta-ethics.

*The King of Andorra* Oxford University Press

The highly-respected book of reference of sought-after Independent Schools in membership of the Independent Schools Council's Associations: HMC, GSA, The Society of Heads, IAPS, ISA and COBIS.

*New Scientist* Ashgate Publishing, Ltd.

'Arvid Ågren has undertaken the most meticulously thorough reading of the relevant literature that I have ever encountered,

deploying an intelligent understanding to pull it into a coherent story. As if that wasn't enough, he gets it right.' (Richard Dawkins) To many evolutionary biologists, the central challenge of their discipline is to explain adaptation, the appearance of design in the living world. With the theory of evolution by natural selection, Charles Darwin elegantly showed how a purely mechanistic process can achieve this striking feature of nature. Since then, the way many biologists have thought about evolution and natural selection is as a theory about individual organisms. Over a century later, a subtle but radical shift in perspective emerged with the gene's-eye view of evolution in which natural selection was conceptualized as a struggle between genes for replication and transmission to the next generation. This viewpoint culminated with the publication of *The Selfish Gene* by Richard Dawkins (Oxford University Press, 1976) and is now commonly referred to as selfish gene thinking. The gene's-eye view has subsequently played a central role in evolutionary biology, although it continues to attract controversy. The central aim of this accessible book is to show how the gene's-eye view differs from the traditional organismal account of evolution, trace its historical origins, clarify typical misunderstandings and, by using examples from contemporary experimental work, show why so many evolutionary biologists still consider it an indispensable heuristic. The book concludes by discussing how selfish gene thinking fits into ongoing debates in evolutionary biology, and what they tell us about the future of the gene's-eye view of evolution. *The Gene's-Eye View of Evolution* is suitable for graduate-level students taking courses in evolutionary biology, behavioural ecology, and evolutionary genetics, as well as professional researchers in these fields. It will also appeal to a broader, interdisciplinary audience from the social sciences and humanities including philosophers and historians of science.

**Sustainability in Higher Education** John Wiley & Sons

First Prize, BMA Medical Book Awards 2013 Breast cancers are now detected earlier and are thus more likely to be confined to the breast itself and regional nodes. Many of these tumours will have minimal proclivity for hematogenous dissemination and formation of micrometastases. On the other hand, some patients have micrometastatic diseases which can remain dormant and be activated many years after initial diagnosis. *Early Breast Cancer: From Screening to Multidisciplinary Management* discusses the

principles and practice of breast cancer management with respect to both screen-detected and symptomatic disease. It provides readers with sound understanding and critical insight into many aspects of the disease from epidemiology, genetics, and screening to pathology, diagnosis, treatment, and prevention. This latest edition continues the general ethos of the second edition with an emphasis on early screening and continued development of the multidisciplinary team.

*British Farmer and Stock Breeder* Cambridge University Press

This volume examines the nature of second language listening proficiency and how it can be assessed. The book highlights the need for test developers to provide a clear explication of the ability constructs which underpin the tests they offer in the public domain. This is increasingly necessary if claims about the validity of test score interpretation and use are to be supported both logically and with empirical evidence. It operationalises a comprehensive test validation framework which adopts a socio-cognitive perspective. The framework embraces six core components, examining and then analysing Cambridge ESOL listening tasks from the following perspectives: Test Taker; Cognitive Validity; Context Validity; Scoring Validity; Criterion-related Validity; and Consequential Validity.

*Perspectives on Teaching, Multilingualism and Interculturalism*

Oxford University Press

Includes CD ROM on inside back cover. A project about the evaluation of English language teaching in Norwegian schools

*The Human Wreckage of the Battlefield as Witnessed by an American Hospital Nurse*

Support in higher education is an emerging area of great interest to professors, researchers and students in academic institutions.

Sustainability in Higher Education provides discussions on the exchange of information between different aspects of

sustainability in higher education. This book includes chapter contributions from authors who have provided case studies on various areas of education for sustainability. focus on sustainability present studies in aspects related with higher education explores a variety of educational aspects from an sustainable perspective

#### **The Backwash of War**

Students of radiology and radiography at both undergraduate and postgraduate level often experience difficulty in learning MRI techniques. This book provides concise, easily accessible information on MRI physics which can be used as a revision tool.

Topics covered include relaxation processes, image contrast,

pulse sequences, image production, image quality, artefacts, MRA, instrumentation and safety. Double page spreads for each section will contain a diagram and/or image depicting the main concepts of MR physics together with a succinct account of the topic in bullet points and tables.

#### **Research and Practice in Assessing Second Language Listening**

This important reference volume covers developments in almost every aspect of British library and information work during the ten-year period 1991-2000. The book provides a comprehensive record of what took place in library and information management during a decade of considerable change and challenges.
