*PocketGuide to Assessment in Speech-language Pathology*

Cambridge University Press

This is a practical, accessible manual for Speech and Language Therapists, Educational Psychologists and Educators who assess children with language impairments, explaining how and why to implement Dynamic Assessment and gives you a huge range of

ready-to-use, practical tools. Where normal assessments simply identify deficits, Dynamic Assessment also identifies the child's potential to learn by allowing for prompts from you, during the assessment, thus far better informing your decisions about appropriate interventions and strategies to help the children you work with. What does this manual offer? Provides a concise introduction to the principles of Dynamic Assessment to make clear the enormous benefits of applying this approach to the assessment of language. Presents a full example of a Dynamic Assessment of Sentence Structure (DASS) to demonstrate how the principles are implemented and the findings applied to plan

more effective interventions. All the materials for the DASS are included so that you can use this assessment immediately. Includes numerous templates, generic prompt sheets, score sheets and materials that you can adapt for use in Dynamic Assessments that you devise yourself. Written by Dr Natalie Hasson, a highly experienced Speech and Language Therapist who leads the field in researching the dynamic assessment of language, this is the only Dynamic Assessment manual of its kind.

Automated Speaking Assessment: Using Language Technologies to Score Spontaneous Speech provides a thorough overview of state-of-the-art automated speech scoring technology as it is currently used at Educational Testing Service (ETS). Its main focus is related to the automated scoring of spontaneous speech elicited by TOEFL iBT Speaking section items, but other applications of speech scoring, such as for more predictable spoken responses or responses provided in a dialogic setting, are also discussed. The book begins with an in-depth overview of the nascent field of automated speech scoring—its history, applications, and challenges—followed by a discussion of psychometric considerations for automated speech scoring. The

second and third parts discuss the integral main components of an automated speech scoring system as well as the different types of automatically generated measures extracted by the system features related to evaluate the speaking construct of communicative competence as measured defined by the TOEFL iBT Speaking assessment. Finally, the last part of the book touches on more recent developments, such as providing more detailed feedback on test takers' spoken responses using speech features and scoring of dialogic speech. It concludes with a discussion, summary, and outlook on future developments in this area. Written with minimal technical details for the benefit of non-experts, this book is an ideal resource for graduate students in courses on Language Testing and Assessment as well as teachers and researchers in applied linguistics.
