Every day for the next twenty years, more than 10,000 people in

the United States will turn 65. With life expectancies increasing as well, many of these Americans will eventually require round-the-clock attention—and we have only begun to prepare for the challenge of caring for them. In *Labors of Love*, Jason Rodriquez examines the world of the fast-growing elder care industry, providing a nuanced and balanced portrait of the day-to-day lives of the people and organizations that devote their time to supporting America's aging population. Through extensive ethnographic research, interviews with staff and management, and analysis of internal documents, Rodriquez explores the inner workings of two different nursing homes—one for-profit and one non-profit—to understand the connections among the administrative regulations, the professional requirements, and the type of care provided in both types of facilities. He reveals a variety of challenges that nursing home care workers face day to day: battles over the budget; the administrative hurdles of Medicaid and Medicare; the employees' struggle to balance financial stability and compassionate care for residents. Yet, Rodriquez argues, nursing home workers give meaning and dignity to their work by building emotional attachments to residents and their care. An unprecedented study, *Labors of Love* brings new insight into the underlying structures of a crucial and expanding sector of the American health care system.

Shortly before her death in 2004, Elisabeth Kübler-Ross and David Kessler, her collaborator, completed the manuscript for this, her final book. On Grief and Grieving is a fitting completion to her work. Thirty-six years and sixteen books ago, Kübler-Ross's groundbreaking On Death and Dying changed the way we talk about the end of life. Now On Grief and Grieving will profoundly influence the way we experience the process of grief. On Death and Dying began as a theoretical book, an interdisciplinary study of our fear of death and our inevitable acceptance of it. It introduced the world to the now-famous five stages: denial, anger, bargaining, depression, and acceptance. On Grief and Grieving applies these stages to the process of grieving and weaves together theory, inspiration, and practical advice, all based on Kübler-Ross's and Kessler's professional and personal experiences, and is filled with brief, topic-driven stories. It includes sections on sadness, hauntings, dreams, coping, children, healing, isolation, and even the subject of sex during grief. "I know death is close," Kübler-Ross says at the end of the book, "but not quite yet. I lie here like so many people over the

years, in a bed surrounded by flowers and looking out a big window....I now know that the purpose of my life is more than these stages....It is not just about the life lost but also the life lived." In one of their final writing sessions, Kübler-Ross told Kessler, "The last nine years have taught me patience, and the weaker and more bed-bound I become, the more I'm learning about receiving love." On Grief and Grieving is Elisabeth Kübler-Ross's final legacy, one that brings her life's work profoundly full circle.

The Long-Term Care Restorative Nursing Desk Reference Springer Publishing Company

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
