This is a concise, easy to use, step-by-step guide for applied researchers conducting exploratory factor analysis (EFA) using the open source software R. In this book, Dr. Watkins systematically reviews each decision step in EFA with screen shots of R and RStudio code, and recommends evidence-based best practice procedures. This is an eminently applied, practical approach with few or no formulas and is aimed at readers with little to no mathematical background. Dr. Watkins maintains an accessible tone throughout and uses minimal jargon and formula to help facilitate grasp of the key issues users will face while applying EFA, along with how to implement, interpret, and report results. Copious scholarly references and quotations are included to support the reader in responding to editorial reviews. This is a valuable resource for upper-level undergraduate and postgraduate students, as well as for more experienced researchers undertaking multivariate or structure equation modeling courses across the behavioral, medical, and social sciences.

A landmark publication in occupational therapy and a significant contribution to the rehabilitation theory literature! The Kawa Model presents a new conceptual model of practice that differs from contemporary theories in regard to: origin (East Asia), underlying philosophical base (East Asia), being heavily infused with a natural-ecological, holistic world view, and relational structure. The model is based on the metaphor of nature (a river) that stands for the meanings of life. Because of the familiarity of the metaphor, to both therapists and clients alike, the Kawa Model is relatively easy to comprehend, remarkably simple, yet comprehensive and effective. Unlike other models, it was raised from clinical practice, by practitioners, through a process of qualitative research methods. It is the first conceptual model and substantial theoretical work of occupational therapy from outside of the Western world. A 'must-read' for all students of occupational therapy The first substantial work in occupational therapy from outside of the Western world Introduces an Eastern perspective on matters of theory and culture in occupational therapy Eight case studies, four from Western practice contexts and four from the East Developed by clinicians and practitioners for their peers Questions the cultural boundaries of occupational therapy, its knowledge (epistemology), theory and practice. It puts the reader in touch with the cultural nature of self, client and profession Enables readers to develop critical analysis skills for examining matters of theory and culture, as opposed to learning theory as 'recipes'

This is a core text for courses across mental health service disciplines, including counselling, social work, psychology, public health, and nursing. It was developed by the author for her course in counseling services and administration as a response to her frustration for a comprehensive book that takes students through all the necessary components involved in developing a mental health community program (such as reducing teen pregnancy, increasing access for minorities, health promotion and prevention). This book is unique in its coverage of all the main areas required to plan and implement a community program, but it goes a step further by including important information on sustaining the program, budgeting, funding, community resource development, and fully implementing the program. In addition, the author has developed a number of tools that aid the student in developing a community program (usually a required class project) including exercises to help with needs assessment and planning, as well as exercises and quizzes, which will be included in a cd with the book. The book presents the author's 13-step model that guides a student through the entire process of planning and developing a mental health community program.
