course looks at the tools available to analyse the lithology and fluid content of a reservoir and how petrophysicists work with other disciplines to estimate hydrocarbon volumes in the subsurface. The course identifies the multiple data sources required for reservoir evaluation, emphasising integration of all available data, potential sources of error and uncertainty within the data. Petrophysics and Formation Evaluation (3 credit hours) This course covers the basic methods of open-hole well log analysis, and covers logging suite choices. New logging developments and current research are also covered. Special focus on certain methods is provided (e.g. 3D VSP, borehole imaging, pore pressure prediction). Course Outline. Introduction to petrophysics. Course Descriptions - University of Houston The course serves as an introduction on how to do a thorough, modern petrophysical evaluation systematically and on how to use the PetroDB-WEB service. Logs are interactively calibrated to rock-typed hard data to create a

uniquely powerful formation evaluation tool.
