Webinar On-Demand: Demystifying Device Tree for NXP® i.MX Processors *Webinar: How to design a scalable embedded product using NXP's i.MX applications processor families* *Machine learning for embedded systems at the edge by NXP \u0026 Arm* General Description Nxp1. General description The K32W061 and K32W041 (called K32W061 throughout this document) are ultra-low power, high performance Arm® Cortex-M4 based wireless microcontrollers supporting Zigbee 3.0, Thread and Bluetooth Low Energy 5.0 networking stacks to facilitate home1. General description - NXP Semiconductors General description. NXP Semiconductors developed the MIFARE Ultralight Nano MF0UN(H)00 for use in a contactless smart ticket, smart card or token in combination with a Proximity Coupling Device (PCD). The MF0UN(H)00 is designed to work in an ISO/IEC 14443 Type A compliant environment (see Ref. 1). The target applications include single trip or limited use tickets in public transportation networks, loyalty cards or day passes for events.1. General description - NXP1. General description. The Low IF Tuner High performance One chips, TEF6686 and TEF6688, are single-chip radio ICs including an AM/FM radio tuner and software-defined radio signal processing. They extend NXP Semiconductors' broad, industry-proven car radio single tuner portfolio, offering outstanding radio performance with the widest range of features and state of the art software algorithms at most optimized system costs.1. General description - NXP1. General description. The TJA1044 is part of the Mantis family of high-speed CAN transceivers. It provides an interface between a Controller Area Network (CAN) protocol controller and the physical two-wire CAN bus. The transceiver is designed for high-speed CAN applications in the automotive industry, providing the differential transmit and receive capability to (a microcontroller with) a CAN protocol controller.1. General description - NXP1. General description The NXP LPC8N04 is an IC optimized for an entry level Cortex-M0+ MCU with built-in NFC interface. LPC8N04 supports an effective system solution with a minimal number of external components for NFC related applications. The embedded ARM Cort ex-M0+ offers flexibility to the user s of this IC to implement their1. General description - NXP Semiconductors1. General description The UJA1169A is a mini high-speed CAN System Basis Chip (SBC) containing an ... Product data sheet Rev. 1 — 12 May 2020 4 of 80

NXP Semiconductors UJA1169A Mini high-speed CAN SBC with optional partial networking 3. Product family overview Table 1. Feature overview of UJA1169A SBC family1. General description - nxp.com1. General description The PCAL6416A is a 16-bit general-purpose I/O expander that provides remote I/O expansion for most microcontroller families via the I2C-bus interface. NXP I/O expanders provide a simple solution when additional I/Os are needed while keeping interconnections to a minimum, for example, in battery-powered mobile1. General description - NXP1. General description PTN3366 is a low power, high-speed level shifter device which converts four lanes of low-swing AC-coupled differential input signals to DVI v1.0 and HDMI v1.4b compliant open-drain current-steering differential output signals, up to 3 Gbit/s per lane to support1. General description - NXP Semiconductors1. General description PTN5110 is a single-port TCPC compliant USB Power Delivery (PD) PHY IC that implements Type-C Configuration Channel (CC) interface and USB PD Physical layer functions to a Type-C Port Manager (TCPM) that handles PD Policy management. It is designed to comply with USB PD [1], Type-C [2] and TCPC [3] specifications. This IC is1. General description - NXP Semiconductors1. General description The PCAL6408A is an 8-bit general-purpose I/O expander that provides remote I/O expansion for most microcontroller families via the I2C-bus interface. NXP I/O expanders provide a simple solution when additional I/Os are needed while keeping interconnections to a minimum, for example, in battery-powered mobile1. General description - NXP Semiconductors1. General description The PN532 is a highly integrated transceiver module for contactless communication at 13.56 MHz based on the 80C51 microcontroller core. It supports 6 different operating modes: • ISO/IEC 14443A/MIFARE Reader/Writer • FeliCa Reader/Writer • ISO/IEC 14443B Reader/Writer1. General description - nxp.com.cn1. General description PTN5100 is a single port USB Type-C Power Delivery (PD) PHY and Protocol IC that ... Product data sheet Rev. 1 — 1 August 2016 2 of 52 NXP Semiconductors PTN5100 USB Type-C power delivery PHY and protocol IC 2. Features and benefits 2.1 USB PD and Type-C Features Complies with USB PD[1] and USB Type-C[2] specifications ...1. General description1. General description NXP Semiconductors has developed the MIFARE Classic MF1S70yyX to be used in a contactless smart card according to ISO/IEC 14443 Type A. The MIFARE Classic 4K MF1S70yyX IC is used in applications like public transport ticketing and can also be used for various other applications. 1.1
