Sewn Product Quality: A  
Management Perspective  
takes complex industry-  
specific terminology and

processes and explains  
them with pictures and  
text that is relevant to  
today's market. The book  
discusses all aspects of  
quality, devoting separate  
sections to materials and  
processes and focusing  
specifically on the new  
consumer-centric  
business environment.  
Taking a managerial

perspective, it presents  
definitions, techniques,  
and standards unique to  
the sewn products  
industry and shows how  
to impact quality  
throughout the design,  
production and delivery  
process.

Plasma technologies present an environmentally-friendly and versatile way of treating textile materials in order to enhance a variety of properties such as wettability, liquid repellency, dyeability and coating adhesion. Recent advances made in commercially viable plasma systems have greatly increased the potential of using plasma technology in industrial textile finishing. This pioneering book provides an essential guide to both

the technology and science related to plasmas and its practical applications in the textile industry. The first part of the book discusses the science and technology behind plasmas. Chapters give detailed and comprehensive descriptions on the characteristics of plasmas and methods of control and treatment in the processing of textiles. Both low pressure cold plasma and atmospheric pressure cold plasma processes are described as well as the diagnosis

and control of plasma parameters in plasma generating reactors. A chapter is devoted to the use of plasma technology to achieve nanoscale treatment of textile surfaces. The second part of the book concentrates on specific applications of plasma technologies. Chapters cover treatments for water and oil repellency of textiles, engineering of biomedical textiles and woollen finishing techniques through the use of plasma technologies. Further chapters cover the

modification of fibres for use in composites and the potential use of plasma technologies for the finishing of fabrics made of man made fibres. The final chapter in the book gives a comprehensive analysis of the surface chemical and physical characterisation of plasma treated fabrics. Written by a distinguished international team of experts, *Plasma technologies for textiles* is an invaluable reference for researchers, scientists and technologists alike. Summarises both the

science and technology of plasma processing, and its practical applications. Discusses how plasma technology improves textile properties such as wettability and liquid repelling. An invaluable reference for researchers, scientists and technologists. *CleanRooms* Elsevier. The intimate apparel business is undergoing major technological change. New measurement and design techniques, combined with innovative materials and production methods,

are transforming the range, quality and applications of women's lingerie. This important book provides an authoritative review of these developments. After an introductory chapter on the concept of body beauty, a first group of chapters discuss innovations in the manufacture of brassieres, including developments in breast measurement and sizing, innovations in bra design and improvements in bra pattern technology. The following sequence of

chapters reviews key developments in girdles. Topics discussed include innovations in girdle design and use and research on the physiological effects of body shapers. The book concludes by assessing developments in intimate apparel with special functions such as sports bras, and innovation in knitted and seamless intimate apparel. Innovation and technology of women's intimate apparel is a standard reference for designers and engineers working in

this important area of the textile industry. Reviews the technological and innovative developments of ladies intimate apparel Describes the research principles and scientific understandings of size, materials, pattern and fit to achieve functional and technical design Written by leading experts in the field

**Synthetic Polymeric Membranes for Advanced Water Treatment, Gas Separation, and Energy Sustainability** Springer  
This major textbook is

designed for students studying textiles and fashion at higher and undergraduate level, as well as those needing a comprehensive and authoritative overview of textile materials and processes. The first part of the book reviews the main types of natural and synthetic fibres and their properties. Part two provides a systematic review of the key processes involved first in converting fibres into yarns and then transforming yarns into fabrics. Part three

discusses the range of range of finishing techniques for fabrics. The final part of the book looks specifically at the transformation of fabric into apparel, from design and manufacture to marketing. With contributions from leading experts in their fields, this major book provides the definitive one-volume guide to textile manufacture. Provides comprehensive coverage of the types and properties of textile fibres to yarn and fabric manufacture, fabric

finishing, apparel production and fashion Focused on the needs of college and undergraduate students studying textiles or fashion courses Each chapter ends with a summary to emphasise key points, a comprehensive self-review section, and project ideas are also provided  
Wearable Nanotechnology  
Prentice Hall  
As consumer demands for specific attributes in their textiles increase and global competition

intensifies, it is important that the industry finds ways of engineering certain performance requirements into textiles and apparel. This book reviews how fabrics and garments can be engineered to meet technical performance and other characteristics required for the specific end-use. Chapters begin with fabric and garment handle and making – up performance, followed by wear appearance issues, such as wrinkling, pilling and bagging. Further chapters include fabric

and garment drape, durability related issues, as well as physiological and psychological comfort. Key topics of fire retardancy, waterproofing, breathability and ultraviolet protection are also discussed. Written by two highly distinguished authors, this is an invaluable book for a wide range of readers in the textile and apparel industries, ranging from textile and garment manufacturers, designers, researchers, developers to buyers. Reviews the

engineering of fabrics to meet technical performance requirements for specific end-use Chapters examine various wear appearance issues such as wrinkling, bagging and fabric and garment drape Discusses durability related issues including fire retardancy and waterproofing as well as psychological and physiological fabric comfort  
[Engineering Apparel Fabrics and Garments](#)  
 Springer Nature  
 Wear comfort has been

listed as the most important property of clothing demanded by users and consumers according to recent studies. A fundamental understanding of human comfort and a knowledge of how to design textiles and garments to maximise comfort for the wearer is therefore essential in the clothing industry. Improving comfort in clothing reviews the latest developments in the manufacturing of comfortable apparel and discusses methods of

improving it in various articles of clothing. The book begins by outlining the fundamentals of human comfort in clothing, from the human perception of comfort in apparel and factors which affect it such as the properties of fibres and fabrics, to laboratory testing, analysing and predicting of the comfort properties of textiles. Part two discusses methods of improving comfort in apparel, from controlling thermal comfort and managing moisture, to enhancing body

movement comfort in various garments. Part three reviews methods of improving comfort whilst maintaining function in specific types of clothing such as protective garments, sports wear and cold weather clothing. The international team of contributors to *Improving comfort in clothing* has produced a unique overview of numerous aspects of clothing comfort, provides an excellent resource for researchers and designers in the clothing industry. It will also be beneficial for

academics researching wear comfort. Reviews the latest developments in the manufacturing of comfortable apparel and discusses methods of improving fit in various articles of clothing. An overview of how to design textiles and garments to maximise comfort begins with factors affecting comfort and properties of fibres and fabrics that contribute to human comfort. Improvements in thermal and tactile comfort and moisture management are explored featuring developments in

textile surfaces

Few are more vulnerable to infectious disease exposure than laboratory staff. On a daily basis, laboratorians handle samples, specimens, and substances that, if handled improperly, could infect both staff and patients. Does your lab have a plan in place to handle an infectious disease event?

Introducing the first fully comprehensive resource on infection control (IC)

written exclusively for labs, *Laboratory Infection Control: Essential Procedures for Compliance*. This all-in-one IC compliance guide covers all the critical regulatory information lab staff need to know when crafting and following an effective infection control program. As labs face new threats of emerging communicable diseases, infection control has come to the forefront of lab safety. The 2006 Joint Commission laboratory accreditation standards dictate that labs must

prepare to respond to an influx of infectious patients. Now, more than ever, it is vital that your lab have a plan in place to prevent the introduction of healthcare-associated infections recognize when patients and staff have become infected contain the risk or spread of infection safely *Laboratory Infection Control* makes these critical action points easier than ever to implement in your facility. Finally, a resource to meet YOUR needs! *Laboratory Infection*

Control is the only resource available that provides the essential tips, tools, and instructions for creating or redesigning a successful IC plan for labs. In just 150 easy-to-read pages, you'll learn how to assess the risks of transmission of communicable diseases within the lab and create a safe work environment. This user-friendly guide includes all the latest regulations and guidelines from OSHA to the CDC, and offers 1-2-3 strategies for establishing best practice in employee

health and safety isolation precautions aseptic techniques engineering controls infectious-waste management hand hygiene biosafety levels and more! P  
*Innovation and Technology of Women's Intimate Apparel*  
Woodhead Publishing  
Optimization and decision making are integral parts of any manufacturing process and management system. The objective of this book is to demonstrate the confluence of theory and applications of various

types of multi-criteria decision making and optimization techniques with reference to textile manufacturing and management. Divided into twelve chapters, it discusses various multi-criteria decision-making methods such as AHP, TOPSIS, ELECTRE, and optimization techniques like linear programming, fuzzy linear programming, quadratic programming, in textile domain. Multi-objective optimization problems have been dealt with two approaches, namely desirability

function and evolutionary algorithm. Key Features Exclusive title covering textiles and soft computing fields including optimization and decision making Discusses concepts of traditional and non-traditional optimization methods with textile examples Explores pertinent single-objective and multi-objective optimizations Provides MATLAB coding in the Appendix to solve various types of multi-criteria decision making and optimization problems Includes examples and

case studies related to textile engineering and management ICCAP 2021 Springer Science & Business Media Advanced Textiles for Wound Care, Second Edition, provides a detailed review of how textiles are incorporated into wound care applications, also explaining the importance and suitability of using textiles on different wound types. It is an interdisciplinary book which directly links textile technology with advances in wound care. The book

discusses new developments and techniques related to antimicrobial dressings, the use of biopolymers in infection control management, advanced dressings for managing cavity and cancerous wounds, and the application of nanofibers and novel textile structures in scaffolds, among other new areas. This updated edition also reflects recent changes in regulatory affairs. The book is essential reading for manufacturers, designers, scientists and

producers of wound care materials. It is a valuable resource for professionals within the medical sector, as well as those in academia, enabling materials scientists and engineers in both academia, and at medical device companies, to stay abreast of new technology. Provides a comprehensive introduction to wound care, from the different types of wound and wound healing mechanisms, to the importance of testing in relation to wound care

Analyzes the application of textiles to wound healing, covering minor wounds, burns, ulcers and other deep skin wounds  
Reviews the current use of smart textiles for wound care, including drug delivery dressings and textile-based scaffolds for tissue engineering  
Assessment of Environmental Impact by Grocery Shopping Bags  
CRC Press  
An authentic resource for the fundamentals, applied techniques, applications and recent advancements

of all the main areas of technical textiles  
Created to be a comprehensive reference, High Performance Technical Textiles includes the review of a wide range of technical textiles from household to space textiles. The contributors—noted experts in the field from all the continents—offer in-depth coverage on the fibre materials, manufacturing processes and techniques, applications, current developments, sustainability and future

trends. The contributors include discussions on synthetic versus natural fibres, various textile manufacturing techniques, textile composites and finishing approaches that are involved in the manufacturing of textiles for a specific high performance application. Whilst the book provides the basic knowledge required for an understanding of technical textiles, it can serve as a springboard for inspiring new inventions in hi-tech fibres and

textiles. This important book: Contains a unique approach that offers a comprehensive understanding of the manufacturing and applications of technical textiles Includes a general overview to the fundamentals, current techniques, end use applications as well as the most recent advancements Explores the current standards in the industry and the ongoing research in the field Offers a comprehensive and single source reference on the

topic Written for academics, researchers and professionals working in textile and related industries, High Performance Technical Textiles offers a systematic, structured, logical and updated source of information for understanding technical textiles.

Advanced Textile Testing Techniques Elsevier

This textbook addresses the pathway to reach sustainability in fashion business and apparel sectors. This book contains various research

papers originally contributed by different authors from various organizations who are all working towards the eco-friendly manufacturing of apparel products. This textbook provides approaches, techniques, alternative procedures/sustainable routes to develop sustainable apparel in a more environmentally friendly manner for the future. The research papers discussed in this book mainly focus on the various challenges put forth by the apparel

industry with respect to environmentally friendly product manufacturing and also provides solutions to achieve the same through different principles and approaches which fulfil the production, user and disposal ecological considerations. The book will be really useful for academicians, industry personnel and to textile and apparel students and scholars who wish to explore their knowledge and innovations in the field of sustainable apparel product

manufacturing and processes.

**Clothing Biosensory Engineering** Woodhead Publishing

This book reviews the manufacturing processes of different shopping bags used for grocery purposes, life cycle impacts, modelling of life cycle impacts, carbon and eco-footprints in different countries, consumption of shopping bags in different countries, consumer behaviour of shopping bags in various countries and its relation to eco-impact, assessment of

functionality of shopping bags, concept and framework of eco-functional assessment of shopping bags, biodegradation of shopping bags, etc.

*Textiles for Hygiene and Infection Control*

Innovation and Technology of Women's Intimate Apparel

This book provides a broad understanding of the main computational techniques used for water hammer research in water systems. The theoretical background to a number of techniques is

introduced, and general data analysis techniques and examining the application of techniques in an industrial setting, including current practices and current research, are considered. The book also provides practical experience of commercially available systems and includes small-scale water systems related projects.

**Plasma Technologies for Textiles** CRC Press  
Active Coatings for Smart Textiles presents the latest information on active materials and their

application to textiles in the form of coatings and finishes for the purpose of improving performance and creating active functional effects. This important book provides detailed coverage of smart coating types, processes, and applications. After an introduction to the topic, Part One introduces various types of smart and active coatings, including memory polymer coatings, durable and self-cleaning coatings, and breathable coatings. Technologies

and related processes for the application of coatings to textiles is the focus of Part Two, with chapters devoted to microencapsulation technology, plasma surface treatments, and nanotechnology-based treatments. The book ends with a section on applications of smart textiles with responsive coatings, which are increasingly finding commercial niches in sportswear, protective clothing, medical textiles, and architecture. Introduces various types

of smart and active coatings for textiles Covers technologies and application processes for the coating and finishing of textiles Reviews commercial applications of such coatings, including in sportswear, protective clothing, medical textiles and architecture  
**Recent Trends in Traditional and Technical Textiles**  
Woodhead Publishing  
Textile testing is an important field of textile sciences involving experimental evaluation of conventional as well as

technical textile products. This book aims to provide technical details, required protocols and procedures for conducting any specific evaluation test along with key parameters. The book covers the topics in two main sections, first one for the conventional textile testing techniques starting from fiber to final product while the second one focusses on testing of technical textiles. Written with a reader friendly approach, it will cater to graduate students in textile engineering as well

as industry personnel, focusing on following key points: Addresses all techniques for testing both conventional and technical textiles. Describes testing techniques compliance with the latest requirements of the updated EN ISO and AATCC standards. Provides detailed description on the testing of technical textiles and their products. Discusses the operations conditions, like atmospheric conditions, and human error with cause and

effect diagrams. Covers both destructive and non-destructive testing.  
**An Eco-Functional Approach** European Alliance for Innovation  
 The present book volume presents a holistic view of the aspects of nanobiomaterials incl. their stellar merits and limitations, applications in diverse fields, their futuristic promise in the fields of biomedical science and drug delivery. The federal & regulatory issues on the usage of nanobiomaterials have been assigned due

consideration.  
*Improving Comfort in Clothing* Elsevier  
 This proceeding constitutes the thoroughly refereed proceedings of the 1st International Conference on Combinatorial and Optimization, ICCAP 2021, December 7-8, 2021. This event was organized by the group of Professors in Chennai. The Conference aims to provide the opportunities for informal conversations, have proven to be of great interest to other scientists and analysts employing

these mathematical sciences in their professional work in business, industry, and government. The Conference continues to promote better understanding of the roles of modern applied mathematics, combinatorics, and computer science to acquaint the investigator in each of these areas with the various techniques and algorithms which are available to assist in his or her research. We selected 257 papers were carefully

reviewed and selected from 741 submissions. The presentations covered multiple research fields like Computer Science, Artificial Intelligence, internet technology, smart health care etc., brought the discussion on how to shape optimization methods around human and social needs.

Latest Material and Technological Developments for Activewear provides comprehensive coverage of academic research and industrial advances in this fast-moving field. As society becomes more health conscious, athleisure and sportswear have arrived as key fashion items in the global

apparel market. In this book, designers and material scientists will find information on fibers and textiles, new processes, emerging technologies, and new applications that have helped to deliver this new wave of products. In addition to these technical details, the book covers consumer behavior, along with product design and manufacturing.

*Latest Material and Technological Developments for Activewear* John Wiley & Sons

Coating and lamination offer methods of improving and modifying the physical properties and appearance of fabrics and also the development of entirely new products by combining the benefits of fabrics, polymers and films. This detailed book covers all aspects of coating and lamination within the textile industry including - compound ingredients, how to set and adhere to strictly controlled processing conditions, the accurate control of production variables, the safe

handling of toxic materials and the ongoing research into future products which will facilitate recycling and disposal. This book is particularly useful in the insight it gives about the challenges and opportunities that these new treatments offer and is essential reading for technologists, chemists and production engineers working in this exciting field. Authoritative review of the latest developments in coating and lamination processes for textiles Focuses on the

importance of setting and conditions Written by the Textiles in automotive
