A rollicking ride through the early days of Australian Motorsport set in 1900-1918 in Perth, Melbourne, Brisbane and the Gold Coast, the true story of bitter rivalry between two Brisbane car importers/dealers: E.G.Eager Son and Canada Cycle and Motor (CCM). There are four main characters: Fred Z. Eager, Alec Fraser Jewell, E.G.Eager and CCM managing director A.V.Dodwell. The paths of speedsters Fred Eager and Alec Jewell collide on Christmas Day, 1916, on Southport Beach at the first attempt to set an Australian land speed record. Whitey in the premier motorsport event of hill climbs so they decided to stage an event of their own, bespoke for Studebaker. This race would nullify Fred Eagers driving skills and suit the big-engined Studey: A straight line speed

contest against the clock on the firm low-tide sand of Southport (Surfers Paradise) beach. Only one of them could win ... Or could they?

Given widespread concern over the worldwide loss of biodiversity and popular crusades to "save" endangered species and habitats, why has the Endangered Species Act remained unauthorized since October 1992? In *Fate of the Wild* Bonnie B. Burgess offers an illuminating assembly of facts about biodiversity and straightforward analysis of the legislative stalemate surrounding the Endangered Species Act. *Fate of the Wild* surveys the history of and analyzes the conflict over the legislation itself, the heated issues regarding its enforcement, and the land-use and habitat battles

waged between conservationists, environmental activists, and private property proponents. Burgess's meticulous and exhaustive research makes *Fate of the Wild* a valuable resource for professionals in conservation biology, public policy, environmental law, and environmental organizations, while the narrative clarity of the book will appeal to anyone interested in the fate of nonhuman species. Burgess explains how wilderness has been consumed by concrete and asphalt, the effects of toxins on plants and animals, strip mine tailings, oil slicks, and smog. She exposes, as well, the "invisible" damage that manifests itself in the subtle degradation of natural systems and in the increased incidence and number of

diseases, the rise in human infertility, and the drastic alteration of weather patterns and landscapes. Fate of the Wild presents a factual and balanced discussion of the various sides of the contemporary debate over the Endangered Species Act, alongside the author's clearly stated position: We are overpopulating, polluting, and overdeveloping our environment, and as a species we have embarked on a crash course toward a sixth great extinction event on this Earth.

Chassis Engineering explains the complex principles of suspension geometry and chassis design in terms the novice can easily understand and apply to any project. Hundreds of photos and illustrations illustrate what it takes to

design, build, and tune the ultimate chassis for maximum cornering power on and off the track.
