Steven Tadelis begins with a concise description of rational decision making, and goes on to discuss strategic and extensive form games with complete information, Bayesian games, and extensive form games with imperfect information. When the first hot-air balloons took to the air, the quest to build machines that could carry people safely across the skies captured the imagination of the world. It triggered a surge of daring and

ingenuity that saw technological barriers tumble, and by World War One, man was using aeroplanes in combat. Among these young men in their flying machines were Australians Richard Williams, Hudson Fysh, Ross and Keith Smith, Bert Hinkler and Charles Kingsford Smith, who would all become household names on their return home. From becoming the 'father of the RAAF' to winning the inaugural London to Australia air race, from founding Qantas to being the first to cross the Pacific Ocean, these were some of the men who placed Australia at the forefront of the aviation industry. AVIATION IN AUSTRALIA tells their stories but also looks at more recent events that have seen the demise of icons such as Ansett and the rise of new players in this most competitive of industries. This book is part of Exisle Publishing's Little Red Books series. Every title in the Little Red Books series provides an overview of key events, people or places in Australian history. They cover the essentials, bringing the reader up to speed on the most important, fascinating or intriguing facts. Appealing to everyone from students to pensioners who've always wanted to "know a bit about that", they're an essential part of every Australian bookshelf.

Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to: -Build an accurate threat model for your vehicle -Reverse engineer the CAN bus to fake engine signals -Exploit vulnerabilities in diagnostic and data-logging systems -Hack the ECU and other firmware and embedded systems -Feed exploits through infotainment and vehicle-to-vehicle communication systems -Override factory settings with performance-tuning techniques -Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

Ant Anstead's Building a Special brings the Haynes story full circle, coming 61 years after the original Building a 750 Special was written by John Haynes, Haynes Publishing's founder, when he was still a schoolboy. This book is a TV tie-in, following the 12-part TV series Ant Anstead Master Mechanic, aired on Motor Trend, part of the Discover Network in the US and UK, following Ant Anstead's build of his own-design 'special' car, taking inspiration from the Alfa 158 - the first World Championship-winning F1 car, which raced from the 1930s until the 1950s. The 12-part TV series followed Ant's build of the car, from the first design ideas, through the construction, culminating in the debut of the car during the 2019 US Grand Prix weekend in Austin, Texas. The book follows Ant's personal build of the car, from the selection of the donor MG TD for the chassis, and Alfa Romeo Spider for the engine and gearbox, through modifying the chassis, building the suspension, steering, brakes, bodywork and interior, and putting all the components together to produce a finished one-off 'special.' Content includes: Introduction The history of specials Planning Donor car Chassis, suspension, steering, rear axle Engine, fuel system, cooling system, ancillaries, exhaust Gearbox Bodywork Braking system Cockpit Wiring Preparation and painting Testing Setting up and Making road legal.
