Many Americans believe that people who lack health insurance somehow get the care they really need. *Care Without Coverage* examines the real consequences for adults who lack health insurance. The study presents findings in the areas of prevention and screening, cancer, chronic illness, hospital-based care, and general health status. The committee looked at the consequences of being uninsured for people suffering from cancer, diabetes, HIV infection and AIDS, heart and kidney disease, mental illness, traumatic injuries, and heart attacks. It focused on the roughly 30 million-one in seven-working-age Americans without health insurance. This group does not include the population over 65 that is covered by Medicare or the nearly 10 million children who are uninsured in this country. The main findings of the report are that working-age Americans without health insurance are more likely to receive too little medical care and receive it too late; be sicker and die sooner; and receive poorer care when they are in the hospital, even for acute situations like a motor vehicle crash.

The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. *The Future of the Public's Health in the 21st Century* reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and

practitioners, business and community leaders, health advocates, educators and journalists.

The Social Security Administration (SSA) administers two programs that provide benefits based on disability: the Social Security Disability Insurance (SSDI) program and the Supplemental Security Income (SSI) program. This report analyzes health care utilizations as they relate to impairment severity and SSA's definition of disability. *Health Care Utilization as a Proxy in Disability Determination* identifies types of utilizations that might be good proxies for "listing-level" severity; that is, what represents an impairment, or combination of impairments, that are severe enough to prevent a person from doing any gainful activity, regardless of age, education, or work experience.

Health Insurance is a Family Matter is the third of a series of six reports on the problems of uninsurance in the United States and addresses the impact on the family of not having health insurance. The book demonstrates that having one or more uninsured members in a family can have adverse consequences for everyone in the household and that the financial, physical, and emotional well-being of all members of a family may be adversely affected if any family member lacks coverage. It concludes with the finding that uninsured children have worse access to and use fewer health care services than children with insurance, including important preventive services that can have beneficial long-term effects.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development,

academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. *Making Eye Health a Population Health Imperative: Vision for Tomorrow* proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

Nearly everyone agrees that the nation's health care system needs to be reformed. By mid-1994 over a half-dozen major reform plans were under consideration in Congress. But beyond the political challenge of passing a reform package lies an even bigger challenge—how to make health reform work! Critics of the Clinton plan have charged that it's too complex and doomed to administrative failure. Are they right? The nation's health care finance and delivery systems are already immensely complex and problem-ridden. Is it possible to achieve meaningful reforms without adopting new administrative strategies and structures that are equally complex? What role do the states now play in administering the nation's health care system? Is it possible to design administrative success into national health reform plans from the start? Produced in close consultation with state health care officials from all around the country, this important volume offers practical and timely recommendations for how to make health reform work. It addresses the central implementation, management, and federalism dimensions of reform. Chapters by some of the country's leading

health policy and public management experts explore the administrative challenges of reform as they relate to health alliances, cost containment, quality of care, medical education and training, and other key issues. They discuss various working principles for developing an administratively sound health reform policy. The contributors are Lawrence D. Brown and Michael Sparer, Columbia University; Gerald Garvey, Princeton University; Donald F. Kettl, University of Wisconsin-Madison; James R. Tallon, United Hospital Fund; James W. Fossett and Frank J. Thompson, State University of New York, Albany.

From its inception, the public safety net in the United States has excluded many people because of their race, gendered roles, or other factors. As a result, they must prove their moral worthiness to get resources for themselves and their families. In *When Care Is Conditional*, sociologist Dani Carrillo reveals the ramifications of this conditional safety net by focusing on one particularly vulnerable population: undocumented immigrants. Through in-depth interviews with Latinx immigrants in northern California, Carrillo examines three circumstances—place, gender, and immigration status—that intersect to influence an individual's access to health care, food assistance, and other benefits. She demonstrates that place of residence affects undocumented immigrants' ability to get care since more services are available in urban areas, where many immigrants cannot afford to live, than suburban areas, where public transportation is limited. She also shows that while both men and women who are undocumented have difficulty obtaining care, men often confront more challenges. Undocumented women who are pregnant or mothers are eligible for some government safety net programs and rely on informal coethnic networks or a "guiding figure"—a relative, friend, neighbor, or coworker—who explains how to get care and makes them feel confident in accessing it. Most undocumented men, in contrast, are not eligible for public programs except in a medical emergency and often lack someone to guide them directly to care. Men sometimes steer one another to jobs through worker centers—where they may learn about various services and take advantage of those that increase their employability, like English or computer classes—but a culture of masculinity leads them to downplay medical problems and seek health care only in a crisis. As undocumented immigrants navigate this exclusionary system, Carrillo finds that they resist the rhetoric stigmatizing them as lawbreakers. Dismissing the importance of "papers" and highlighting their work ethic, they question the fairness of U.S. immigration policies and challenge ideas about who deserves care. Carrillo offers concrete recommendations, such as improving labor conditions and reexamining benefit eligibility, to increase access to care for not only undocumented immigrants but also people who have been excluded because of their race, criminal record, gender identity, sexual orientation, or disability. She argues that working with and across populations creates a powerful form of solidarity in advocating for inclusive care. *When Care Is Conditional* provides compelling insights into how safety net and immigration policies intersect to affect people's everyday lives and calls for a cultural shift so that the United States can provide unconditional care for all.

America's Children is a comprehensive, easy-to-read analysis of the relationship between health insurance and access to care. The book addresses three broad questions: How is children's health care currently financed? Does insurance equal access to care? How should the nation address the health needs of this vulnerable population? America's Children explores the changing role of Medicaid under managed care; state-initiated and private sector children's insurance programs; specific effects of insurance status on the care children receive; and the impact of chronic medical conditions and special health care needs. It also examines the status of "safety net" health providers, including community health centers, children's hospitals, school-based health centers, and others and reviews the changing patterns of coverage and tax policy options to increase coverage of private-sector, employer-based health insurance. In response to growing public concerns about uninsured children, last year Congress voted to provide \$24 billion over five years for new state insurance initiatives. This volume will serve as a primer for concerned federal policymakers and regulators, state agency officials, health plan decisionmakers, health care providers, children's health advocates, and researchers.

The strengths and abilities children develop from infancy through adolescence are crucial for their physical, emotional, and cognitive growth, which in turn help them to achieve success in school and to become responsible, economically self-sufficient, and healthy adults. Capable, responsible, and healthy adults are clearly the foundation of a well-functioning and prosperous society, yet America's

future is not as secure as it could be because millions of American children live in families with incomes below the poverty line. A wealth of evidence suggests that a lack of adequate economic resources for families with children compromises these children's ability to grow and achieve adult success, hurting them and the broader society. A Roadmap to Reducing Child Poverty reviews the research on linkages between child poverty and child well-being, and analyzes the poverty-reducing effects of major assistance programs directed at children and families. This report also provides policy and program recommendations for reducing the number of children living in poverty in the United States by half within 10 years.
