The Health Systems in Transition (HiT) profiles are country-based reports that provide a detailed description of a health system and of reform and policy initiatives in progress or under development in a specific country. Each profile is produced by country experts in collaboration with an international editor. In order to facilitate comparisons between countries, the profiles are based on a common template used by the Asia Pacific and European Observatories on Health Systems and Policies. The template provides detailed guidelines and specific questions, definitions and examples needed to compile a profile.

Hospital Pathology Laboratories BoD – Books on Demand

This volume brings together for the first time three of Romen Bose's major historical works – *Secrets of the Battlebox*, *The End of the War*, and *Kranji* – in a panoramic account of Singapore's experience in WWII. Sealed off and forgotten until the late 1990s, the Battlebox beneath Fort Canning served as the British Command HQ during the war. What actually happened in this underground nerve centre of the Malayan Campaign? Drawing on top-secret documents only recently opened to research, the author investigates the workings of the Battlebox and the fascinating role it played. Having lost their "impregnable fortress" of Singapore, the British were diverted to the European theatre of war. How then, when the Japanese surrendered, did they prepare to return to their erstwhile colonies? This book goes behind the scenes to investigate the circumstances, events, and unforgettable cast of characters that led up to liberation. Finally, the book considers those who fought and died in the war, and their ways in which they have been remembered in post-war Singapore, with Kranji cemetery and memorial as the centrepiece of the efforts. *Singapore At War* contains new findings which have come to light since the publication of the individual books, giving an unprecedented breadth and depth of perspective to this historical account.

Pelvic Floor Re-education encompasses a variety of techniques for increasing the strength of, and control over, the pelvic floor muscles. These techniques are now emerging as an effective and viable alternative to surgery in the treatment of urinary incontinence and related conditions. This volume presents a reasoned, scientific approach to the use of pelvic floor re-education. Starting with the latest theories on anatomy, pathophysiology and possible causes of pelvic floor damage, the text then describes the importance of pelvic floor evaluation in determining the type of treatment required. A number of re-education techniques are assessed including isolated muscle exercise, vaginal cones, biofeedback control and electrical stimulation. Recent research work is also reviewed which allows the reader to evaluate the different modalities advocated in the management of pelvic floor dysfunction.

Benson & Pernoll's Handbook of Obstetrics & Gynecology Routledge

This publication presents a detailed review and assessment of the governance, infrastructure, and financing aspects of hospital care in Pakistan's Khyber Pakhtunkhwa Province. Fast demographic growth, poor access to and utilization of health services, an underfunded public health system, and fragmented reform initiatives are among the key challenges in the province. The Government of Khyber Pakhtunkhwa commissioned the Asian Development Bank to conduct the review to aid the creation of a comprehensive strategy to guide investments and projects in the health sector.

Bioinformatics is an integrative field of computer science, genetics, genomics, proteomics, and statistics, which has undoubtedly revolutionized the study of biology and medicine in past decades. It mainly assists in modeling, predicting and interpreting large multidimensional biological data by utilizing advanced computational methods. Despite its enormous potential, bioinformatics is not widely integrated into the academic curriculum as most life science students and researchers are still not equipped with the necessary knowledge to take advantage of this powerful tool. Hence, the primary purpose of our book is to supplement this unmet need by providing an easily accessible platform for students and researchers starting their career in life sciences. This book aims to avoid sophisticated computational algorithms and programming. Instead, it focuses on simple DIY analysis and interpretation of biological data with personal computers. Our belief is that once the beginners acquire these basic skillsets, they will be able to handle most of the bioinformatics tools for their research work and to better understand their experimental outcomes. Our second title of this volume set In Silico Life Sciences: Medicine provides hands-on experience in analyzing high throughput molecular data for the diagnosis, prognosis, and treatment of monogenic or polygenic human diseases. The key concepts in this volume include risk factor assessment, genetic

tests and result interpretation, personalized medicine, and drug discovery. This volume is expected to train readers in both single and multi-dimensional biological analysis using open data sets, and provides a unique learning experience through clinical scenarios and case studies.

An Overview of TCI and TIVA was written by two pioneers in the field of targeted drug delivery in anesthesia. Despite its small size, this book is a rich source of information on the structure, function, and clinical applications of target-controlled infusion (TCI) systems. [...] The text has the appearance of class notes rather than a formal manual; however, this feature enhances the tutorial dynamics of the book and should attract individuals involved in learning such as anesthesia residents and specialists flirting with total intravenous anesthesia (TIVA).' - David O. Warner, editor of Anesthesiology. AUTHORS: Anthony Absolom is Professor of Anesthesia at the University of Groningen. Michel Struys is Professor on Anaesthesia at Ghent University and the Universal Medical Center Groningen and Director at the British Journal of Anaesthesia. 27 b/w images

Labour Ward Manual John Wiley & Sons

Labour Ward Manual, Second Edition provides guidelines for the application of obstetric knowledge to the labor ward environment. The practice of obstetrics is still an art and as such encompasses alternative approaches to achieve the same welcome end, the safety and wellbeing of both mother and child throughout labor and after delivery. The steps suggested for patient management and presentation concentrate on safety and simplicity. Throughout this book, it is stressed that the laboring woman and the fetus are the most important persons in the labor ward. This book clearly documents the emphasis on the atmosphere of ready redress by litigation; approach to women with individual needs; special care in the sensitive issue of induction; fetal monitoring; fluid replacement together with a clear protocol for management of fetal and maternal mishaps; and problems and hazards of women in the labor ward of hepatitis B or human immunodeficiency virus (AIDS) infection. This edition provides a clear concise guidance for all those involved in child birth.
